REPORT OF THE DIRECTOR OF THE MINT

THOMAS D. BROWN

DIRECTOR OF THE MINT

Washington, D. C., September 15, 1917

For the purpose of the year ending with the 30th day of September of the fiscal year, I have the honor to submit herewith a report on the operations of the Mint and upon the work of the Mint Service for the fiscal year ended June 30, 1917. The report is divided into two parts, the first of which is the report on the operations of the Mint and the second is the report on the work of the Mint Service.

PART I.

REPORT OF THE DIRECTOR ON THE OPERATIONS OF THE MINT SERVICE FOR THE FISCAL YEAR 1917.

REPORT OF THE DIRECTOR OF THE MINT.

TREASURY DEPARTMENT,
BUREAU OF THE MINT,
Washington, D. C., September 15, 1917.

SIR: In compliance with the provisions of section 345, Revised Statutes of the United States, I have the honor to submit herewith a report covering the operations of the mints and assay offices of the United States for the fiscal year ended June 30, 1917, being the forty-fifth annual report of the Director of the Mint. There is also submitted for publication in connection therewith the annual report of this bureau upon the production and consumption of the precious metals in the United States for the calendar year 1916.

OPERATIONS OF THE MINTS AND ASSAY OFFICES.

A feature of the year was the unprecedented demand for coins of the smaller denominations. The coinage executed approached the half-billion mark in number of pieces, against approximately 155 million pieces in the previous year. This was the largest year's coinage in the history of the mint service. A large number of pieces, over 17 millions, were coined for foreign Governments.

The value of gold acquired by the mint service during the fiscal year was nearly a billion dollars—almost double that of the prior year, and more than six times the amount received in 1915.

I beg to suggest the advisability of recommending to Congress that a permanent indefinite appropriation be made for the purpose of providing alloy metals for gold and silver coinage. Under present conditions payment is made from the appropriation for contingent (general) expenses of the respective coinage mints, and in submitting requests for appropriations it is impracticable to estimate with any degree of accuracy the amount that will be drawn from the contingent funds for the purchase of metal for alloy.

It is further recommended that the necessary steps be taken to bring about legislation to increase the minor coinage metal fund from \$200,000 to \$400,000. We are now considerably embarrassed by lack of funds to pay for sufficient copper and nickel to operate the mints to full capacity on minor coins.

The regulation in force for many years as to the gold content of acceptable deposits has recently been so modified as to permit the minor offices to receive bullion containing not less than one part of gold in one thousand. This amendment has the effect of attracting to the smaller offices large amounts of bullion previously deflected to outside institutions.

In this connection I would urge the desirability of appropriations sufficiently large to permit the utilization of the minor offices in han-

ding a much larger volume of business. The activities of all of the assay offices should be increased. They can be made to serve a larger number of small producers of the precious metals and to be of much greater accommodation to the mining industry, and this at small expense to the Public Treasury. It is possible for the earnings of the smaller offices to be increased to the extent of making them largely self-supporting.

The most notable mechanical improvement in the service consisted of the installation of an electric furnace in the mint at Philadelphia to be used for the melting of minor-coinage metal. It is expected that an important saving of time and materials will result from this method of operating upon nickel and bronze.

The following mint service institutions were operated during the fiscal year 1917: Coinage mints at Philadelphia, San Francisco, and Denver; assay office at New York, which has a large trade in bars of fine gold and silver; mints at New Orleans and Carson City conducted as assay offices and assay offices at Seattle, Boise, Helena, Salt Lake City, and Deadwood, these being bullion-purchasing agencies for the large institutions. Refineries were operated at the New York, Denver, and San Francisco institutions.

The value of the gold acquired by the Government at the mints and assay offices during the fiscal year 1917 was \$907,962,397.15, the large increase over last year being due principally to the heavy importations of foreign coin; United States gold coin received for recoinage was of the value of \$1,906,888.84; transfers of gold between mint service offices totaled \$13,832,622.21, making an aggregate of gold handled by the mint service during the fiscal year 1917 of \$923,701,144.80.

Silver purchased during the fiscal year 1917 totaled 6,161,680.34 fine ounces, costing \$4,513,215.19, at an average price of 73 $\frac{1}{4}$ cents per fine ounce; the silver received and repaid to the depositors thereof in bars bearing the Government stamp totaled 4,610,396.06 fine ounces; the silver deposited by foreign Governments to be worked into coin totaled 811,754.81 fine ounces; the United States silver coin received for recoinage totaled 6,241,240.81 fine ounces, with recoinage value of \$8,627,946.34; the Philippine silver coins received for recoinage totaled 149,129.07 fine ounces; the transfers of silver between mint service offices totaled 1,231,661.15 fine ounces, making an aggregate quantity of silver handled by the mint service during the fiscal year 1917 of 19,205,677.21 fine ounces. The large increase over last year of silver handled was due principally to the extraordinary demand for subsidiary silver coin and to the placing in circulation of the new design subsidiary silver coins.

The United States coinage for the fiscal year 1917 amounted to \$25,445,148.68, of which \$1,230,040 was gold, \$18,263,600 was silver, \$3,816,496.70 was nickel, and \$2,135,011.98 was bronze. This amount includes \$30,040 in \$1 gold pieces struck at the Philadelphia Mint for the McKinley Memorial Association, and represents a total of 406,500,972 pieces.

There were also coined at the Philadelphia Mint 5,000 gold pieces for Costa Rica; 589,661 silver pieces for Colombia; 2,000,000 silver and 2,800,000 nickel pieces for Ecuador; 2,500,000 nickel pieces for Salvador; 100,000 silver and 800,000 nickel pieces for Panama;

1,170,000 bronze pieces for Nicaragua; 510,000 gold planchets and 600,449 silver planchets for Peru. The mint at San Francisco coined for the Philippine Islands 1,594,203 silver, 1,600,000 nickel, and 4,500,000 bronze pieces, a total of 18,769,313 pieces.

The seigniorage on United States coinage executed totaled \$10,478,-643.24, of which \$5,406,158.51 was on subsidiary silver coins and \$5,072,484.73 was on minor coins.

STOCK OF COIN AND BULLION IN THE UNITED STATES.

On June 30, 1917, the estimated stock of domestic coin in the United States was \$2,308,584,535, of which \$1,541,481,585 was gold, \$568,-270,061 was silver dollars, and \$198,832,889 was subsidiary silver coin.

The stock of gold bullion in the mints and assay offices on the same date was valued at \$1,550,357,982.76, an increase over last year of \$745,891,805.06, and the stock of silver bullion was 10,054,416.81 fine ounces, a decrease over last year of 780,757.07 fine ounces.

PRODUCTION OF GOLD AND SILVER.

The production of the precious metals in the United States during the calendar year 1916 was as follows: Gold, \$92,590,300, and silver, 74,414,802 fine ounces.

INDUSTRIAL ARTS.

The amount of gold consumed in the industrial arts during the calendar year 1916 was \$51,061,187, of which \$41,120,149 was new material. Silver consumed amounted to 32,103,507 fine ounces, of which 22,204,261 fine ounces was new material.

EXPORT OF GOLD COIN.

The net export of United States gold coin for the fiscal year ended June 30, 1917, was \$124,413,527.

ESTIMATES FOR THE FISCAL YEAR 1919.

The total of estimates for the mint service for the fiscal year 1919, including the office of the Director in Washington, is \$1,663,340, which compares with estimates of \$1,261,240 for the fiscal year 1918 and appropriations for the latter year of \$1,215,080.

APPROPRIATIONS, EXPENSES, AND INCOME.

The appropriated amounts available for the mint service use during the fiscal year 1917 totaled \$1,514,586.88, reimbursements to appropriations for services rendered amounted to \$82,054.39, making an available total of \$1,596,641.27.

The expenses chargeable to appropriations were \$1,547,344.85; those chargeable to income \$29,802.65; total, \$1,577,147.50.

The income realized by the Treasury from the mint service totaled \$11,439,873.37, of which \$10,478,643.24 was seigniorage.

Income and expenses are itemized as follows:

		INCOME.	
Earnings:			
Credited to appropriations—			
Charges on foreign coinage executed.....		\$69,897.96	
Charges for manufacture of special medals.....		2,722.28	
Charges for work done for other institutions, etc.....		9,447.65	
Total earnings credited to appropriations.....			\$82,067.89
Credited to revenues—			
Mint charges on bullion.....	504,417.98		
Proceeds of medals and proof coins sold.....	2,854.81		
Receipts from special assays of bullion and ores.....	3,332.75		
Total earnings credited to revenues.....			510,605.54
Total earnings.....			\$592,673.43
Profits:			
Gain on bullion shipments to refineries.....	\$458.15		
Less contra losses.....	174.79		
		283.36	
Surplus bullion recovered.....	112,814.21		
Proceeds of sale of by products (platinum, etc.).....	251,721.08		
Proceeds of sale of old materials.....	3,736.78		
Commission on telephone calls.....	1.27		
Total profits other than seigniorage.....			368,556.70
Seigniorage on subsidiary silver coinage.....	5,406,158.51		
Seigniorage on minor coinage—			
Nickel.....	3,414,426.30		
Bronze.....	1,658,058.43		
Total seigniorage.....			10,478,643.24
Total profits.....			10,847,199.94
Total income.....			11,439,873.37
		EXPENSES.	
Chargeable to appropriations:			
Compensation of employees, Mint Bureau, salaries appropriation.....		\$22,841.64	
Mints and assay offices, salaries appropriation.....		241,008.27	
Mints and assay offices, wages appropriations.....		847,611.84	
Total compensation of employees.....			\$1,111,461.75
Equipment, stores, and other expenses—			
Mint Bureau, contingent appropriation.....		5,055.48	
Mints and assay offices, contingent and permanent appropriations (including \$3,533.10 waste of gold and silver in operative departments, and \$6,036.64 loss on assay value of operative sweeps sold).....			419,169.50

Chargeable to appropriations—Contd.

Equipment, stores, and other expenses—Continued.

Transportation of bullion and coin between mints and assay offices, freight appropriation..

\$11,658.12

Total miscellaneous expenses chargeable to appropriations.....

\$435,883.10

Total expenses chargeable to appropriations.....

\$1,547,344.85

Chargeable to revenue:

Seigniorage on minor coinage—

Expenses of distributing minor coin to Treasury offices.....

23,381.14

Wastage of minor metals in operative departments.....

6,421.51

Total chargeable to revenue.....

29,802.65

Total expenses.....

1,577,147.50

Net income of the Government from the mint service.....

9,862,725.87

Total.....

11,439,873.37

DEPOSITS, INCOME, EXPENSES, AND EMPLOYEES BY INSTITUTIONS.

The number and value of deposits, the income (including seigniorage), and the expenses, of the fiscal year 1917, and the number of employees on June 30, 1917, at each institution, are given below:

Institution.	Number of—		United States coining value of gold and silver received at each institution.	Income.	Expenses. ¹	Transportation of bullion and coin.	Employees, June 30, 1917.

¹ Includes transportation of bullion and coin between mints and assay offices.

COINAGE DURING THE FISCAL YEAR.

The amount of domestic coin produced during the fiscal year 1917 was 406,500,972 pieces of the face value of \$25,445,148.68.

The gold coinage was \$1,230,040, which includes \$30,040 in McKinley gold dollars authorized under the act of Congress of February 23, 1916. The silver coinage consisted of 116,399,800 pieces of the face value of \$18,263,600, which includes \$13,750,400 in value of silver coins of the new design. The minor coinage executed totaled 289,831,132 pieces of nickel and bronze of the face value of \$5,951,508.68.

The following statement shows the domestic coinage in detail:

Denominations.	Philadelphia.		San Francisco.	
	Pieces.	Value.	Pieces.	Value.

MODIFICATION OF THE NEW-DESIGN SILVER QUARTER DOLLAR.

Under act of Congress approved July 9, 1917, the recently adopted design for the quarter dollar has been modified slightly for the purpose of increasing its artistic merit; the law referred to may be found in this document under "Monetary legislation."

Coins conforming to the modified design are now being issued; illustration faces this page.

DEPOSITS OF FOREIGN GOLD BULLION AND COIN.

Foreign gold bullion containing 27,643,796 fine ounces, of the value of \$571,447,979, and foreign gold coin, containing 6,003,900 fine ounces, of the value of \$124,111,627, was deposited and received from the following countries during the fiscal year ending June 30, 1917:

¹ Deduct \$42.69 value of old coins melted at San Francisco and Denver Mints, for the net amount issued and outstanding, \$72,793,650.63.

The uncurrent minor coins melted at each mint are not necessarily those of former coinage of the same mint.

OPERATIONS OF THE MELTING AND REFINING AND OF THE COINING DEPARTMENTS, FISCAL YEAR 1917.

The aggregate quantity of metals operated upon in the above-mentioned departments of the coinage mints, and assay office at New York during the fiscal year ended June 30, 1917, was 39,975,678.352 fine ounces of gold and 61,212,698.96 fine ounces of silver. There were also operated upon at the coinage mints 121,554,841.33 ounces of minor coinage metal. The figures in the table following are based on the actual figures obtained at the settlements of the accounts.

Legal limits of wastage on the whole amount delivered by the superintendent to operative officers, as prescribed in section 3542, Revised Statutes, is as follows: Melter and refiner—gold, 0.001; silver, 0.0015. Coiner—Gold, 0.0005; silver, 0.001.

GOLD BULLION.

Institution and department.	Amount received.	Amount returned.	Amount operated upon.	Legal allowance of wastage on amount received.	Actual surplus.	Actual wastage.	Wastage per 1,000 ounces operated upon.	Percentage of good coin produced to amount operated upon.

WASTAGE AND LOSS ON SALE OF SWEEPS.

The value of metals wasted in the operative departments during the fiscal year ended June 30, 1917, was \$9,954.61. A loss of \$6,036.64 occurred from the difference between the assay value of the bullion contained in sweeps sold and the amount received for the same; details are given below:

Items.	Mint at—			Assay office at New York.	Total.
	Philadelphia.	San Francisco.	Denver.		
Gold wastage, coining department.....			\$0.93		\$0.93
Silver wastage:					
Melting and refining department.....		\$1,114.88	312.32		1,427.20
Coining department.....	\$1,039.75	506.47	558.75		2,104.97
Nickel wastage:					
Melting and refining department.....	1,315.78	464.41	243.14		2,023.33
Coining department.....	461.22	91.59	35.27		588.08
Bronze wastage:					
Melting and refining department.....	1,899.71	614.31	796.07		3,310.09
Coining department.....	351.20	56.62	92.19		500.01
Loss on sale of sweeps.....	601.87	176.51	1,006.12	\$4,252.14	6,036.64
Total wastage and loss.....	5,669.53	3,024.79	3,044.79	4,252.14	15,991.25
Reimbursement:					
Nickel and bronze wastage from minor coinage profits.....	4,027.91	1,226.93	1,166.67		6,421.51
Other wastage and loss on sweeps from contingent appropriation.....	1,641.62	1,797.86	1,878.12	4,252.14	9,569.74

BULLION GAINS AND LOSSES.

The net gains from operations on bullion during the fiscal year 1917 amounted to \$355,248.91, as follows:

Items.	Mint at—			Assay office at New York.	Minor assay offices.	Total.
	Philadelphia.	San Francisco.	Denver.			
Recovered from refining and coining operations.....	\$23,006.58	\$7,860.44	\$254.85	\$37,018.05		\$68,139.92
Recovered incident to receipt of deposits.....	4,941.47	2,558.67	1,728.71	30,759.88	\$4,508.81	44,497.54
Net gain on shipments to Government refiners.....					283.36	283.36
Gain on light weight and mutilated coin purchased for recoinage.....	84.94	22.53		69.28		176.75
Receipts from sale of by-products.....		34,947.98	488.41	216,284.69		251,721.08
Total gains.....	28,032.99	45,389.62	2,471.97	284,131.90	4,792.17	364,818.65
Wasted in refining and coining operations.....	1,039.75	1,621.35	872.00			3,533.10
Loss on assay value of operative sweeps sold.....	601.87	176.51	1,006.12	4,252.14		6,036.64
Total losses.....	1,641.62	1,797.86	1,878.12	4,252.14		9,569.74

STANDARD SILVER DOLLARS USED IN SUBSIDIARY SILVER COINAGE.

There were purchased as bullion and melted at the mints and assay offices 961 mutilated silver dollars during the fiscal year ended June 30, 1917, which were used in the manufacture of subsidiary silver coin.

The following have been used since 1883:

Fiscal years.	Amount.	Fiscal years.	Amount.	Fiscal years.	Amount.	Fiscal years.	Amount.
1883.....	\$621	1892.....	\$42,881	1901.....	\$1,786	1910.....	\$961

1908.....	1,162,982.06	1,086,691.94	76,290.12
1909.....	977,321.23	912,300.40	65,020.83
1910.....	814,361.57	758,695.55	55,666.02
1911.....	583,538.44	544,539.09	38,999.35
1912.....	678,457.94	634,101.94	44,356.00
1913.....	414,035.30	388,026.37	26,008.93
1914.....	875,727.40	815,800.49	59,926.91
1915.....	730,337.82	678,791.95	51,545.87
1916.....	848,565.65	787,295.44	61,270.21
1917.....	8,849,678.05	8,627,860.04	221,818.01
Total.....	88,432,848.24	84,263,830.79	4,169,017.45

The loss on the recoinage of \$1,922,032 in worn and uncurrent gold coins was \$15,143.16, and the loss on the recoinage of \$8,849,678.05 in worn and uncurrent silver coins was \$221,818.01.

The Treasury was reimbursed from the appropriation for that purpose the following losses on uncurrent coin transferred during the fiscal year 1917 for recoinage:

Uncurrent gold coins.....	\$2,704.84
Uncurrent silver coins.....	221,708.93
Uncurrent minor coins.....	9,999.85
Total.....	234,413.62

¹ Of this amount \$116.95 belonging to 1916 was paid in May, 1917.

LABORATORY OF THE BUREAU OF THE MINT.

From the domestic coinage of the calendar year 1916 the assayer of this bureau tested 78 gold and 302 silver coins, all of which were found within the legal requirements as to weight and fineness.

In the gold coins the greatest deviation above standard in fineness (the legal limit being 1 above or below) was 0.3, while the greatest deviation below was 0.5.

The greatest deviation in fineness of silver coins above standard (the limit being three above or below) was 1.3, while the greatest deviation below was 0.9.

The following table and statement summarizes these assays:

Fineness.	Number of coins.							
	Philadelphia.		San Francisco.		Denver.		Total.	
	Gold.	Silver.	Gold.	Silver.	Gold.	Silver.	Gold.	Silver.
899.1.....		3		1		1		5
.3.....		13		3		7		23

.7.....		7		7		2		16
.9.....		5		3		1		9
901.1.....		1				1		2
.3.....				1				1
Total.....	4	156	74	94		52	78	302
Average.....	899.500	900.009	899.875	900.098		899.946	899.874	900.026

Twelve Philippine coins were examined, all of which were within the legal requirements. The examination of certificate bars was continued throughout the year, a varying number of samples from 421 melts having been assayed. In the extended examination into our assaying methods, now going on, it was shown that while standard gold does not often segregate when cast into coin ingots, yet, when cast into the larger certificate bars, it does show appreciable segregation, and chip samples from a melt may average 0.1 in fineness below the granulations.

PROCEEDINGS OF THE ASSAY COMMISSION, 1917.

The following-named gentlemen were designated by the President as commissioners to examine and test the weight and fineness of the coins reserved at the several mints during the calendar year 1916, pursuant to the provisions of section 3547 of the Revised Statutes of the United States: Hon. Victor Murdock, Wichita, Kans.; Mr. Ole Hanson, Seattle, Wash.; Mr. Thomas B. Love, Dallas, Tex.; Mr. Verner Z. Reed, Denver, Colo.; Mr. G. R. DeSeussure, Jacksonville, Fla.; Mr. Duncan Gibson, Lexington, Ky.; Mr. E. D. Morcum, Sioux Falls, S. Dak.; Mr. Miller S. Bell, Milledgeville, Ga.; Dr. Marcus

Benjamin, Washington, D. C.; Hon. William A. Ashbrook, M. C.; Mr. H. O. Granberg, Oshkosh, Wis.; Mr. Thomas Arthur, Billings, Mont.; Mr. Richard Lloyd Jones, Madison, Wis.; Mr. L. A. Fischer, Bureau of Standards; Mr. William Shafroth, Denver, Colo.; Hon. John Skelton Williams, Comptroller of the Currency (ex officio); Mr. George R. Comings, United States Assay Office, New York (ex officio).

The commission met at the mint at Philadelphia Wednesday, February 14, 1917, and Mr. L. A. Fischer was elected chairman.

The following committees were appointed by the chairman, with the approval of the commission:

Committee on counting.—Mr. Bell, chairman; Mr. Granberg.

Committee on weighing.—Dr. Benjamin, chairman; Mr. Gibson.

Committee on assaying.—Mr. Comings, chairman; Messrs. Morcom and Shafroth.

Committee on resolutions.—Mr. Morcom, chairman; Messrs. Bell and Granberg.

The committee on counting reported that the packages containing the pieces reserved by the mints at Philadelphia, San Francisco, and Denver for the annual trial of coins, in accordance with section 3539 of the Revised Statutes, were delivered to the committee by the superintendent of the mint at Philadelphia and compared with the records kept by the Director of the Mint, packages from each mint for each month's coinage and containing all denominations coined having been selected, accurately counted, and found to be correct. The verification of the packages being completed, they were delivered to the committees on weighing and assaying. In the reports of those committees will be found an account of the disposition of these coins.

The table following gives the packages verified by the committee on counting, being the total number of coins reserved by the several mints:

Mints.	Gold.		Silver.	
	Pieces.	Value.	Pieces.	Value.
Philadelphia.....	22	\$22.00	21,179	\$2,398.00
San Francisco.....	1,185	18,510.00	8,389	940.50
Denver.....			3,912	1,085.20
Total, United States.....	1,207	18,532.00	33,480	4,423.70
San Francisco, Philippine coinage.....			718	143.60

The committee on weighing reported that they had examined certain sample coins selected at random from those reserved for the annual trial by the Assay Commission. The weighings, as usual, were made on the Troemner balance provided for the purpose by the mint. It was carefully examined as to the equality of the arms and as to its sensibility, both of which were found to be satisfactory.

The weights employed for testing the United States coins, from the dime to the double eagle, were a set of coin weights furnished by the Director of the Bureau of Standards, with a certificate giving the variation in mass from the standards fixed by law.

The weights used for testing the Philippine coins were a set of grain weights belonging to the Philadelphia Mint, which were checked by the committee by comparison with the coin weights referred to

above. All weighings of coins were made to the nearest one-hundredth grain.

Solely for the purpose of checking the adjustment of the working standards of the mint, the following intercomparisons were made:

500 ounces = 400 ounces + 100 ounces + 0.0015 ounce; 500 ounces = 300 ounces + 200 ounces + 0.0012 ounce; 400 ounces = 300 ounces + 100 ounces + 0.0002 ounce; 300 ounces = 200 ounces + 100 ounces - 0.0000 ounce; 200 ounces = 100 ounces + 50 ounces + 40 ounces + 10 ounces + 0.0001 ounce; 200 ounces = 100 ounces + 50 ounces + 30 ounces + 20 ounces - 0.0001 ounce; 100 ounces = 50 ounces + 30 ounces + 20 ounces - 0.0000 ounce; 50 ounces = 30 ounces + 20 ounces - 0.0000 ounce; 30 ounces = 20 ounces + 10 ounces - 0.0000 ounce; 20 ounces = 10 ounces + 5 ounces + 3 ounces + 2 ounces - 0.0001 ounce; 20 ounces = 10 ounces + 5 ounces + 4 ounces + 1 ounce - 0.0000 ounce; 10 ounces = 5 ounces + 4 ounces + 1 ounce - 0.0001 ounce; 5 ounces = 4 ounces + 1 ounce - 0.0000 ounce.

The committee on assaying reported that they had taken samples from the coins reserved from the United States mints at Philadelphia, San Francisco, and Denver for assay.

The results of the assays made of the individual coins and of the same in mass are given in the following schedules. From these it will be seen that—

The highest assays upon the gold coinage of the different mints (the limit of tolerance being one one-thousandth) are at—

Philadelphia.....	900.0
San Francisco.....	900.0

The lowest assays upon the gold coinage (the limit of tolerance being one one-thousandth) are at—

Philadelphia.....	899.9
San Francisco.....	899.7

The highest assays upon the silver coinage of the different mints (the limit of tolerance being three one-thousandths) are at—

Philadelphia.....	900.2
San Francisco.....	900.4
Denver.....	900.4

The lowest assays upon the silver coinage of the different mints (the limit of tolerance being three one-thousandths) are at—

Philadelphia.....	899.1
San Francisco.....	899.1
Denver.....	898.9

The highest and lowest assays upon the Philippine silver coinage at San Francisco are 750 and 748.8.

The committee has tested the quartation silver and found it to be free from gold. The acid used in the humid assay of silver was tested and found to contain only a trace of chlorine. The lead foil contained only a trace of silver.

The balances used were also tested and found to be correct and the committee deem the assays exhibited in the above schedules to be entirely correct, the mass melt of the Denver coins having been checked by additional assays.

The following report, submitted by the committee on resolutions, was unanimously adopted:

Whereas the Annual Assay Commission appointed by the President of the United States to examine and test the weight and fineness of the gold and silver coins reserved by the different mints of the United States has held its meeting in the city of Philadelphia on February 14 and 15, 1917; and

Whereas the commission has about completed its labors, the committee on resolutions begs leave to offer the following resolutions:

First. That the commission renews the recommendations of prior commissions with reference to the maintenance and increase of the national coin collection of the mint at Philadelphia.

Second. That in the opinion of the commission, in order to facilitate this work, an official souvenir mint medal of typical and characteristic design should be struck off and a descriptive booklet of the mint published to be sold at a moderate price to visitors at the mint; that the proceeds from such sales be devoted exclusively, under the supervision of the Secretary of the Treasury, to the extension of this national collection of coins and medals at the Philadelphia mint, as aforesaid.

Third. That in the opinion of the commission there should be an annual appropriation by Congress of \$10,000 for the purpose of acquiring rare coins of great historical value not now in the possession of the mint collection, with the ultimate object of completing the specimens to include the types and patterns, denominations and varieties struck by each of the United States mints, as well as the gold and silver coins and ingots struck by private mints before the United States mints were established, to more fully foster and preserve the history and art of the ideal and heroic acts portrayed in the coins, medals, and currency of the United States, past and present.

Fourth. That a letter be written under the hand of the chairman of this commission to the Secretary of the Treasury, recommending to him that the above amount be included in the annual estimates for purposes aforesaid, and further suggesting that he recommend to Congress the desirability of authorizing the mint medal and descriptive booklet referred to herein; and be it further

Resolved, That the Assay Commission of 1917 recommends that the Director of the Mint consider the advisability of using the metric system of weights and measures in operation of the several mints.

The commission desires to express its regret at the absence, on the second day of the meeting, of Mr. J. B. Eckfeldt, the assayer, owing to illness, as it is the first time in 52 years that this worthy mint official has been absent.

Resolved, That the thanks of the commission be and are hereby heartily tendered to Hon. F. J. H. von Engelken, Director of the Mint; Hon. A. M. Joyce, Superintendent of the Mint; Mr. L. A. Fischer, of the Bureau of Standards; and to Mrs. Virginia H. Carpenter and to various other officials and employees of the mint for the uniform courtesy shown the commission during its sessions.

Respectfully submitted.

E. D. MORCOM, *Chairman*.
H. O. GRANBERG.
MILLER S. BELL.

In presenting their respective reports, Dr. Benjamin, chairman of the committee on weighing, and Mr. Comings, chairman of the committee on assaying, each expressed his pleasure in stating that the tests made of the 1916 coinage had shown unusually good work of the several mints during the year.

MINT OF THE UNITED STATES AT PHILADELPHIA.

The mint was operated throughout the fiscal year. There were received 7,016 original deposits purchased, 269 redeposits purchased, and 289 silver deposits (payable in fine bars); redeposits (transfers) 693, and 1,940 refinery bars (Treasury purchases), and 816 deposits in trust. Total, 11,023.

Items.	Gold.		Silver.	
	Fine ounces.	Value.	Fine ounces.	Cost value.
Original deposits purchased.....	8,773,951.007	\$181,373,664.24	2,485,329.04	\$1,846,587.39
Redeposits purchased.....	1,489,553.247	30,791,798.38	2,982.00	2,058.79

MELTING AND REFINING DEPARTMENT.

During the fiscal year this department received gold bullion containing by assay 1,496,136.987 fine ounces having a coinage value of \$30,927,896.37. The amount of silver bullion received contained 16,936,175.39 fine ounces, having a coinage value of \$23,412,718.70. Upon settlement of the accounts of this department there was found a gain in both the gold and silver bullion. In the gold account the surplus amounted to 1,035.270 fine ounces, having a coinage value of \$21,400.93. In the silver account the surplus amounted to 1,036.81 fine ounces, having a coinage value of \$1,433.30.

The ingots returned during the fiscal year were as follows:

Gold.....	fine ounces..	781,044. 96
Silver.....	do.....	14,981,018. 31
Nickel.....	troy ounces..	17,605,246. 70
Bronze.....	do.....	25,908,132. 50

The number of ingot melts made and amount of metal sent to the melting room are shown by table given below:

Ingot melts made.

Metal.	Number made.	Ounces melted.	Condemned.
Gold.....	151	890,898. 61	1
Silver.....	4,255	15,608,685. 58	3
Nickel.....	4,531	18,997,933. 80	
Bronze.....	7,518	26,355,284. 33	
Total.....	16,455	61,852,802. 32	4

Total.....	105, 892	131, 857. 05

The heavy demand for silver and minor coins that began early in the calendar year 1916 made it necessary to employ extra men and this larger force started upon overtime in March, 1916, from two to four hours per diem.

A gas combustion furnace of the open flame and tilting type has been tried for melting our minor coinage metal ingots, but absolutely without success on cupro nickel. The showing on bronze was promising, and further tests are to be made under lower pressures in an effort to melt successfully both cupro nickel and bronze. In the meantime an electric tilting furnace of the arc type is being tested on cupro nickel melting; the tests, while not complete, give every evidence of entire success in this method of melting.

COINING DEPARTMENT.

The coinage for the fiscal year ended June 30, 1917, was the largest in the history of the institution; 285,646,172 pieces of domestic coin, consisting of McKinley memorial gold dollars, half and quarter dollars, dimes, 5 and 1 cent pieces, of the value of \$14,680,118.68 were coined. In addition to the United States coinage, there were manufactured for Costa Rica, Colombia, Ecuador, Panama, Salvador, Nicaragua, and Peru 11,075,110 pieces of coin and blanks, making a grand total of 296,721,282 pieces, an excess of nearly 100,000,000 pieces over any previous year.

The metal operated upon totaled 2,007 tons.

The net wastage on this vast coinage amounted to only \$918.84.

In order to meet the unprecedented demand for subsidiary silver and minor coin, and to execute the foreign coinage, the working force was largely increased and two shifts of 12 hours each were worked during a portion of the time.

During this year the silver coinage was all of the new designs except \$447,000 in quarter dollars and \$1,849,000 in dimes.

Further coinage details will be found in tabulations elsewhere in this document.

PROOF COINS AND MEDALS.

The following table shows the number of proof coins and medals, and their nominal value, sold during the fiscal year 1917:

Articles.	Pieces.	Nominal value.
Gold medals.....	265	\$6,185.77
Silver medals.....	428	968.51
Bronze medals.....	20,604	4,177.72
Minor proof coins.....	939	27.99
Total.....	22,236	11,359.99

ENGRAVING DEPARTMENT.

Charles E. Barber, engraver of the mint from the year 1880, when he succeeded his father, William E. Barber, died January 18, 1917. He entered the mint service in 1869 as assistant to his father.

George T. Morgan, assistant engraver, was commissioned engraver to succeed Mr. Barber on April 10, 1917.

All the dies used in coining operations in all the mints are made in the engraving department at the Philadelphia Mint. The embossed-envelope dies used by contractors supplying stamped envelopes for the Post Office Department and postal-savings bank are also made here; also dies for the Army and Navy and other authorized medals. The mint is reimbursed for the actual expenditures for labor and materials on these medal accounts.

The number of dies prepared for United States coinage during the year was 7,037. In addition 145 were made for Philippine coinage, 18 for the Government of Colombia, 4 for the Government of Costa Rica, 109 for the Government of Cuba, 175 for the Government of Ecuador, 26 for the Government of Nicaragua, 30 for the Government of Panama, 89 for the Government of Salvador, 341 for the Post Office Department, 9 for medals, and 117 master dies and hubs; in all 8,100, as follows:

MACHINE SHOP.

In addition to the regular repairs and upkeep of the machinery and appliances, the following new work was done for this mint: 3-foot fine bullion balance, 6 complete sets of bronze and nickel molds, 2 turntables, 60 gold certificate bar molds, 6 automatic hopper coin feeders, 421 coin collars of various denominations, 3 sets double-eagle sectional gold collars, 3 sets eagle sectional gold collars, and 4 punches and beds for nickel coinage; 2 ten-beam automatic weighing machines are about 70 per cent completed. The blower system has been rearranged in one central plant in the basement. A 750-pound Rennerfelt electric furnace for melting bronze and nickel has been installed; 3 cutting presses and 2 rolling mills are also under construction for the minor coinage plant.

There were manufactured for the mint of the United States at San Francisco, 12 half-dollar collars, 18 quarter-dollar collars, 20 dime collars, 20 nickel collars, 6 one-cent collars, and 20 Philippine coin collars, ten-beam automatic weighing machine, 3 sets of weights for all dominations of coins, 2 sets of dressing tools and 2 sets of steel gauges for all denominations of coins for upsetting machine, 3 dime, 2 nickel, and 3 one-cent feeders, disks and tubes for automatic hopper coin feed, and repair parts automatic weighing machine.

For the mint of the United States at Denver there were manufactured 18 dime collars, 24 nickel collars, and 18 one-cent collars.

For foreign Governments the following work was done:

Cuba: Four-beam automatic weighing machine, 3 sets of weights for all denominations of coin, 3 brass weights for \$1,000 in gold and silver, set of maximum and minimum weights for gold and silver, hand balance.

Ecuador: Collars, punches, and beds for coinage.

Nicaragua: Collars, punches, and beds for coinage.

Peru: Punches, collars, weights, and 6 nurls.

Salvador: Collars, punches, and beds for coinage.

EMPLOYEES.

The total number of employees in this institution at the close of the fiscal year was 342, distributed in the several departments as follows:

General.....	150
Coining.....	118
Melting and refining.....	57
Assayer's.....	11
Engraver's.....	6
	342

VISITORS.

There were 47,143 visitors shown through the mint prior to February 3, 1917, when visiting was prohibited by order of the department.

THE PROGRESS OF THE NUMISMATIC COLLECTION.

For the fiscal year ended June 30, 1917, the accessions to the numismatic collection amounted to 359 specimens, consisting of 85 coins, 175 tokens, and 99 medals. The distribution of these specimens according to metals and period of origin is as follows:

As to metals:	
Coins—	
Gold.....	14
Silver.....	42
Bronze.....	21
Nickel.....	8
Tokens—

Modern.....	95
Medals—	
All specimens acquired are modern.	

MINT OF THE UNITED STATES AT SAN FRANCISCO.

The San Francisco Mint was operated throughout the fiscal year ended June 30, 1917, with augmented force and on overtime for several months on account of the heavy demand for small coin. The refinery operated but five months of the year.

During the fiscal year the mint received 13,701 gold and silver deposits, also 33 redeposits from the Carson Mint, containing 4,924,992.552 fine ounces of gold of the value of \$101,808,631.47, and 5,047,931.69 fine ounces of silver at a subsidiary coinage value of \$6,978,305.39. The details covering classification of bullion and sources of origin are set out in table appearing in another part of this report.

BARS MANUFACTURED AND ISSUED DURING THE FISCAL YEAR.

During the fiscal year gold and silver bars were manufactured as follows:

Character of bars.	Number.	Fine ounces.	Value.
Gold:			
Certificate.....	5,795	3,649,911.893	\$75,450,375.05

Assaying department.....	11
Total.....	138

Other operative details will be found elsewhere in this document in tabulated statements.

MINT OF THE UNITED STATES, AT DENVER, COLO.

The Denver Mint was operated to full capacity on silver and minor coin during the fiscal year 1917, working double time for about five months.

During the fiscal year 1917 this mint received 3,990 deposits of gold and silver from private parties and 1,269 redeposits from other offices containing 1,543,013.551 fine ounces of gold of the value of \$31,896,-913.81 and 1,719,316.02 fine ounces of silver having subsidiary coinage value of \$2,376,797.67.

The coin shipments were very heavy and made to most of the important cities from Boston to San Francisco.

ASSAY DEPARTMENT.

During the fiscal year 1917 the operations of the assay department were as follows:

Items.	Samples.	Assays.	Reports.
Deposits.....	8,072	22,059	4,000
Redeposits.....	2,806	5,995	1,290
Refinery.....	4,114	9,956	1,569
Ingot making.....	3,389	7,554	1,130
Sweeps, cellar.....	71	320	57
Bureau of the Mint.....	539	1,637	539
Bullion assays.....	13	21	6
Special assays.....	198	470	99
Coining department.....	1,107	1,139	1,106
Total.....	20,289	49,151	9,796

The deposits represent 4,000 melts of gold and silver; redeposits, 1,290 melts; refinery samples, 182 melts of fine gold, 291 melts of fine silver, 55 melts of gold anodes, 475 melts of silver anodes, and 513 experimental anode melts; also 1,109 melts of silver ingots, the remainder being miscellaneous samples for special assays. The average cupel absorption for the year was—gold, 0.64 gold weight; silver, 3.83 gold weight.

Reported assays made.....	49,151
Cupels made.....	28,505
Pieces of lead cut and rolled.....	39,916

Fineness of coinage ingots and other refined metal.

¹ Included in above refinery total but unsold June 30, 1917.

Gold bars paid to depositors during fiscal year 1917: \$36,066.02 = 1,744.694 fine ounces, fine bars, in exchange; \$146.96 = 7.109 fine ounces, unparted gold bars.

On June 30 officers and employees numbered 90, divided by departments as follows: General, 41; assay, 7; coining, 18; melting and refining, 24.

Other operative details will be found elsewhere in this document in tabulated statements.

UNITED STATES ASSAY OFFICE AT NEW YORK, N. Y.

The unusual conditions which have prevailed at the United States assay office at New York since the war (1914) have continued to such a great extent that during the fiscal year 1917 just ended the office has transacted a business that is not only unprecedented in the history of the office, but which nearly doubled the amount of business for the year 1916, which in itself was more than five times greater than for any year previous to 1913.

The total value of the deposits that have passed through the office during the year was \$565,938,776.37. This is an increase of \$242,566,380.87 over the total deposits for the previous year.

The total number of deposits received, running in value from \$100 to \$50,000,000 per deposit, was 19,899, an increase of 2,529 over the previous year.

Notwithstanding the fact that exportation of gold bars issued in exchange for gold coin showed a decrease of \$4,044,497.08, the total amount of gold bars thus exchanged was \$2,147,402.50 more than the total for the preceding year; the increase over last year of bars paid in exchange for gold coin for *domestic* use being \$6,191,899.58.

The following comparative figures illustrate the enormous growth in the deposits made at this office:

The calendar year 1914 represents a normal year under ante bellum conditions. During that year there was received gold deposits to the value of \$57,329,310.63, whereas the gold deposits for the present year were \$562,921,648.50, an increase of almost 1,000 per cent. The gold deposits for the month of *March, 1917*, alone, amounted to \$77,355,272.83, which exceeded the total deposits for the year 1914 by over \$20,000,000.

CASHIER'S OFFICE.

Gold bars were issued to depositors for domestic use in payment for bullion for \$48,954,104.48, which was \$45,679,224.86 increase over previous year. Gold bars were exchanged for gold coin for domestic use for \$40,274,779.82 an increase of \$6,191,899.58 over last year.

Gold bars were exchanged for gold coin for export for \$3,170,386.54. The charges collected on gold bars exchanged for gold coin amounted to \$22,723.21, an increase of \$1,186.51 over last year.

The total revenues of the Government from the office for the year have amounted to \$546,745.37, which shows an increase of \$136,819.33 over the previous year.

The total appropriations available for the support of this institution for the year amounted to \$299,490.63, so that the revenues exceeded the expenses by \$247,254.74, plus any unexpended balances of the amounts appropriated.

By-products.

Items.	Sold during year.	On hand June 30, 1917.
	<i>Ounces.</i>	<i>Ounces.</i>
Platinum in sweeps.....	138.082	
Platinum, refinery.....	2,061.500	2,500

Iridium.....		125

At the present market prices the value of by-products on hand June 30 exceeds \$300,000.

ASSAY DEPARTMENT.

Again the increase in the year's operations has been so great that the department has been under constant strain to perform accurately and expeditiously the necessary work. The number of assays made has been over 28 per cent more than last year and over 54 per cent greater than the year before.

There were 196,729 assays made upon 63,509 samples, divided as follows:

Items.	Samples.	Assays.	Reports.
Deposits and redeposits.....	55,298	172,946	19,987
Refinery.....	7,271	19,557	2,867
Specials.....	905	4,134	445
Sundries.....	35	90	15
Total.....	63,509	196,727	23,314

The deposits and redeposits represent 19,899 melts of gold and silver, while the refinery samples cover 395 melts of fine gold, 740 melts fine silver, 415 melts gold anodes and 1,085 melts silver anodes and retreats, the other assays for the refinery being miscellaneous samples, settlement melts, and sweeps.

The special assays were, as usual, largely upon manufacturers' samples and articles of jewelry and plate.

The average cost for the year, including all classes, was \$0.1739 per assay. The department made all cupels used, numbering about 160,000, and also the silver disks used in parting.

OFFICERS AND EMPLOYEES.

The number of officers and employees at this office at the close of the fiscal year was as follows—

General department.....	77
Assay department.....	18
Melting and refining department.....	42
Total.....	137

an increase of 34 men over last year.

MINTS AT NEW ORLEANS AND CARSON, AND ASSAY OFFICES AT BOISE, HELENA, DEADWOOD, SEATTLE, AND SALT LAKE CITY.

These offices were open throughout the fiscal year 1917, as usual, for receipt of deposits of bullion.

The policy adopted in 1915 of extending the usefulness of these offices to the mining industry by reducing the charges for ore assays to a nominal sum, has considerably increased such business, as will be observed from the following comparative statement:

Fiscal year.	Ore assays made.	Amount of charges collected.
1915.		
1916.	1,404	\$885.65
1917.	2,318	1,478.00
	2,842	1,931.75

The following table exhibits the principal work of the minor assay offices:

Hon R. W. Woolley retired from the position of Director of the Mint July 15, 1916, and was succeeded by Hon. F. J. H. von Engelken on September 20, 1916. Mr. von Engelken resigned February 20, 1917. The present incumbent assumed the duties of Director of the Mint March 19, 1917.

The foregoing report, covering the operations of the mints and assay offices of the United States for the fiscal year ended June 30, 1917, is respectfully submitted.

RAY. T. BAKER,
Director of the Mint.

Hon. WILLIAM G. MCADOO,
Secretary of the Treasury.

PART II.

REPORT OF THE DIRECTOR OF THE MINT ON THE PRODUCTION AND CONSUMPTION OF GOLD AND SILVER IN THE UNITED STATES DURING THE CALENDAR YEAR 1916

REPORT ON THE PRODUCTION AND CONSUMPTION OF GOLD AND SILVER IN THE UNITED STATES DURING THE CALENDAR YEAR 1916.

The official estimate of the production of gold and silver in the United States is made by the Bureau of the Mint and the Geological Survey working in conjunction, the latter making a mine canvass in each State and the former working backward from mint deposits through refineries, smelters, and other reduction works to the figures of the mine production made by the survey. The two systems thus verify and support each other.

The gold production of the United States, including its insular dependencies, for the calendar year 1916 is estimated to have been \$92,590,300, and the production of silver is estimated at 74,414,802 fine ounces. A comparison of these figures with those for 1915 indicates decrease of production of both gold and silver, the former by approximately 8.5 million dollars and the latter by approximately a half million ounces.

Most of the States, as well as Alaska, which produce largely of gold, show decreases for 1916, Colorado's reduction being 3.3 million and Nevada's 2.8 million dollars. Many of the silver-producing States show increase of production during 1916, the largest, approximately 1,000,000 ounces, being credited to Arizona. The largest silver decrease is about 1.5 million ounces in Idaho.

A brief review of mining conditions in each State follows, for which acknowledgment is made to the Geological Survey:

ALASKA.

The stimulation felt by the mining industry of Alaska in 1915 did not lose its effect in 1916 and resulted in a greatly increased mineral production. Although this was most notable in copper, it was also seen in the increased value of the production of gold and silver, which amounted to a little more than \$900,000. This increase was the result of an increased production of gold from placers, as the quantity of gold and silver obtained from lode mines decreased. The production of gold and silver (mainly from deep mines in the Juneau district) in southeastern Alaska, from which nearly one-third of the Alaskan output is derived, did not vary much from that of 1915. There was, however, a decreased production of gold and silver from lode mines in the Fairbanks district.

The greatest increase in the production of gold from placers was in the Tolovana and Marshall districts. Among the other important placer gold districts the greatest increases were in the Hot Springs, Ruby, Copper River, Circle, and Seward Peninsula districts. There were also large decreases in the Fairbanks and Iditarod districts.

The value of the gold obtained from Alaskan mines in 1916 was \$17,241,713 and that of silver \$907,554. The value of the production in 1915 was gold, \$16,702,144; silver, \$543,393.

Gold from lode mines formed 38 per cent of the total gold production in 1916, as compared with 37 per cent in 1915 and 32 per

cent in 1914. The production of gold from deep mines in 1916 was \$6,101,713 and that of silver 1,317,171 ounces, valued at \$866,699. Twenty-nine gold lode mines were operated in Alaska in 1916, or one less than in 1915. Of these eight were in southeastern Alaska, five on Prince William Sound, four on Kenai Peninsula, four in the Willow Creek district, and eight in the Fairbanks district. These mines are estimated to have produced 3,548,798 tons of ore in 1916, as compared with 3,020,607 tons in 1915. The average value of the gold and silver content for the gold ores mined in 1916 was \$1.70, which is considerably less than the average value of the ores mined in 1915, or \$2.79.

In 1916 gold valued at \$3,416,501 and 31,875 ounces of silver, valued at \$20,974, were recovered by amalgamation, and \$1,660,708 in gold and 6,554 ounces of silver, valued at \$4,312, were recovered by cyanidation. The estimated quantity of silver contained in placer bullion was 62,000 ounces.

The copper ores smelted contained \$188,977 in gold and 1,207,121 ounces of silver, valued at \$794,286. The average recovery of gold and silver from copper ores was \$1.59 a ton.

The value of the Alaskan placer gold produced in 1916 was \$11,140,000; in 1915 it was \$10,480,000. Although there were notable decreases in the output of placer gold from the Fairbanks and Iditarod districts, nearly all the other large districts showed an increase. It is estimated that 650 placer mines were operated in the summer of 1916.

The number of gold dredges operated in Alaska in 1916 was 34, or 1 less than in the previous year. Twenty-seven of the dredges were on Seward Peninsula, three in the Iditarod district, and one each in the Fairbanks, Ruby, Circle, and Yentna districts. Alaskan dredges are estimated to have handled 3,900,000 cubic yards of gravel in 1916 and to have recovered gold valued at \$2,679,000, a recovery of 69 cents a cubic yard. The gravel handled in 1915 was 4,600,000 cubic yards, having an average value of 51 cents a cubic yard and a total value of \$2,330,000 in gold. Since the beginning of dredge mining to the end of 1916 Alaskan dredges have recovered gold valued at \$15,109,894.

Deposits of bullion at the mints and assay offices credited to Alaska, calendar year 1916.

ARIZONA.

The value of the mine output of gold, silver, copper, lead, and zinc in Arizona in 1916 was \$190,806,170, an increase of \$99,999,821, or more than 110 per cent. Although the gold output was somewhat less than that of the previous year, there were large increases and even record outputs of silver, copper, lead, and zinc. The copper production was especially noteworthy.

The gold production had a value of \$3,985,559, a decrease of \$180,466 from that of the previous year. Of this amount, \$14,281 represented the value of the placer gold. Cochise County, with \$1,514,810, took the lead as a gold producer. Mohave County fell to second place with \$1,038,814, closely followed by Yavapai County. The largest part of the gold, or \$1,425,473, had its source in bullion from ore amalgamated or cyanided. Crude ore shipped directly to smelters contained \$2,129,500 and concentrates, \$405,500. The gold from deep mines was derived from the following sources: Siliceous ore, \$1,517,616; copper ore, \$2,180,211; lead ore, \$119,756; zinc ore, \$79,313; copper-lead ore, \$750; lead-zinc ore, \$42,035; and copper-zinc ore, \$31,597.

The silver output amounted to 7,212,039 ounces, an increase of 1,563,019 ounces, or nearly 28 per cent. Of this total, Cochise County alone produced 3,709,225 ounces, and Yavapai County followed with 1,735,302 ounces. The greater part of the silver, or 5,305,608 ounces, came from crude ore shipped to smelters, concentrates contained 1,179,552 ounces, and the gold and silver bullion, 658,830 ounces. The sources of the silver output was as follows: Siliceous ore, 997,372 ounces; copper ore, 5,347,893 ounces; lead ore, 539,108 ounces; zinc ore, 92,264 ounces; copper-lead ore, 30,476 ounces; lead-zinc ore, 159,247 ounces; and copper-zinc ore, 45,508 ounces.

There were 527 mines producing during the year, of which number only 23 were placer mines. The ore output was 17,033,810 tons, an increase of 7,421,251 tons. A great part of this increase was due to the low-grade copper properties in Gila, Greenlee, and Pinal Counties. Of the total ore, 12,851,367 tons were concentrated to make 853,576 tons of concentrates, 3,773,733 tons were shipped directly to smelters, 275,839 tons were treated in gold and silver mills, the remainder being made up by slag and old tailings. The most important increase was in copper ore, with good increases in lead ore, zinc ore, and lead-zinc ore, but there was a slight decrease in siliceous ore.

Arizona is the largest copper-producing State, and the output in 1916 was 721,833,169 pounds, or an increase of nearly 57 per cent; lead was 27,062,087 pounds, an increase of nearly 25 per cent; and recoverable zinc was 19,677,949 pounds, an increase of 8 per cent.

CALIFORNIA.

The yield of gold in California in the year 1916 showed some decrease as compared with that of 1915, according to Charles G. Yale, of the United States Geological Survey, who annually compiles the figures of metal mine production in that State. This was not due, in his opinion, to scarcity of ore or of gravel supply, but rather to labor troubles, which partially or entirely closed down many of the

larger deep mines for a period of nearly two months during the year. With the enforced cessation of work in the mines the mills could not be operated, so that the total output for the year was naturally much lessened. A small decrease in the yield of gold was also shown in the placer mining industry.

The total mine production of gold in California in 1916 was \$21,410,741, which is 4.8 per cent less than in 1915. Of this, \$12,835,084 was derived from the deep mines. Of the deep mine gold, 92.5 per cent was obtained from siliceous ore, 7.2 per cent from copper ores, 0.2 per cent from silver-lead ores, and the remainder from lead and zinc ores. The producing deep mines of 1916 may be classified by chief metallic product as follows: Gold, 204; copper, 60; silver, 1; silver-lead, 18; lead, 11; and zinc, 3. There were 24 less deep mines productive in 1916 than in 1915. Of the total gold, the deep mines produced 60 per cent in 1916 compared with 62 per cent in 1915. The total output of ores from the deep mines was the largest in the history of the State, and the average value per ton increased from \$7.87 in 1915 to \$9.40 per ton in 1916. These increases were mainly due to operations in copper, lead, and zinc properties, and do not apply to the gold mines. Mines in the Mother Lode counties produced much less ore than usual, for the reason explained above, yet the yield in gold and silver per ton of ore treated was higher than has been the case for some years, or \$4.19 per ton. There is much encouragement in this to deep mining in the State, for two of the most productive of these Mother Lode properties now have their main shafts sunk below the vertical depth of 4,000 feet, and are taking out even better ore than on upper levels.

It is estimated by those operating the larger deep gold-mine properties in the State that the cost of gold mining has increased fully 18 per cent within the last year. There is a scarcity of skilled labor, especially in machinemen and timbermen. Increased wages in copper mines has caused many skilled miners to leave the gold mines for employment in other States where higher wages prevail than in California. The Federal commission having control of such mines as may damage navigable streams by permitting debris or tailings to pass into them have lately included the deep mines as well as the hydraulic mines in their supervision. Therefore the larger deep mines have been compelled at considerable expense to build dams, or impounding works, to hold the tailings from the streams. This and the high cost of cyanide are other reasons for the increased cost of operating deep mines in the State.

There were 589 mines reporting product in California in 1916, of which 297 were deep and 292 placers of various kinds. These placer mines were made up of 87 hydraulic, 60 dredge (number of machines), 67 drift, and 78 surface or sluicing mines. The production of gold from placer mines for 1916 was \$8,575,657, which is 40 per cent of the total gold yield. Of this the hydraulic mines produced \$390,015, the dredges \$7,769,227, the drift mines \$251,297, and the surface placers \$165,118. In the case of the dredges, the most important feature of the placer mining industry, there was only a nominal difference in the output of gold in 1916 and 1915. This industry shows no signs of decreasing importance, notwithstanding the smaller production in the Oroville and Folsom fields. The production of the Yuba County field is increasing and more

than makes up any deficiency in the other two larger dredging fields. Moreover, the smaller dredging fields in other counties show some increase in yield. Since gold dredging commenced in California, in 1898, the total output of gold from that source to the end of 1916 has been \$86,873,458. Of this the Oroville field has yielded \$29,442,604 in gold, not including \$1,973,085 derived in the last seven years from adjacent districts in the same county (Butte). The Marysville field produced from 1903 to 1916, inclusive, \$27,439,000 in gold. The Folsom field since 1902 has yielded by dredging \$18,926,530. The production of smaller fields is included in the total figures given above. The dredges produced 36 per cent of the total gold yield from all sources in 1916. Of the total placer gold the dredges produced 90.6 per cent, the hydraulic mines 4.5 per cent, the drift mines, 2.9 per cent, and the surface or sluicing mines 2 per cent. Gold dredges are now operating in 11 counties of California.

Of the 28 counties producing gold in California in 1916 there were 7 which yielded no placer gold and 4 which yielded no gold from deep mines. Six counties of the State produced more than \$1,000,000 each in 1916, as follows: Nevada, \$3,669,878; Amador, \$3,660,550; Yuba, \$3,167,723; Sacramento, \$1,833,855; Calaveras, \$1,356,120; and Butte County, \$1,257,231. The leading hydraulic mining county was Trinity, the greatest producer of gold from drift mines was Placer County, the largest producer of gold from dredges was Yuba County, and the largest producer from surface or sluicing mines was Eldorado County. Amador County was the most productive county of gold from deep mines, with \$3,655,937 to its credit for the year from that source.

The total yield of silver in California in 1916 was 2,564,354 fine ounces, valued at \$1,687,345, an increase in quantity over 1915 of 885,598 ounces and in value of \$836,216. The larger portion of the output, 2,303,655 ounces, valued at \$1,515,805, was derived from crude smelting ores. The largest output came from Shasta County, which produced from copper ores 1,679,455 ounces, from siliceous ore 14,644 ounces, and from placers 1,146 ounces. From placer-mining operations 29,611 ounces, valued at \$19,484, were derived. Siliceous ore yielded 179,199 ounces, copper ores 1,969,783 ounces, lead ores 2,129 ounces, silver-lead ores 323,339 ounces, and zinc ores 60,293 ounces.

COLORADO.

Colorado mines during 1916 produced \$19,153,821 in gold and 7,656,544 ounces of silver, as compared with \$22,414,944 in gold and 7,027,972 ounces of silver in 1915. This shows a decrease of \$3,261,123 in gold and an increase of 628,572 ounces in silver, following an increase of \$2,531,839 in gold and a decrease of 1,768,093 ounces in silver in 1915. The total gross value of the production of gold, silver, copper, lead, and zinc in Colorado in 1916 was \$49,200,675, an increase of 13 per cent, due almost entirely to the increased output of zinc.

The Globe, Leadville, Pueblo, Durango, and Salida smelters were operated continuously on ore from Canada, Colorado, Idaho, South Dakota, and other States, including a considerable and increased quantity of zinc residues from Kansas and Oklahoma zinc

smelters. The quantity of zinc residues to Colorado smelters has been increasing for several years. The United States Zinc Co.'s zinc smelter, at Pueblo, was operated steadily on zinc-lead ores from various counties in Colorado, and also from Arizona, Idaho, Montana, Nevada, and Utah; and the wet-concentration, magnetic-separation mill was also operated steadily on low-grade zinc-lead ore and concentrates from Leadville, Red Cliff, and Telluride. The Western Chemical Co.'s sulphuric-acid, magnetic-separation, wet-concentration plant, at Denver, was operated steadily at increased capacity, as was the Empire Zinc Co.'s 200-ton magnetic-separation plant, at Canon City, both treating chiefly Leadville and Red Cliff zinc-lead sulphide ores. The Western Zinc Oxide Co.'s plant, at Leadville, was operated steadily throughout the year, the product being a zinc oxide for use as a pigment. The copper-matting plant at Ouray was operated for a short period only, and the newly constructed copper-matting plant at Vulcan, Gunnison County, was operated for a short time only. Cyanide precipitates and copper ore were shipped to the Omaha smelter, and copper ore and copper matte were shipped to Utah plants. Lead bullion and copper matte from lead plants in Colorado were sent to the Omaha smelter and to Eastern refineries.

Lake County (Leadville and outlying districts) produced \$119,169 placer gold and \$1,601,271 lode gold, a total of \$1,720,440, as compared with \$69,009 placer gold and \$2,177,143 lode gold in 1915, and the production of silver was 2,931,281 ounces, as compared with 2,571,002 ounces in 1915, and with 3,810,830 ounces in 1914.

The San Juan region of Dolores, La Plata, Ouray, San Juan, and San Miguel Counties produced \$3,041,275 in gold and 2,224,311 ounces of silver in 1915. There were decreases in gold of \$39,877 in La Plata, \$626,841 in Ouray, and \$145,053 in San Juan. There were decreases for silver of 50,653 ounces in Dolores, 17,182 ounces in La Plata, and 284,600 ounces in San Miguel. There was an increase of 71,705 ounces in San Juan.

The output of Boulder, Clear Creek, and Gilpin Counties was \$1,001,489 in gold and 881,518 ounces of silver, as compared with \$1,249,894 in gold and 790,065 ounces of silver in 1915.

The output of placer gold from dredges and other placer operations at Breckenridge, Summit County, was \$579,050, as compared with \$607,195 in 1915, and the yield of both placer and lode gold in Summit County was \$673,891, as compared with \$680,144 in 1915.

The number of mines producing metals in Colorado in 1916 was 852, of which 27 were placers, as against 821, of which 35 were placers, in 1915, and against 866, of which 36 were placers, in 1914.

The chlorination process yielded 4,366.50 fine ounces of gold and 2,150 ounces of silver; amalgamation yielded 46,345.76 fine ounces of gold and 23,612 ounces of silver; and cyanidation yielded 530,465.50 fine ounces of gold and 510,991 ounces of silver.

CENTRAL STATES.

Only four of the Central States, Michigan, Missouri, Oklahoma, and Illinois, produced any silver in 1916. The total production in 1916 was 852,380 fine ounces, valued at \$560,866, against an output of 647,553 ounces, valued at \$328,309 from Michigan, Missouri, and Illinois in 1915.

All the silver produced in the Central States in 1916 was recovered incidentally to the production of copper and lead.

Of the 1916 production 716,640 ounces came from the copper lodes of Michigan, an increase of 130,707 ounces. A few ounces of silver were recovered from copper ore mined in Missouri, but nearly all the output of 129,450 ounces was derived from 88,081 tons of lead concentrates which were desilverized.

From the lead concentrates derived from the southern Illinois fluor-spar ores, 5,684 ounces of silver were recovered. This was 1,820 ounces more than the recovery in 1915. Twenty-seven tons of silver ore were shipped from the Criswell mine near Byars, Okla., which yielded 606 ounces of silver.

EASTERN OR APPALACHIAN STATES.

The total gold production of Alabama, Georgia, North Carolina, South Carolina, Tennessee, and Virginia in 1916 was \$64,370, against \$224,250 in 1915. North Carolina yielded \$26,237, which was \$145,764 less than in 1915. The production of Georgia decreased from \$35,821 in 1915 to \$22,539 in 1916; that of Alabama increased from \$5,243 to \$8,650; and that of South Carolina decreased from \$3,789 to \$320. The Virginia production was \$885; of this amount \$800 was from copper ores. The production in 1916 was \$351 more than in 1915. The gold recovered in Tennessee was \$5,739, all of which was derived from copper ores.

The gold recovered from 46 placers was \$16,616, mainly from North Carolina and Georgia. The largest producers of gold from deep mines were the Pine Mountain mine in Georgia and the Howie mine in North Carolina.

The silver production in 1916 was 100,323 ounces, a decrease of 2,222 ounces. Only 560 ounces of the silver was derived from placer mines and from siliceous ores and 945 ounces from zinc-lead ores. The remainder came from copper ore of the Ducktown district in Tennessee and from various copper mines in Vermont, Maryland, and Virginia.

The following tables give the total production of gold in the southern Appalachian States from the discovery of the metal to the end of 1916 and the yearly output of each State, so far as records are available. The figures given are those of the Bureau of the Mint for the period 1799 to 1904 and those of the United States Geological Survey for the period 1905 to 1916.

The total yield of gold from 1799 to the end of 1916 is \$50,978,188, as shown in the following table:

Value of estimated production of gold in the southern Appalachian States, 1799-1916, by States.

Alabama.....	\$763,277	Tennessee.....	\$242,818
Georgia.....	17,810,987	Virginia.....	3,294,826

IDAHO.

In 1916 the total value of the metal output of Idaho was \$48,767,-783, an increase of \$15,438,853 over that of 1915. Of this total, the gold was valued at \$1,115,810; silver, \$8,093,974; copper, \$2,085,-657; lead, \$25,880,643; and recoverable zinc, \$11,591,699. There were decided increases in silver, copper, lead, and zinc, but there was a slight decrease in the gold output.

Gold decreased from \$1,179,731 in 1915 to \$1,115,810 in 1916. Of this total, the placer gold amounted to \$449,093, against \$584,890 in 1915. The gold won by dredges valued at \$327,696, a decrease from \$486,541 in 1915. Siliceous ore produced more gold than any other kind, or \$527,064. Gold in copper ore was valued at \$74,821; lead ore, \$53,186; lead-zinc ore, \$11,446; with small amounts from zinc ore and copper-lead ore. Boise County was much the largest gold producer, principally from placer property worked by dredges, and Elmore, Idaho, and Lemhi Counties supplied important amounts of gold. Gold in crude ore shipped directly to smelters had a value

of \$106,116; gold in concentrates, \$95,272; and gold in ores amalgamated and cyanided, \$464,697.

The silver output was 12,300,873 fine ounces, an increase of 531,745 ounces, or nearly 5 per cent. The main increase was in Shoshone County, where the large mines of the Coeur d'Alene district took advantage of the better price of both silver and lead. A large part of the silver production came from lead ore and lead-zinc ore, the former supplying 8,227,936 ounces and the latter 3,718,529 ounces. Copper ore supplied 218,598 ounces; siliceous ore, 112,519 ounces; zinc ore, 18,228 ounces; and small quantities came from placers and copper-lead ore. Concentrates of various kinds supplied 8,316,476 ounces of silver, crude ore shipped to smelters, 3,944,355 ounces; and bullion from gold and silver mills, 20,420 ounces. The Coeur d'Alene region of Shoshone County produced 11,639,841 ounces of silver, valued at \$7,659,016.

There were 418 mines producing during the year, of which 162 were placer mines and 256 deep mines. The total ore mined and treated was 2,718,045 tons, an increase of 309,199 tons over the total of 1915. Of this tonnage, 2,387,881 tons were concentrated, 249,964 tons were shipped directly to smelters, and 69,773 tons were treated in gold and silver mills; the remainder being slag and old tailings. The mines of Idaho also produced 8,478,281 pounds of copper, 375,081,781 pounds of lead, and 86,505,219 pounds of recoverable zinc in 1916.

MONTANA.

The mine output of gold, silver, copper, lead, and zinc in Montana in 1916 had a total value of \$133,882,947, an increase of \$50,970,693 over that of 1915. This large increase resulted mainly from the output of copper. There were good increases in silver and zinc but there were decreases in the quantities of gold and lead.

The total gold output was valued at \$4,550,494, of which \$3,827,335 came from deep mines and \$723,159 came from placers. Most of the placer gold, or \$642,572, came from dredge operations, which decreased from \$861,626 in 1915. As in former years, the gold was derived principally from siliceous ores, which supplied \$2,799,530. Copper ore was next in importance with \$790,391; lead-zinc ore supplied \$101,800; zinc ore, \$78,808; lead ore, \$42,716; copper-lead ore, \$10,030; and copper-zinc ore, \$4,060. The gold from crude ore shipped to smelters contained \$1,625,414; concentrates, \$950,922; and bullion from amalgamation and cyanide mills, \$1,247,097.

The silver output increased from 14,378,437 ounces in 1915 to 16,494,366 ounces in 1916, an increase of 2,115,929 ounces. The value of the output increased from \$7,289,868 in 1915 to \$10,853,293 in 1916. Silver Bow County, or the Butte region, produced 14,983,771 ounces, and Granite County was next with 649,328 ounces. There were 13,142,845 ounces derived from concentrates, 3,059,096 ounces from crude ore, and 243,164 ounces from bullion produced at gold and silver mills. Separated as to kinds of ore, copper ore supplied 11,226,034 ounces; lead-zinc ore, 2,759,410 ounces; siliceous ore, 1,175,791 ounces; zinc ore, 1,008,141 ounces; lead ore, 180,601 ounces; copper-lead ore, 87,520 ounces; copper-zinc ore, 51,527 ounces; and placers, 5,342 ounces.

There were 513 producing mines, of which 393 were deep mines and 120 were placer properties. The total output of ore was 7,860,425 tons, an increase of 1,730,501 tons over that of 1915. Of this total, 6,629,675 tons were concentrated, 710,224 tons were shipped directly to smelters, and 351,014 tons were treated in gold and silver mills. Aside from gold and silver, the deep mines of the State produced 352,928,373 pounds of copper, 13,595,136 pounds of lead, and 229,259,075 pounds of recoverable zinc.

NEVADA.

The total value of the production of gold, silver, copper, lead, and zinc in Nevada in 1916 was \$49,946,424, an increase of \$15,394,988. There were good increases in copper, lead, and zinc, a decided decrease in the gold output and a less important decrease in the quantity of silver, though the value was more on account of the higher price in 1916.

The gold output had a value of \$8,866,237, against \$11,404,300 in 1915. Esmeralda County, as in former years, took the lead with \$2,684,688, but it was followed very closely by Nye County with \$2,505,714. Mineral County and White Pine County were also important gold producers. The placer gold output was valued at \$354,313, against \$395,319 in 1915. No dredges were operated in 1916, and most of the placer gold came from the Manhattan district in Nye County and the Battle Mountain district in Lander County. The greater part of the gold, or \$6,842,403, was obtained from ores amalgamated or cyanided. Crude ore shipped to smelters contained \$655,559 and concentrates, \$1,001,746. The siliceous ores contained \$7,264,503; copper ore, \$1,175,830; lead ore, \$62,978; copper-lead ore, \$612; and lead-zinc ore, \$8,001.

The production of silver in 1916 was 13,837,525 ounces, against 14,459,840 ounces in 1915, a decrease of 622,315 ounces. The output of the Tonopah district, in Nye County, continued to decrease, but there were good increases in several counties, particularly in Clark, Elko, and Storey Counties. Most of the silver, or 12,751,911 ounces, came from siliceous ores, and the source of the remainder was as follows: Copper ore, 384,393 ounces; lead ore, 444,585 ounces; lead-zinc ore, 178,476 ounces; zinc ore, 21,613 ounces; and copper-lead ore, 50,803 ounces; placers, 5,744 ounces. Bullion from gold and silver mills supplied 11,326,955 fine ounces of silver; concentrates, 1,107,119 ounces; and crude ore shipped to smelters, 1,380,292 ounces.

There were 779 producers in the State in 1916, of which 65 were placers and 714 deep-mine properties. The production of ore sold or treated increased considerably, from 5,118,620 tons in 1915 to 5,941,165 tons in 1916. Most of the ore, or 4,066,727 tons, was concentrated, making 561,950 tons of concentrates. The ore and tailings milled and treated largely by the cyanide process amounted to 1,499,140 tons, and crude ore shipped to smelters was 371,053 tons. The deep mines also produced 105,116,813 pounds of copper, 25,637,278 pounds of lead, and 32,443,189 pounds of recoverable zinc. There was a good increase in the copper output, though the Mason Valley plant was idle during the year.

NEW MEXICO.

In 1916 the mines of New Mexico yielded \$1,382,480 in gold and 1,766,274 ounces of silver, a decrease of \$78,625 for gold and of 239,257 ounces for silver.

The Mogollon district, Socorro County (reached at present from the railroad point Silver City, Grant County, a distance of 80 miles), continued to be the most important silver-producing district, but gave way to the Elizabethtown district, Colfax County, in point of production of gold. The yield from the Mogollon district in 1916 was \$373,068 in gold and 1,008,483 ounces of silver, a decrease of \$136,097 in gold and 292,576 ounces of silver, as compared with the output in 1915. The gold from this district represented 27 per cent of the State's production of this metal, and silver was 57 per cent of the State's total silver output. The Mogollon Mines Co.'s mill was operated steadily on ore from the company's Last Chance and Top mines, and the Fanny mill, of the Socorro Mining & Milling Co., was operated continuously on ore from the company's mines and from various other properties in the district. The Oaks Co. did much development work. The product of the mills is chiefly refined silver-gold bullion from cyanide precipitates, the balance being high-grade gold-silver concentrates. In terms of recovered metal, the ore averaged per ton 0.1526 ounce, or \$3.15, in gold, and 8.52 ounces, or \$5.61, in silver. The first district in the production of gold was Elizabethtown (Baldy) district, Colfax County, with output of a small quantity of placer gold from various placers and an important quantity of high-grade metallic gold, gold bullion, and concentrates from the Aztec mine, at Baldy. The Lordsburg district, Grant County, again increased its shipments of gold and silver bearing copper and dry ores, the gold output increasing \$44,300, but the silver yield decreasing 1,251 ounces. The small gold and silver credit realized from the smelter from the copper concentrates of the Chino Copper Co. was \$80,498 for the year and represented a credit of 0.11 cent per pound of copper produced, against 0.12 cent in 1915. A small yield of gold-silver bullion was made from the Gold Hill district, north of Lordsburg, and the Steeplerock district (reopened in 1915), Grant County, again contributed some gold and silver. The continuous operation of the mines and matte smelter of the Santa Fe Gold & Copper Co., at San Pedro, Santa Fe County, also contributed to the gold output. Shipments of gold-copper ore from the Jarilla district, Otero County, increased in weight of ores shipped, but the gold and silver contained was not equal to the output in 1915. Operations at the 100-ton cyanidation plant of the Cossak Mining Co., in the Co-chiti (Bland) district, Sandoval County, were resumed (after an idleness from December, 1916) in April, 1917, and were continued through November, with an important yield of silver-gold bullion. The amalgamation mill at Homestake mine, Whiteoaks, Lincoln County, was operated for a period.

The most important metal produced in New Mexico is copper, with a yield in 1916 of 92,747,289 pounds, valued at \$22,815,833. The principal producing properties are those of the Chino Copper Co., Santa Rita, and the Burro Mountain Copper Co., at Tyrone. The value of the output of zinc in New Mexico in 1916 was \$4,900,467,

and this is \$3,439,362 more than the value of the gold yield and \$3,833,633 more than the silver yield.

In 1916 there were sold or treated 3,870,950 short tons of ore mined in New Mexico. Of this total only 135,267 tons went to gold and silver mills; 3,442,681 tons went to mills for concentration only; 293,002 tons went crude to smelters; 311,726 tons of dry concentrates went to smelters. Bullion shipped from New Mexico mills contained 34,332.33 fine ounces of gold and 841,865 ounces of silver. Of this total, 17,576.20 ounces of gold and 2,395 ounces of silver were recovered by amalgamation and 16,756.13 ounces of gold and 839,470 ounces of silver were recovered by cyanidation.

OREGON.

There were not many more mines in active operation in Oregon in 1916 than there were in 1915, yet the total metal yield of the State increased materially, which was largely due to the augmented quantity and value of copper. According to Charles G. Yale, of the United States Geological Survey, there was a small increase in gold in 1916 and about 96 per cent increase in the production of silver. The gold from placer mines increased by \$390,347, but that from the deep mines decreased, so that the net increase of gold was only \$40,383. The total mine output of gold in the State in 1916 was \$1,902,179. The production of silver in 1916 was 231,342 ounces, valued at \$152,223, an increase, compared with 1915, of 113,395 ounces. The increase of copper output for the year was 794 per cent, the total quantity being 3,581,886 pounds, with an increase in value of \$802,189. The large increase in the production of silver was mainly due to the abnormal increase of copper, for, of the total increase of 113,395 ounces, 18,879 ounces was from siliceous ores, and 94,015 ounces was from copper ores. From the placers there was an increase of 3,722 ounces of silver, but there was less silver obtained from lead ores in 1916 than in 1915.

The hydraulic mines produced \$164,548 in 1916, or \$49,535 more than in 1915; the drift mines \$4,432, or \$2,366 more; and the dredges and surface placers combined \$703,537, or \$338,446 more. The three dredges produced most of this gold. The largest yield of gold from one county came, as usual, from Baker County, though it was less than in 1915; but the next county in rank of gold production, Josephine, increased its yield. Other counties in rank of production of gold are Grant, Jackson, Douglas, Malheur, Crook, Curry, Lane, Marion, and Wheeler, in the order named. The average value of the siliceous ore mined and treated decreased nearly a dollar a ton in 1916, as compared with 1915, although the quantity of ore treated or sold varied little in the two years, which accounts for the decrease in gold production from the deep mines of the State.

The output of gold from the southwestern counties of Oregon, which are Benton, Coos, Curry, Douglas, Jackson, Josephine, and Lane, increased from \$128,216 in 1915 to \$172,289 in 1916. Neither Benton nor Coos Counties produced any gold in 1916.

The gold-producing northeastern counties of Oregon, comprising Baker, Crook, Grant, Malheur, and Wheeler, yielded \$1,728,217 in gold in 1916, which was a slight decrease from the preceding year. Of this Baker County produced 95 per cent. The yield of placer gold in these northeastern counties in 1916 was \$741,190, which is 93 per

cent more than in 1915. The decrease in gold from deep mines in these last-named counties was 27 per cent in 1916.

The total gold yield of the three dredges which were in operation in Oregon in 1916 far exceeded the combined output from all other forms of placer mining, which came from 61 productive hydraulic mines, 5 drift mines, and 6 surface placer mines. Of the productive deep mines, numbering altogether 33, there were 21 gold properties, 11 copper, and 1 lead. The total output of ore from these deep mines was 159,071 tons, which averaged \$7.39 per ton in gold and silver, aside from the copper and lead.

SOUTH DAKOTA.

South Dakota lode and placer mines in 1916 produced \$7,460,644 in gold and 215,205 fine ounces of silver, as compared with \$7,406,305 in gold and 199,864 ounces of silver in 1915. The placer gold output amounted to only 102 ounces, some of which went directly into jewelry.

South Dakota has produced, during the 40 years of its active output, from 1876 to 1916, inclusive, \$200,154,589 in gold and 6,247,738 fine ounces of silver having a commercial value of \$4,456,610, and a total of \$204,611,199.

A total of 1,870,783 short tons of ore was mined and treated in 1916, as compared with 1,889,975 short tons in 1915. There were 1,870,249 tons treated in the mills of the State, yielding as amalgamation bullion and cyanide precipitates, \$7,437,332 in gold and 212,779 fine ounces of silver, an average of \$3.98 in gold and 0.11 ounce in silver. The quantity of crude ore shipped to smelters amounted to 534 tons, averaging 1.707 fine ounces of gold and 4.46 ounces of silver per ton.

The Homestake mines and mills were operated continuously in 1916, with an increased tonnage treated. The company's Ellison shaft was sunk to and below the 2,000-foot level, a station cut, and crosscutting started. Sinking will be resumed as soon as the station is clear. Prospecting with diamond drills was done at the Oro Hondo shaft adjoining the Homestake property. The Golden Reward mill was operated steadily on siliceous ore from its mines and on custom ore; in addition, a considerable quantity of partly oxidized ore continued to be roasted at the Astoria shaft and sent to the mill. The Mogul cyanidation mill was operated steadily on company and custom ore. The Trojan mill capacity was increased and the mill operated steadily on company and custom ore. The Reliance mill was operated up to the end of the year on company and custom ore. The Wasp No. 2 Co. operated its mill and mine through November. The Bismarck mine and mill were idle. The Rattlesnake Jack cyanidation-concentration mill was operated for a period. A small yield of placer gold was made in Custer, Lawrence, and Pennington Counties.

TEXAS.

The output of Texas mines in 1916 was \$414 in gold and 653,455 ounces of silver, as compared with \$1,503 in gold and 675,473 ounces of silver in 1915.

Since 1885 the mines of Texas have produced 13,071,337 fine ounces of silver, with a total commercial value of \$8,696,932, a grand

total of \$8,947,118 for gold, silver, copper, lead, and zinc during that period. The greater part of this silver has come from the Presidio silver mine, in the Shafter district, Presidio County. The operation of this company's mine and cyanidation mill was continuous in 1916. A car of lead-silver ore was shipped from the Alpine district, Brewster County; a considerable quantity of silver-copper ore was shipped from the Allamoore district, Culberson County; copper-lead-silver-gold ore was shipped from the Sierra Blanca district, El Paso County.

UTAH.

The value of the gold, silver, copper, lead, and zinc in Utah in 1916 was \$89,268,684. This represents an increase of \$34,163,614 over that of 1915, which was \$55,105,070. Part of the increase was due to the higher prices of metals, though there were increases in the quantities of all the metals except gold in 1916.

The gold output was valued at \$3,574,947, a decrease of \$34,162 from that of 1915. Of this total, Salt Lake County produced \$2,513,096 in gold and Juab County produced \$856,474. Separated as to source, copper ore was most important, containing gold valued at \$2,344,114. Lead ore supplied in gold \$693,243; lead-zinc ore, \$339,046; siliceous ore, \$188,577; copper-lead ore, \$8,717; and placers, \$1,250. Concentrates of various kinds produced gold valued at \$1,433,992, of which the copper concentrates contained \$972,169 and the lead concentrates \$452,213. The value of the gold in crude ore shipped to smelters was \$2,111,637, principally in copper ore. There was only \$6,389 in gold from gold and silver mill bullion.

The silver output of Utah increased from 12,313,205 ounces in 1915 to 13,253,037 ounces in 1916, or 939,832 ounces. The increase in value, however, was \$2,477,703. Juab County produced 4,892,439 ounces of silver; Salt Lake County, 3,863,264 ounces; and Summit County, 2,400,549 ounces. Separated as to source, the silver came principally from lead ore, which supplied 8,118,264 ounces. Other important sources were copper ore, which supplied 2,633,402 ounces; lead-zinc ore, 1,199,023 ounces; and siliceous ore, 1,153,993 ounces. Crude ore shipped to smelters supplied 10,536,058 ounces; concentrates, 2,473,132 ounces; and gold and silver bullion, 340 ounces. A small amount came from old tailings, slag, and from ore leached. The Tintic district, in Juab and Utah Counties, produced 5,113,566 ounces, against 4,370,984 ounces in 1915. The Bingham district of Salt Lake County produced 3,095,335 ounces, and the Park City region, in Summit and Wasatch Counties, 2,900,718 ounces.

The copper production of Utah increased from 187,671,188 pounds in 1915 to 240,275,222 pounds in 1916, which is a record for the State. The deep mines also produced 201,490,075 pounds of lead and 29,572,528 pounds of recoverable zinc, there being good increases in both metals.

There were 318 producing properties in 1916, of which 8 were placer mines and the remainder deep mines. The ore output increased from 10,451,445 tons in 1915 to 13,920,643 tons in 1916. Most of this tonnage, or 12,228,926 tons, was concentrated, making 749,303 tons of concentrates. There were 1,281,576 tons of crude ore shipped to smelters, and only 1,423 tons were treated in gold and silver mills. The smelters at Murray, Midvale, Garfield, and Tooele were unusually active during the entire year.

WASHINGTON.

The metal production of Washington in 1916 had a total value of \$2,048,350, an increase of \$1,304,317, or nearly three times the value of the production in 1915. There were increases in the five metals, gold, silver, copper, lead, and zinc.

The gold output had a value of \$577,655, an increase of \$186,236, or nearly 48 per cent. Ferry County, including the Republic district, was the largest gold producer, with \$399,376, and Whatcom County contributed an important amount of gold, valued at \$133,200. Most of the gold, or \$557,706, came from siliceous ore, principally from the Republic district. Copper ore supplied \$11,654 in gold; placers, \$8,277; and lead ore, \$18. Gold contained in crude ore shipped was valued at \$421,008; gold in bullion, \$147,455; and gold in concentrates, \$915.

The silver output in 1916 was 335,121 fine ounces, an increase of 79,284 ounces. Stevens County was the main silver producer, and Ferry County followed closely. Of the total silver, 172,404 ounces had its source in copper ore, 154,546 ounces came from siliceous ores, 8,002 ounces from lead ores, and a few ounces were from placers and lead-zinc ore. Concentrates contained 92,543 ounces of silver, shipping ore 241,459 ounces; and ores treated in gold and silver mills, 1,015 ounces.

There were 113 placers and deep mines producing. The latter also produced 2,645,022 pounds of copper, 5,399,274 pounds of lead, and 1,693,734 pounds of spelter. The tonnage of ore sold or treated was 164,998 tons, an increase of 78,321 tons. Of this quantity, 98,661 tons were shipped directly, 53,635 tons were concentrated, and 12,702 tons were treated in amalgamation or cyanide mills.

WYOMING.

In 1916 Wyoming mines produced gold, silver, and copper with a gross value of \$666,414, as compared with \$93,286 in 1915. The copper output was valued at \$642,213; gold at \$20,566; and silver (5,524 ounces) at \$3,635. As compared with the yield of 1915, the gold increase was \$5,974 and the silver increase 4,684 ounces.

The Hartville district, Platte County, remained the principal producing district in Wyoming in 1916, shipments of high-grade ore carrying some silver from this district increasing heavily. The Encampment district, Carbon County, long idle, became the second district in importance in 1916, with shipments of copper ore containing some gold and silver. Operations were continued at the amalgamation mill on the Penn and King mines in the Seminole district, Carbon County. Several cars of ore and concentrates were shipped from the Rambler copper-platinum-palladium property, at Holmes, Albany County. The Atlantic City district, Fremont County, which had been the principal producing district for several years prior to 1915, made a small yield of gold from the test run of the Armstead mill on ore from the Bobtail mine and from "clean-up" operations at the Federal mill from ore from the Carissa mines. A small quantity of placer gold was also made from the Atlantic City district. There were small shipments of copper ore from Converse, Goshen, Laramie, and Lincoln Counties.

APPROXIMATE GOLD PRODUCT.

Approximate gold product of the United States during the calendar year 1916.

Items.	Weight.
	<i>Fine ounces.</i>
Domestic product of fine bars reported by private refineries.....	2,873,965
Unrefined gold of domestic production deposited at the mints and assay offices.....	1,590,183
Domestic gold contained in ores, copper matte, etc., exported for reduction.....	14,909

PRODUCTION OF GOLD AND SILVER IN THE UNITED STATES DURING THE CALENDAR YEAR 1916, BY STATES.

The Bureau of the Mint and the Geological Survey have issued the following joint statement as to the final compilation of the production of gold and silver in the United States during the calendar year 1916. As indicated in the new year's estimates of the Mint and Survey, the joint figures show increases in silver production on the final returns.

State or Territory.	Gold.		Silver.	
	Fine ounces.	Value.	Fine ounces.	Value. ¹
Alabama.....				
Alaska.....	358	\$7,400		
Arizona.....	780,037	16,124,800	1,266,317	\$833,000

PRODUCTION OF GOLD AND SILVER IN THE UNITED STATES SINCE 1792.

The production of gold and silver from the mines of the United States since 1792 is shown in the following table.

The commercial value of the silver product is reckoned at the average yearly market price of silver on the New York market.

Production of gold and silver in the United States from 1792 to 1844 and annually since.

[The estimate for 1792-1873 is by R. W. Raymond, commissioner of mining statistics, and since by Director of the Mint.]

GOLD AND SILVER USED IN INDUSTRIAL ARTS IN THE UNITED STATES DURING THE CALENDAR YEAR 1916.

Among the purveyors of gold and silver bars for use in the industrial arts of the United States, the mint at Philadelphia and the United States assay office at New York hold the foremost places; consequently, the larger portion of the material consumed in the arts is brought under Government notice and is a matter of public record.

The following table gives the value of the gold and the quantity of the silver bars issued by the Government institutions and private refineries during the calendar year 1916, with the class of material from which they were made:

Gold and silver issued by the Government institutions and manufactured by private refineries for use in the industrial arts during the calendar year 1916.

Material used.	Value of gold issued by—			Weight of silver issued by—		
	Government institutions.	Private refineries.	Total.	Government institutions.	Private refineries.	Total.
	<i>Dollars.</i>	<i>Dollars.</i>	<i>Dollars.</i>	<i>Fine ozs.</i>	<i>Fine ozs.</i>	<i>Fine ozs.</i>
Bullion, old plate, etc.....	44,397,574	3,163,613	47,561,187	3,510,406	28,515,757	32,026,163
United States coin.....		1,178,700	1,178,700		200	200
Total.....	44,397,574	4,342,313	48,739,887	3,510,406	28,515,957	32,026,363

Estimating that the total amount of gold coin used in the arts during the calendar year 1916 has been \$3,500,000, and silver coin \$100,000, equivalent to 77,344 fine ounces, the total industrial consumption of gold was \$51,061,187 and of silver 32,103,507 fine ounces.

In order to arrive at the net consumption in the industrial arts there should be deducted from the foregoing totals the amount of old jewelry, plate, etc., included in the private refinery returns and also the same class of material returned to coinage use. In the year 1916 these amounts aggregated \$9,941,038 in gold and 9,899,246 fine ounces in silver, which leaves \$41,120,149 of gold and 22,204,261 fine ounces of silver as the net amount of new bullion devoted to industrial use.

The table following gives the amounts and classification of the gold and silver used in the industrial arts in the United States since 1880.

Gold and silver furnished for use in manufactures and the arts and classification of the materials used, by calendar years, since 1880.

NOTE.—The total face value of uncurrent and mutilated gold coins melted is \$2,353,695.50, which produced 113,404.071 fine ounces, equal to \$2,344,270.16 in new gold coins, showing a loss of \$19,425.34. There were used at the Philadelphia mint 968.757 fine ounces in the coinage of 20,026 McKinley memorial gold dollars and 5,428.225 fine ounces for coinage purposes at the San Francisco mint and the remainder of 107,007.089 fine ounces were converted into bars. All of the uncurrent silver and minor coins were used in coinage.

DEPOSITS OF FOREIGN GOLD BULLION AND COIN.

Foreign gold bullion containing 19,743,395 fine ounces of the value of \$408,132,106 and foreign gold coin containing 6,993,334 fine ounces of the value of \$144,565,012 were deposited, having been received from the following countries during the calendar year 1916:

¹ Based on the average London price of silver during the calendar year 1916, \$0.68647.

COINAGE OF THE UNITED STATES MINTS DURING 1916.

The coinage for domestic use during the calendar year 1916 consisted of 347,900,469 pieces, the largest output in any calendar year in the history of the mint service since its organization in 1792. The highest previous record was in 1907, when 218,505,563 pieces was struck. This unusually large output was due to the heavy demand for fractional coin, especially for the nickel and the bronze pieces; the issue of silver coins of new design was also a factor. An interesting feature of the year's coinage was the making of the McKinley memorial gold dollars, authorized by act of Congress of February 23, 1916, in honor of ex-President William McKinley.

The striking of 35,840,050 pieces of metallic money for Central and South America and the Philippine Islands, and the preparation of 500,000 gold and 1,101,278 silver planchets for a South American Republic, contributed to the making of a very active year for the mint service.

The first delivery of the new-design dimes from the Philadelphia Mint was made on October 27, 1916; the new-design half dollars

on December 28, and the following day the new-design quarter dollars were issued. The first delivery of the new-design dimes from the San Francisco Mint was made on October 24, and of the new-design half dollars on December 26. The Denver Mint delivered new-design half dollars on December 22 and new-design dimes on the 29th of the same month.

A limited number of quarter dollars of the new design—only 52,000 pieces—was struck at the Philadelphia Mint.

Illustration and description of the new design silver coins was published in the Report of the Director of the Mint for the fiscal year 1916.

The following statement shows in detail the coinage, by pieces and value, during 1916:

NOTE.—The quantities in the column "Net imports" for both gold and silver for the years 1873-74 to 1886-87 are estimated only, deduced from the declared values of the trade for those years by the following process:

For gold, the rupee value of the monthly net imports was converted into sterling at the average rate of exchange in each month, and this sterling value was then divided by the English mint price of gold (£3 17s. 10½d.). For silver the average price of 107 rupees per 100 tolas, or 285.33 rupees per 100 ounces, was taken as the basis of the value of the annual imports.

UNITED STATES GOLD IN CANADA.

The total amount of United States gold coin in Canadian reserves on December 31, 1916, was \$130,306,792.50, as follows:

Location.	United States gold-coin holdings.
In treasury of Dominion of Canada.....	\$86,034,920.00
In charter banks (22 in number).....	44,271,872.50
Total in Canadian reserves.....	130,306,792.50

THE COURSE OF SILVER.

The following review of the London market for silver during the calendar year 1916 is from the annual circular issued by Messrs. Sharps & Wilkins, bullion brokers, of London, England:

The silver market during the past year has been remarkable for great and sudden changes in value, the quotation moving considerably almost every day. It has in consequence been a most difficult and dangerous one to work in, and has disappointed operators either for a fall or a rise in a most perplexing way.

The extreme range of prices has been great, the lowest figure 26½d. per ounce standard being that for the first working day of the year, and the highest 37½d. on May 3.

Until the middle of March the price might be roughly averaged at 27d., but the succeeding two months saw a most rapid rise to the highest point of the year.

Within a month it was again as low as 30d., and on July 10th fell to 28½d. for one day only; it quickly recovered to 30d., and was slightly above 32d. for the months of September and October, 34d. in early November, and improved rapidly until December 15, when 37d. was again reached.

In many ways the year has been unique, but the main outstanding feature has been the large and continuous absorption of silver for British and allied coinages and the Indian mint.

The ordinary and expected demand for the Indian bazaars has been practically absent, a condition which is almost unprecedented, but it would seem that the natives there, instead of hoarding their wealth in silver ornaments as is customary, have preferred to accumulate rupees. This, and the large payments for Indian troops in Mesopotamia, East Africa, and elsewhere, had the result that the outflow of rupees has been so large as to necessitate heavy coinage operations in Bombay and Calcutta to keep up the reserve against the note issue there.

Silver has also been bought for the large coinages required by both Russia and France, and the immense expenditure which the war has entailed, represented by the pay of millions of soldiers and tens of thousands of munition workers, as well as all the allowances to soldiers' relatives, made it necessary to provide a very great supply of silver currency at home, and, having regard to the present total of treasury £1 and 10s. notes (about, £147,000,000), it is not difficult to understand the need for the heavy minting that has been going on all year.

This was not at first thoroughly realized, and there was a tendency to believe that the rise in the price of silver occasioned thereby would be only temporary, and a great many persons interested in the market sold willingly. The native dealers in India were inclined at each rise in price to make bear sales, but lost money by their action. When toward the end of April and the beginning of May the continued pressure of buying began to be felt, there was so little available silver left that the price advanced to the extreme figure of that period. This was largely due to the fact that the dealings were confined to such supplies as were ready for delivery, the quotation being restricted to silver for prompt use, of which there was only a limited stock. The buying of silver for coinage into rupees now began to be a prominent feature in the market and as the need for currency was not so absolutely pressing as to time, opportunity was given for sales to be made from China, and the China exchange, having been far below silver parity for a good while, there was a sudden large selling from that quarter, very often without limit of price, and a precipitate fall took place in the quotation, which receded 6d. per ounce within a month. The lower price then ceased to be attractive to sellers, and the market improved again considerably and from that period gradually rose to 32½d. at the beginning of November. It would at that time have gone higher than it did, as the Indian Government purchases were important and China was no longer selling, except that America, after being only an average seller, began to pour out large lines upon the market and supplied silver at a rate which quite nullified the effect of the extensive buying still going on.

Until quite the end of the year the immense amount required was really obtained with very little difficulty, for although the need was well known, it seemed as if the dealers vied with each other to provide the silver wanted, and never has the attractive power of an enhanced price been more exemplified than during the months the demand persisted.

It has been estimated that China parted altogether with silver to the value of between eight and nine millions sterling, and it became a question whether she could afford such a diminution when the autumn export season there began to be active. The event has proved that she could not, and the Shanghai exchange mounted high enough in November to make it necessary to purchase silver with a view to restore

the equilibrium. Although most of this buying was done in America for shipment from San Francisco by the shortest and cheapest route, the new influence had a striking effect on prices, raising the quotation above 34d., from which level a further swift development to 37d. took place, more especially due to the want of India to strengthen the currency reserve, which in the past six weeks had become reduced from 25½ to 16 crores of rupees.

After such a year of fluctuations it is unusually difficult to forecast the future, but although the present quotation is high, it must not be overlooked that the stores of the world have been severely drawn upon. China has already sold as much silver as she seems to be able to spare, the American stock can not now be extensive, Mexican supplies are distant owing to the still unsettled condition of the country, and it is the opinion of many that for some time we may count upon an extensive use of silver, either in connection with the continuance of the war expenses, or, in event of peace, to supply the currency needs of countries inadequately supplied with gold, so that there is a very reasonable expectation that current prices may be still maintained, or may indeed go even higher than the figures reached in the year just concluded.

Highest, lowest, and average price of silver bullion in London, and the United States equivalent value of a fine ounce each month.

Average commercial ratio of silver to gold each calendar year since 1687.

[NOTE.—From 1687 to 1832 the ratios are taken from Dr. A. Soetbeer, from 1833 to 1878 from Pixley and Abell's tables, from 1879 to 1896 from daily cablegrams from London to the Bureau of the Mint, and since from daily London quotations.]

VALUES OF FOREIGN COINS.

The following values calculated by the Director of the Mint were proclaimed by the Secretary of the Treasury under the provisions of section 25 of the act of August 27, 1894, as the basis for estimating the value of foreign merchandise exported to the United States during the quarter beginning October 1, 1917:

Country.	Legal standard.	Monetary unit.	Value in terms of United States money.	Remarks. ¹	
Argentine Republic.....	Gold.....	Peso.....	\$0.9648	Currency: Depreciated paper, convertible at 44 per cent of face value; exchange rate about \$0.429.	
Austria-Hungary.....	do.....	Crown.....	.2026	Greatly depreciated; no quotations.	
Belgium.....	Gold and silver	Franc.....	.1930	Member of Latin Union; gold is the actual standard.	
Bolivia.....	Gold.....	Boliviano.....	.3893	12½ bolivianos equal 1 pound sterling.	
Brazil.....	do.....	Milreis.....	.5462	Currency: Government paper; exchange rate about 25 cents to the milreis.	
British Colonies in Australasia and Africa.	do.....	Pound sterling.....	4.8665		
Canada.....	do.....	Dollar.....	1.0000		
Central American States:					
Costa Rica.....	do.....	Colon.....	.4653	Exchange rate \$0.263=1 colon.	
British Honduras.....	do.....	Dollar.....	1.0000		
Nicaragua.....	do.....	Cordoba.....	1.0000	Exchange rate \$1=1.01 cordobas.	
Guatemala.....	Silver.....	Peso.....	.7105	Guatemala: Currency, inconvertible paper, exchange rate about 38 pesos equal \$1.	
Honduras.....				Honduras: Currency, bank notes; exchange rate about \$0.40.	
Salvador.....				Salvador: Currency, convertible into silver on demand; exchange rate about \$0.365.	
Chile.....	Gold.....	do.....	.3650	Currency: Inconvertible paper; exchange rate approximately \$0.296.	
China.....	Silver.....	Tael.....	Amoy.....	1.1647	The tael is a unit of weight; not a coin. The customs unit is the Haikwan tael. The values of other taels are based on their relation to the value of the Haikwan tael.

MONETARY LEGISLATION.

[PUBLIC—No. 27—65TH CONGRESS.]

[H. R. 3548.]

AN ACT Providing for the modification of the designs of the current quarter dollar.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That for the purpose of increasing the artistic merit of the current quarter dollar, the Secretary of the Treasury be, and he is hereby, authorized to make slight modifications in the details of the designs in accordance with sketches submitted by the sculptor whose models were accepted under date of May twenty-third, nineteen hundred and sixteen, and now being used in the execution of the coins.

No changes shall be made in the emblems or devices used. The modifications shall consist of the changing of the position of the eagle, the rearrangement of the stars and lettering, and a slight concavity given to the surface. Such changes shall be made and completed on or before July first, nineteen hundred and eighteen.

Approved, July 9, 1917.

FOREIGN AND WORLD MONETARY STATISTICS.

The statistics of foreign countries on production, import, and export of gold and silver, coinage and stocks of money, published annually in the reports of the Bureau of the Mint, are obtained, so far as practicable, directly from the Governments of such countries by the representatives of the United States accredited to them.

A list of interrogatories covering the points on which information is sought is sent yearly to the United States ambassadors and ministers through the Department of State, and the replies in the form of reports are forwarded directly to the Bureau of the Mint.

In the absence of official returns from foreign countries the most reliable data available are used in compiling world statistics.

Receipts of replies to the interrogatories have been limited or delayed in transmission and the available data covering stocks of money in the different countries of the world as of December 31, 1916, are so meager and so generally unsatisfactory as not to warrant preparation of the usual table showing comparative figures and their aggregates.

Such information as is available follows:

¹ Value at \$20.671834 per fine ounce.

² Value at 65.661 cents per fine ounce.

GOLD.

[From preliminary report of the mineral production of Canada during the calendar year 1916.]

The total production of gold in placer and mill bullion and in smelter production in 1916 is estimated at 926,963 fine ounces valued at \$19,162,025, as compared with 918,056 fine ounces valued at \$18,977,901 in 1915, an increase of \$184,124, or about 1 per cent. It is the largest production since 1902. The highest production recorded was \$27,908,153 in 1900, and the lowest since then was \$8,382,780 in 1907.

Of the total production in 1916, \$4,957,663, or 26 per cent, were derived from placer and alluvial mining; \$10,472,723, or 54 per cent in bullion and refined gold, and \$3,731,639, or 20 per cent, contained in matte, blister copper, residues, and ores exported.

The production in Nova Scotia was about \$103,359, a decrease of 24.4 per cent from that of 1915 and was due to the water shortage, which interfered seriously with the operations of the hydroelectric plants.

The production in Quebec is derived from the pyrites ores of the eastern townships. The gold content of these ores is very low and is not paid for to the mine operators.

Ontario is, since 1914, the largest gold-producing Province in Canada. The production for 1916 was 489,679 fine ounces, valued at \$10,122,563, being 52.8 per cent of the total production for Canada and an increase of 20.4 per cent over that of 1915 and 82 per cent over the production of 1914.

The Hollinger Consolidated mines contributed about 48 per cent of the output and the Dome about 21 per cent.

Apart from a very small recovery of alluvial gold in Alberta, no production is recorded from this Province nor from Manitoba or Saskatchewan.

The production in British Columbia was about \$4,520,868, as against \$5,651,184 in 1915, a decrease of 20 per cent; this total includes \$575,000 estimated by the provincial mineralogist as being the output of placer mining and \$3,945,000 recovered from milling and smelting operations.

The production from the Yukon Territory amounted to \$4,391,669, as against \$4,750,450 in 1915, a decrease of 7.5 per cent, and was derived from the alluvial deposits with the exception of about \$9,000, which was produced from the gold and copper ores of Whitehorse and the silver-lead ores of the Silver King mine near Mayo.

The exports of gold-bearing dust, nuggets, gold in ore, etc., in 1916, are reported by the customs department as \$18,382,903.

SILVER.

The production of silver in 1916 was 25,669,172 fine ounces, valued at \$16,854,635, as against 26,625,960 fine ounces, valued at \$13,228,842 in 1915, a decrease of 3.6 per cent in quantity, but an increase of 27 per cent in value.

The production in Ontario amounted to 21,975,942 ounces, valued at \$14,429,623, or 85.6 per cent of the total production for Canada. The production from the ores of Cobalt and adjoining silver camps was 21,885,057 ounces, including 18,418,392 ounces in bullion recovered in smelters and reduction plants in Canada and 3,466,665 ounces estimated as recovered from ores exported to the United States smelters, thus 84 per cent being recovered as bullion in Canada; of this bullion 9,665,516 ounces were recovered in southern Ontario smelters and 8,752,876 ounces in the mills of Cobalt. The balance of the Ontario production—90,886 ounces—was the output of the gold and copper mines.

The production in Quebec was about 97,000 ounces, valued at \$63,691, as against 63,450 ounces, valued at \$31,524, in 1915, and is derived from the pyritic ores of the eastern townships and the zinc-lead ores of Notre Dame des Angers.

In British Columbia the production was 3,235,764 ounces, valued at \$2,124,635, as against 3,568,852 ounces, valued at \$1,771,658, in 1915, showing a decrease in quantity of about 9 per cent and an increase in value of about 20 per cent. This production includes refined silver, silver contained in smelter products, and estimated recoveries from ores exported.

The Yukon production was 360,466 ounces, valued at \$236,686, as against 248,049 ounces, valued at \$123,241, in 1915, an increase in quantity of about 45 per cent and in value of about 92 per cent. The 1916 production includes 47,703 ounces derived from the placer operations, the balance being the product of the gold and copper mines of the Whitehorse district and the high-grade gold-silver-lead mines of Mayo.

The exports of silver bullion and silver in ore, etc., as reported by the customs department were: 25,279,359 ounces, valued at \$15,637,885, as against 27,672,481 ounces, valued at \$13,812,038, in 1915.

Silver ores.....			2,069,728.50	1,031,759.66

There are no data for rendering these figures by the States of procedure and of destination.

The value of the importations are those given by the importers. The values of the exportations were calculated at 1,333 pesos (\$664.50) per kilogram of gold and at 41 pesos (\$20.44) per kilogram of silver. The silver imports are included in the gold imports.

The customhouses at Mazatlan and La Paz were not taken into consideration in the exportations, they not having rendered their figures opportunely.

NEW DENOMINATION OF COIN.

A gold coin of the denomination of 20 pesos, established in accordance with the decree of June 27, 1917, will have a diameter of 27½ millimeters; the tolerance in the weight of the unit will be 40 milligrams overweight or underweight, according to the theoretical weight of 16½ grams, and the tolerance, above or below, according to the law will be one one-thousandth according to the theoretical law of nine hundred thousandths.

NOTE.—By decree of Oct. 15, 1914, the alloy for the bronze coins is fixed at 95 parts copper, 2½ parts tin, and 2½ parts zinc, with a tolerance of 1 per cent in each metal; and a bronze coin of 5 centavos was established with the weight of 9 grams and diameter of 28 millimeters.

MONEY SITUATION.

[From Consul William W. Canada, Vera Cruz, Mexico, Jan. 2, 1917.]

For the past two or three years the people in general in Mexico have been retaining all of the metallic currency that came into their possession, which resulted in the bills being the only money in circulation until recently.

The last issue of paper money, known as "infalsificable" ("uncounterfeitable"), placed in circulation by the de facto Government in June, 1916, on a basis of 20 centavos Mexican gold on the peso, is now refused by the public. A few months ago, on account of the depreciation of this currency, the Government adopted the plan of naming, for commercial transactions, the official rate of exchange every 10 days at which the public are supposed to accept the "infalsificables" which it now quotes at 150 to 1, or 0.66 of a cent Mexican gold a peso, but some weeks ago the purchasing power of these bills in buying American money had depreciated until they reached rates ranging from 350 to 400 pesos for \$1. Then the people declined to accept the paper.

No action is taken by the authorities to oblige the people to accept the money, as they did in the case of the Vera Cruz bills directly after the "infalsificables" were placed in circulation, and the Vera Cruz paper depreciated to about 400 to 1 for American money. Until the last-named Mexican currency was officially retired, persons who declined to accept same were imprisoned and heavily fined.

The action of the Government not long since in requiring that customs duties, land taxes, postage, telegraph charges, etc., be paid in national gold and silver, resulted in considerable of this currency being placed in circulation again by the people, but not enough to meet the demands, as there does not appear to be sufficient of this money in the country. Before this action was taken, the customs charges were payable in either Mexican coin or American money on the basis of one dollar for 2 pesos and when the notice decreeing duties payable only in Mexican metallic currency went into effect, it created a demand for this money so far in excess of the supply that the price thereof at once rose to several points above par in the local market. The silver peso and 50-cent pieces, and the 5 and 10 peso gold pieces sold here as high as 57 cents United States currency per peso. Subsequently, the Government decreed that 50 per cent of the customs duties might be paid in American money and that the balance would be required in Mexican silver and gold. However, as there is still not sufficient of the latter coin for all purposes, the price is high as 56 cents.

To relieve the shortage of money here, the Government is encouraging the importation of American currency, as shown by the decree quoted in the report from this consulate under date of December 14, 1916. There have been several shipments of United States currency imported into Mexico through this port within the last few weeks by local firms, but very little of the money has been put in circulation.

DOMINICAN REPUBLIC.

SANTO DOMINGO.

GOLD AND SILVER USED IN THE INDUSTRIAL ARTS.

There are no official data. There must be very little gold and silver used in the industrial arts, because almost all the jewelry is imported. They do repair work only in the country.

IMPORT OF UNITED STATES GOLD COIN.

Unknown. The customhouse registers only the amount of pesos without specification of the quantity in metal of gold or silver, or in bank notes.

PRODUCTION OF GOLD AND SILVER.

Although there are gold and silver mines in the country there are none under development. They extract washed gold from alluvions in the placers of different rivers without restriction. There are no official data of the quantities extracted annually.

STOCK OF GOLD IN THE COUNTRY.

There was no gold coin in banks or in the public treasury on December 31, 1916.

BANK NOTES OUTSTANDING.

The Government has no legalized issue of paper money. There is only a bank of issue and they have not as yet issued notes.

THE ACTUAL CURRENCY OF THE COUNTRY.

The standard for the country established by law is the gold peso. Silver coins issued during the past century had an alloy of approximately 80 per cent of copper, consisting of pieces of "1 peso," "half-peso," "20 centavos," and "10 centavos." The Government that issued them indicated that the fineness reduced their value to 20 centavos for each gold peso, and the official and commercial exchange, without fluctuations, has been 5 pesos in national silver coin for 1 peso in American gold. There is in the country, besides, a small amount of national nickel and copper fractional coins of "5 centavos" and "2½ centavos."

The United States Military Government states that in April, 1917, the approximate amount of national Dominican coin, in silver, nickel, and copper in circulation in the Republic was equivalent to about \$500,000 American gold. Also, that it is impossible to make any approximate estimate whatever of the quantity of gold existing in the country, but relatively it must be very small; in regard to paper money in the country, only American bank notes and American silver certificates circulate, of which there may be nearly \$500,000.

HAITI.

IMPORT OF UNITED STATES GOLD COIN DURING THE CALENDAR YEAR 1916.

United States gold coin was imported during the year 1916 to the amount of \$253,400. There is no mint here.

Law passed in 1916 for the issue of new notes in place of damaged notes, as follows:

THE GOVERNMENT NOTES ACT, No. 20 (Nov. 18, 1916).

Whereas it is expedient to make provision to enable the withdrawal from circulation of damaged Bermuda Government notes:

Be it, therefore, enacted by the Governor, Legislative Council, and Assembly of the Bermudas or Somers Islands as follows:

1. It shall be lawful for the governor in council from time to time to make regulations dealing with the withdrawal from circulation and the canceling of damaged or defaced Bermuda Government £1 notes and the issue of new notes in place thereof, and such regulations shall come into operation on their publication in the Gazette.

TRINIDAD.

GOLD AND SILVER USED IN THE INDUSTRIAL ARTS.

There are no precious metals mined in Trinidad and the use of such for industrial arts is of insignificant amount, most articles, such as jewelry containing gold and silver, being imported and made locally. Except for a very small use of gold in local dentistry, obtained by melting coins, there is practically no use of precious metals in local arts.

The amount of United States gold coin imported during the calendar year 1916 was £80,295 (\$390,756). There is no mint in Trinidad, and there was no United States coin melted.

PREMIUM ON GOLD.

Venezuelan merchants occasionally pay a premium up to 3 per cent.

THE ACTUAL CURRENCY OF THE COUNTRY.

Accounts are kept in dollars and cents at the rate of \$4.80 to the pound sterling. British silver is the currency of the British West Indies and is legal tender for any amount. The banks import British silver from England, thus supplying the currency of the colony; this is done at the request of the Government.

Government currency notes are also legal tender and are issued in denominations of \$1, \$2, and \$1,000. British gold coin, of which there is not much in circulation, is taken at \$4.80, but is sometimes at a premium owing to the demand for shipment to Venezuela in payment for cocoa shipments from that country.

United States gold coin has been proclaimed by the Government as of the value of \$9.84 per eagle (\$10), but it generally passes at par and is sometimes at a premium, owing also to the demand for shipments to Venezuela.

The two banks issue their notes of the following denominations: \$5, \$20, and \$100. These notes have a large circulation in the island.

There is a small amount of money brought in by travelers, but traders do not import coin from England, as the rate of exchange is such as to make importation unprofitable.

COINS IN CIRCULATION IN MARTINIQUE.

All of the French coins are in circulation in Martinique to some extent; in addition, two silver pieces are minted specially for Martinique and are used more generally than any other form of money in the ordinary local business of the place. These silver pieces are the Martinique franc and fifty (50) centime. The value of the franc in the ordinary business is twenty (20) cents in American money, that of the 50 centime is ten (10) cents in American money.

Neither coin is accepted outside of Martinique.

EXTRACT FROM LAW OF DECEMBER 30, 1916.

During the course of the year 1916 the Bank of Martinique has been authorized as follows:

First. By derogation of Article IV of the law of December 13, 1901, to issue notes according to the needs of the circulation, the portion that exceeds the quadruple of the metallic reserve to be covered beforehand by the bonds of the national defense deposited in the public treasury at Paris.

Second. To issue for 600,000 francs paper bonds of 1 and 2 francs (300,000 of 1 franc and 300,000 of 2 francs), guaranteed by the values of the French State to a value at least equal and placing it especially in reserve in the coffers of the treasury paymaster of the colony for this effect.

Finally, the law of December 30, 1916, has prolonged up to December, 1918, the bank privilege, which would expire on December 30, 1916.

ARTICLE IV OF THE LAW OF DECEMBER 13, 1901.

I. Each one of the banks to which this law relates is authorized, to the exclusion of all establishments, to issue in the colony where situated, notes to bearer of 500 francs, 25 francs, and 5 francs.

II. These notes are reimbursed at sight at the place of the bank that issued them.

III. For the type of 5 francs, the notes will not be reimbursed at sight except in groups of 25 francs.

IV. They are to be received as legal money in the extent of each colony by the public treasuries as well as by individuals.

V. In the event of liquidation, the Minister of the Colonies is to determine in agreement with the Minister of Finances the conditions of the circulation and of the reimbursement of the notes of the bank.

VI. The amount in circulation must not in each case exceed the triple of the metallic reserve.

VII. The bank must not borrow upon the notes to order subscribed by it.

VIII. The accumulated amount of notes in circulation of the current accounts and of the other debts of the bank must not exceed the triple of the firm's capital and of the reserve funds, unless the countervalue of the current accounts and of the other debts are not represented by the small coins coming in to increase the metallic reserve.

United States of America.....	\$6,000	\$41,845	\$5,000

SALVADOR.

COINAGE IN 1916.

There has been coined abroad for this country a nominal sum of 140,000 pesos (Salvadorean money), equivalent to \$79,520 in United States currency, in nickel coins.

UNITED STATES GOLD COIN IMPORTED DURING THE CALENDAR YEAR 1916.

This office is informed that the Banco Salvadoreño introduced into this country the sum of \$275,000 in United States gold coins.

Production of gold and silver during the calendar year 1916.

Mines.	Gold.		Silver.	
	Grams.	Equivalent in ounces.	Grams.	Equivalent in ounces.
San Sebastian.....	784,358	25,217.894		
Divisadero.....	372,000	11,960.172	22,320	717.610

On the 31st of December the banks had in their vaults the following quantities of coined gold and silver:

Name of bank.	Gold.		Silver.	
	Pesos.	United States equivalent.	Pesos.	United States equivalent.
Banco Salvadoreño.....	277,489.00	\$162,609	1,744,480.66	\$990,865
Banco Occidental.....			2,210,561.73	1,255,599
Banco Agricola Comercial.....			873,308.53	496,039

It is not possible to estimate the amount of silver in circulation.

The circulation in paper bills of the three above-mentioned banks, on December 31, 1916, was as follows:

Name of bank.	Pesos.	United States equivalent.
Banco Salvadoreño.....	4, 013, 800	\$2, 279, 838
Banco Occidental.....	3, 665, 155	2, 081, 808
Banco Agrícola.....	1, 930, 000	1, 096, 240

The banks, according to computation, guarantee their circulation with 57.40 per cent in specie. The law requires 40 per cent.

Exchange at sight on New York in 1916 was as follows: Maximum, 293 per cent; minimum, 289 per cent.

Export of gold and silver in 1916.

Country and classification.	Kilograms.	Equivalent in ounces.
To the United States:		
Gold bars.....	2, 830	90, 987.330
Silver bars.....	912	29, 320.712
Auriferous silver ore.....	43, 734	1, 406, 091.834
To Great Britain:		
Auriferous silver ore.....	41	1, 318.191

(44 per cent of face value) ⁴	438, 652, 276.000		121, 816, 962.000

¹ Highest issue. Convertible for gold at 44 per cent of face value.

² In the Caja de Conversion 260,320,952.285 gold pesos; in the Argentine legations 56,514,373.620 gold pesos.

³ For their conversion there has been established a "fund of conversion," which has been mobilized in part by law 9479; there remains unmobilized 10,000,000 gold pesos.

⁴ By virtue of law 3871 the Caja de Conversion employs 1 paper peso for each 44 centavos in gold received, and vice versa.

CORRECTION.—Information having come to hand from the Government of Argentina that certain figures carried in the report of the Director of the Mint for 1915, as to the stock of money in Argentina on December 31, 1913, were incorrect, this office takes pleasure in publishing the corrected figures furnished, viz (figures converted to United States equivalent of \$0.9648 per peso): Stock of gold (thousands of dollars), 364,668; uncovered paper (thousands of dollars), 282,704; population (thousands), 7,885; per capita gold, \$46.25; per capita paper, \$35.85; total per capita, \$82.10.

THE NATIONAL BANK.

[From "Economic and Financial Review," Buenos Aires, Apr. 5, 1916.]

In February, 1916, there existed in the coffers of the Bank of the Nation 355,927,259.38 pesos in national money, viz, paper, nickel, and copper, and 10,067,995.89 gold pesos; there was also credit for 20,000,000 pesos of mobilization of the fund for conversion, by decision of law No. 9479, and the 16,580,385.54 gold pesos with which to draw on foreign correspondents.

The account of interests gave a balance of 426,004.55 pesos in national money, besides accumulating amounts corresponding to the accounts of bills of receipt of the debtors of administration, of national mortgage certificates, series "A," chattels and commodities, judicial expenses, conversion, and those of pending operations in branches of the bank, of 128,000,000 pesos in national money, the reserve fund of 14,565,407.14 gold pesos, the conversion fund (law 3871) with 852,859.05 gold pesos, and the conversion of funds by the law No. 9479, which represents 45,454,545.45 pesos in national money—all figure in the bank's balance.

The account of deposits in their separate classes—at sight and fixed place, judicial, and in custody (compensation house)—aggregate a balance of 686,745.74 pesos in national money and 3,667,714.41 gold pesos.

Completing that portion of the balance, the account of the national bank in settling up is with 199,093.38 pesos in national money; that of commissions, interests, and discounts with 5,702,452.61 pesos in national money and 6,854.07 gold pesos; that of gains and losses with 421,121.52 pesos, national money, and that of branches "pending operations" with 7,902,502.47 pesos, national money.

They had not yet effected the retirement by decision of law No. 9480 (Apr. 5, 1916); the general circulation, therefore, reached the amount of 1,010,971,271.92 pesos in national money, represented in paper, nickel, and copper.

BRAZIL.

DATA IN RELATION TO THE MONETARY SYSTEM OF BRAZIL.

Decrees No. 559 of December 31, 1898, and No. 640 of November 14, 1899, provided for the minting abroad of nickel coins of 400, 200, and 100 reis face value, weighing 12, 8, and 5 grams, respectively. It was provided that the amount to be coined should be Rs. 20,000,000\$000 and that the contract should be given to the firm that offered the greatest inducements toward its execution.

Decree No. 1453 of December 30, 1905, article 30, authorized the minting of silver coins of the following description, of a face value of 2\$000, 1\$000, and 500 reis:

Denomination of silver coins.	Weight, grams.	Fineass, thousandths.	Diameter.
2\$000 (2,000 reis).....	20.000	900	33
1\$000 (1,000 reis).....	10.000	900	26
500 reis.....	5.000	900	22

SEC. 1. A difference in weight of 1/10th of a gram on the 2.000 reis coins, of 1/20th on the 1.000 reis coin, and of 1/40th on the 500 reis coins shall be allowed; the composition of the alloy shall not vary 1/500th one way or another.

SEC. 2. The coins described in sec. 1 shall bear on their face the effigy of the Republic (Phrygian cap), the date of minting, and the inscription: "Republic of the United States of Brazil"; on the reverse side, in Roman figures, the weight of each coin, its face value, and the words "Ordem e progresso, Novbr. 15, 1889," shall be inscribed.

SEC. 3. Silver coins shall not be received by the executive departments of the Federal Government; neither shall small private parties be obliged to receive such coins in settlement of debts (except when a mutual arrangement exists therefor) beyond the amount of 20\$000 (see decree 625 of July 28, 1860, art. 2); this provision, however, applies alone to the 2.000 and 1.000 reis coins. The limit for the 500 reis coins shall be 10\$000 reis.

ART. 4. The coins of the old 917 standard shall be melted and recoinced in accordance with the provisions of art. 30, sec. 1. The coining of silver by private parties shall be regarded by art. 4, decree 1083 of August 22, 1860; the Government shall allow it in cases of especial necessity, and the Government shall fix seigniorage which shall revert to the public treasury, according to the rate of exchange and the current price of silver.

PRODUCTION OF GOLD DURING THE CALENDAR YEAR 1916.

[From report of the lands and mines department of British Guiana for the year 1916.]

GOLD OUTPUT.

The amount of gold won from all sources during the year was 37,129 ounces, 6 penny-weights, 21 grains, a considerable decrease on the previous year's production and less than half that produced in 1914-15. The decrease is entirely due to the fact that fewer men have gone into the gold fields during this year. The reason was that the rise in the prices of foodstuffs made it much more difficult for small claim holders and tributers to make a living, whilst the large demand for labor on and around the coast estates at increased rates of pay, and the much greater inducement offered for men to take up agriculture in the villages all tended to deter them from engaging in the less profitable, if at times more alluring, quest of the precious metal.

PLACER WASHING.

This method, which is that entirely used by the local gold digger, was responsible for the production of 24,057 ounces. The entire decrease in the year's output comes under this head, the principal decrease being in the Mazaruni and Cuyuni districts.

DREDGING.

This form of working has been steadily carried on by the two companies operating in the Potaro district, with satisfactory results. The amount of gold produced was 11,967 ounces, which is slightly above the standard of local production by this method. It is also interesting to note that of the 17,575 ounces of gold declared from the entire Potaro district, two-thirds of it was won by dredging.

It is becoming evident that the future of the gold industry of British Guiana lies in dredging; but unfortunately for its development there have been so many sensational and ill-judged ventures in other directions, which have resulted in equally sensational failure, that the steady progress made in dredging has been somewhat obscured and capital has become unnecessarily shy of British Guiana gold investments. The excellent work being carried on by the Guiana Gold Co. and the Minnehaha Development Co. is doing much to restore confidence, however, and I feel sure that as soon as it becomes generally known that this is a gold-dredging country with sound possibilities, there will not be lacking equally sound concerns ready to develop it. It is desirable, therefore, that everything in reason should be done to foster dredging, so that its establishment may be encouraged and its future assured.

QUARTZ MINING.

The operations for reopening the Peters mine, in the Puruni River, by the option holders were closed down in October, 1916, after 1,103 ounces of gold had been won. So far, there is no indication of work being continued in the near future either by the option holders or the owners.

DUTCH GUIANA.

PARAMARIBO.

IMPORT OF UNITED STATES GOLD COIN DURING THE CALENDAR YEAR 1916.

During the year 1916 United States gold coin was imported to the value of \$16,000. There is no mint here.

PARAGUAY.

Approximate stock of gold coin in the country on Dec. 31, 1916.

Classification.	In public treasuries.	United States equivalent.	In banks.	United States equivalent.
	Pesos.		Pesos.	
Gold coin ¹	470,348	² \$453,792	1,172,632	² \$1,131,355

¹ Practically all foreign gold coin.

² At Argentine gold peso valuation of \$0.9648.

NOTE.—A small amount of foreign gold coin was in circulation, but there are no statistics thereon (estimated at about 200,000 pesos in 1915).

Notes outstanding at the end of the year 1916.

Designation.	Gold reserve in coin and bullion.	Notes out- standing.	Uncovered notes in circulation.
Government notes.....	Pesos. 1 470,348	Pesos. 2 125,000,000	Pesos. 108,537,820

¹ Covering notes to the value of 16,462,180 pesos.

² Of which 65,146,466 pesos was in banks and 16,022,142 pesos was in the Office for Exchanges.

Premium on gold during the calendar year 1916: Highest, 40 to 1; lowest, 25 to 1; average, 27.6 to 1. At present (Mar. 27, 1917), about 38 Paraguayan pesos to \$1 of the United States. Value is constantly fluctuating.

THE ACTUAL CURRENCY OF THE COUNTRY.

There is practically no domestic coin in circulation in Paraguay. No coinage of valuable metals has taken place here for many years and there has been no recent coinage of base metals; as to the latter, Paraguayan money has so depreciated in value that the commercial worth of the fractional coins exceed their monetary value and, accordingly, in time past, many of them have been sold for junk. The small number of Paraguayan coins still outstanding are held as curios and souvenirs and are never encountered in circulation. There is no mint in Paraguay.

IMPORTS AND EXPORTS OF GOLD AND SILVER.

There was no import or export of gold. Some gold found its way into Paraguay as the result of commercial transactions, but there are no statistics thereon save as to the amount held in the banks and public treasury, heretofore given. The gold is in Argentine coin, pounds sterling, and United States coin, the latter being small in amount.

The amount of silver coin is altogether negligible, being confined to a small sum in fractional Argentine silver coin.

EXCHANGE OFFICE ESTABLISHED IN PARAGUAY.

[Consul Samuel Hamilton Wiley, Asuncion.]

The question of lowering and stabilizing the rate of exchange between Paraguayan paper currency and gold currency has been for some time the subject of much discussion. Various plans have been formulated with this end in view. The accomplishment of this stabilization is of particular importance to the importers of foreign merchandise in Paraguay. Under the existing conditions of low value of Paraguayan paper currency, and the daily fluctuation of this exchange rate, importers have been unable to buy from the banks foreign exchange for paper currency. For this reason the question of foreign exchange has been a vital factor in the commercial life of the Republic.

On January 20, 1916, the Paraguayan Congress passed a law establishing an office of exchange or conversion. A translation of the law is given below:

FUNCTIONS OF THE EXCHANGE OFFICE.

ARTICLE 1. An institution to be known as an "Office of Exchange" shall be established, whose functions shall be: (a) Buying and selling of gold currency; (b) issuing, exchanging, and converting paper money (the term "exchanging" as used in this subhead refers to the exchanging of deteriorated bills, etc.).

ART. 2. The Office of Exchange shall be administered by a board of directors, composed of five members appointed by the executive, with the approval of the Senate, the members of this board to hold office for one year, with privilege of reappointment.

ART. 3. The Office of Exchange may buy and sell gold currency, make deposits of gold currency in foreign markets, and issue bills of exchange against said funds; and it may discount bills with the funds assigned to it by this law, with the approval of the Ministry of Finance.

FUNDS FOR BUYING GOLD CURRENCY.

ART. 4. For the purpose of buying gold currency the Office of Exchange has at its disposal the following resources in paper currency: (a) Ten million pesos (about \$250,000 United States currency at present actual exchange rate of 4,000 per cent); (b) the amounts received from the sale of gold currency; (c) the available funds on hand in the Banco Agricola (Agricultural Bank).

GOLD RECEIPTS FOR SELLING FUND.

ART. 5. For the operations of selling gold currency the office shall have disposition of the following resources: (a) The gold acquired under the provisions of this law; (b) the receipts in gold currency by the Banco Agricola for commodities exported by said bank; (c) all gold receipts of the Government; (d) other resources to be established by future laws.

ART. 6. The Treasury shall remit to the Office of Exchange the amount of fiscal receipts mentioned in section (c) of article 5 in gold currency or in paper currency at the exchange rate for the sale of gold currency. The Banco Agricola shall remit in the same manner in paper currency against its deliveries in gold at the same rate of exchange and against those that have been made in accordance with section (c), article 4.

NEW ISSUE OF PAPER MONEY AND NICKEL COINS.

ART. 7. The existing issue of paper money and nickel coins shall be replaced by a new issue. To this end the Office of Exchange shall issue bills and nickel coins whose value shall be fixed by the Executive, who shall also determine the date of the replacement of the present issue by that to be issued. The bills and nickel coins not presented for exchange within the first two years after the new coins and bills are issued shall lose 50 per cent of their value and shall lose all their value at the end of three years after the issue of the new coinage.

ART. 8. The function of exchanging deteriorated bills, now in charge of the Banco Agricola, shall pass to the Office of Exchange.

EXCHANGE FUND.

ART. 9. The following funds shall be dedicated to the operations of exchange: (a) Six hundred thousand (600,000) pesos gold currency (\$579,000 United States currency) of the conversion fund mentioned in law 90 of September 25, 1914; (b) the export tax of 1 peso gold currency (\$0.965 United States currency) each on cattle hides after the Government has finished paying its indebtedness to the Bank of the Republic; (c) the additional export tax placed on hides created by law 172 of December 24, 1915; (d) the balance of the loan authorized by the law of November 28, 1912; (e) other resources to be established by future laws.

ART. 10. The date on which the Office of Exchange shall begin operation and the rate of exchange between paper and gold currency shall be established by another law. Meanwhile the Office of Exchange may employ the conversion funds in the buying and selling of gold currency authorized by this law.

PAPER CURRENCY EXCHANGED FOR GOLD.

ART. 11. When the operations of conversion have been initiated, the Office of Exchange shall pay, on request, gold currency for paper currency. The paper currency taken in this way by the exchange office shall not enter into circulation again, except in exchange for gold currency. The exchange office will therefore be obliged to exchange gold currency for paper currency, which paper currency will be issued in case the amount now in circulation shall not prove sufficient.

ART. 12. The Office of Exchange shall destroy weekly, by fire, the paper money received from additional import duties to be established in the general budget.

REGULATION OF PAYMENT OF EXPORT DUTIES.

ART. 13. From the date of the enforcement of this law the exportation of cattle hides, tobacco, yerba maté, and tannin shall be subject to the following conditions: Besides the export duties established, the exporter shall deliver to the exchange office gold currency or notes of not more than 90 days' sight to the amount of 20 per cent of the price current of the commodity exported in the market of consumption, receiving in exchange paper currency at the exchange rate of gold currency of the exchange office, with a deduction in the rate not to exceed 4 per cent.

CONDITIONS ACCOMPANYING THE EXCHANGE LAW.

ART. 14. The board of directors of the Office of Exchange shall have the power to indorse bills and may appear in court personally or by power of attorney for the collection thereof.

ART. 15. The exchange office shall send daily to the Minister of Finance a statement of funds on hand and of the operations of buying and selling drafts, and shall furnish an annual balance and report.

ART. 16. The executive is authorized to provide the funds necessary for putting into operation this law, charging the same in the general expense budget.

ART. 17. All laws and provisions contrary to the provisions of this law are declared abolished.

SITUATION OF THE PARAGUAYAN BANKS ON DEC. 31, 1914-1916.

¹ Argentine gold peso valuation, \$0.9648.

² Exchange valuation is 35 paper pesos for each gold peso.

The visible metallic stock existing in the Republic on December 31, 1916, was apportioned as follows:

Years.	In the Exchanges Office. ¹	In banks.
1914.....	<i>Pesos.</i> 757, 827	<i>Pesos.</i> 551, 270
1915.....	757, 827	893, 951
1916.....	470, 348	1, 172, 632

¹ The Exchanges Office, a national institution, according to law No. 182, was constituted with 10,000,000 paper pesos and 600,000 gold pesos, balance of the conversion funds, to which on Dec. 31, 1916, there corresponded besides 68,909 gold pesos, being the value of the additional tax on the exportation of animal skins, instituted by law No. 172 for the purpose of reinforcing the conversion funds. The law (No. 193) of Feb. 15, 1916, appropriated the amount of \$157,827 for general expenses of the conversion funds, the balance passing to the Exchanges Office.

The amount of paper money not covered by the reserve is \$108,537,820 (in Paraguayan pesos), estimating that the reserve of \$470,348 covers \$16,462,180 at the present rate of exchange of 35 paper pesos for each gold peso.

Of the amount of \$125,000,000, which represents the total issue of notes, \$65,146,466, or more than half of the amount estimated as existing, is in the banks and \$16,022,142 is in the official institution created to regulate the exchange, called "Office of Exchanges."

United States equivalent		\$160,630		\$1,046,029

¹ In two refineries by-products (from copper ores) have besides been produced containing 15 kilograms of fine gold and 3,860 kilograms of fine silver, which is equivalent to 482.265 fine ounces and 124,102.86 fine ounces, respectively.

Approximate stock of gold and silver coin and bullion in the country on December 31, 1915: "Inasmuch as the greatest portion of the gold and silver on hand belongs to the metal assets of the Austro-Hungarian Bank, and bank statements have not been published since the beginning of the war, information can not be given in this connection."

NOTE.—"For the above-stated reasons for keeping the bank statement secret, the amount of the bank notes in circulation at the end of 1915 can not be given."

Premium on gold during the calendar year 1915: This question can not be answered owing to a lack of tangible figures, since a regular circulation of national gold coin does not prevail here owing to the concentration of gold reserves at the note-issuing bank. The foreign exchange in its relation to the different countries shows, however, such different deviations from the coin parity that it expresses the absolute irregularity of the market conditions as a sequence of the constriction in international credit relations, the restrictions upon foreign commerce and the gold export prohibitions in consequence of the war. Statements in figures can not be given for a lack of official quotations owing to the bourses being closed.

LAWS PASSED DURING THE YEAR 1915 AFFECTING THE COINAGE, CURRENCY, OR BANKING.

(1) Decree of the Ministry of Finance, No. 71, of March 3, 1915, relating to the prohibition of export and transit of gold and silver coin.

(2) Decree of the Ministry of Finance in agreement with the Ministry of the Interior, No. 85, of March 27, 1915, relating to the prohibition of trading in margins in the national coin of the crown standard.

(3) Decree of the Ministry of Finance, No. 112, of May 7, 1915, regarding the coinage and issue of fractional coins of the crown standard:

"It is agreed to coin up to the amount of 20,000,000 crowns, divisional coins of ten (10) hellers and likewise, eventually, of twenty (20) hellers, to contain 50 parts of copper, 40 parts of zinc, and 10 parts of nickel.

"The circulation of these coins shall be lawful in both States of the Empire, viz: 14,000,000 crowns for circulation in the Kingdom of Austria and 6,000,000 crowns for circulation in the Holy Hungarian Empire."

"Owing to a law which appeared in the Official Gazette of the Principality of Liechtenstein No. 5, of 1912, two (2) crown pieces have been coined in accordance with the law of November 29, 1912, of the weight and fineness of the crown standard of the Austro-Hungarian Monarchy," as follows:

Additional coin for the Principality of Liechtenstein.

UNITED STATES GOLD COIN IMPORTED DURING THE CALENDAR YEAR 1916.

The Paris mint received and melted in 1916 one coin of ten dollars (\$10) and one of twenty dollars (\$20). French statistics do not show the quantity of American gold bullion that may have been imported into France.

APPROXIMATE STOCK OF GOLD AND SILVER ON DECEMBER 30, 1916.

The most recent monetary inquiry, which took place in 1909, revealed the existence of the following quantities in France of gold and silver coins:

Classification.	Value.	United States equivalent.
	<i>Francs.</i>	
Gold coins.....	4,800,000,000	\$926,400,000
Silver coins.....	2,130,000,000	411,000,000

Since that date more than 800,000,000 francs (equivalent to \$154,400,000) in gold coins have been issued, including remeltings.

With regard to silver coins, after deducting those which have been remelted, the total new issue amounts to 185,000,000 francs (equivalent to \$35,705,000), the greater part of which has been effected in the course of the last two years.

METAL RESERVE OF BANK OF FRANCE DECEMBER 28, 1916.

On the 28th of December, 1916, the total metallic reserve of the Bank of France amounted to 5,370,783,747.42 francs (equivalent to \$1,036,561,263), made up as follows:

Designation.	Value.	United States equivalent.
	<i>Francs.</i>	
Gold:		
In hand.....	3,382,826,828.09	\$652,885,578
Abroad.....	1,693,087,732.77	326,765,932
Total.....	5,075,914,560.86	979,651,510
Silver: In hand.....	294,869,186.56	56,909,753

The respective quantities of coin and bullion have not been indicated.

On December 30, 1916, the statement of the Bank of Algeria showed a quantity of metallic reserve of 72,711,213.64 francs (equivalent to \$14,033,264).

Notes outstanding at the end of the year 1916.

Designation.	Notes outstanding.	United States equivalent.
Bank of France notes ¹	<i>Francs.</i> 16,678,817,915	\$3,219,011,858

¹ The Bank of France alone enjoys the privilege of issuing notes payable at sight and to bearer.

Amount of notes not covered by metallic reserve, 11,308,034,168 francs (equivalent to \$2,182,450,594).

By virtue of a decree passed on March 15, 1916, the total value of notes that the Bank is authorized to issue has been raised to 18,000,000,000 francs (equivalent to \$3,474,000,000).

The premium on gold has not been quoted at the Paris Bourse during the year 1916.

Imports and exports of silver during the calendar year 1916.

NOTE.—Customs statistics do not give the importation of gold and silver in detail by countries. The figures for the import and export of gold will be furnished later.

OPERATIONS OF THE BANK OF FRANCE DURING THE YEAR 1916.

[From statement in behalf of the general counsel of the Bank of France and report of the honorable censors Paris, 1917.]

* * * * *

METALLIC RESERVES.

Notwithstanding that the actual outflow of gold since the commencement of the war has amounted to 1,057,000,000 francs (\$204,001,000), our gold reserves at the end of 1916 were 5,082,000,000 francs (\$980,826,000), of which 3,489,000,000 francs (\$673,377,000) were in our own vaults and 1,593,000,000 francs (\$307,449,000) were on deposit in outside banks.

In our summary the amount of metallic reserves is not materially modified over that of last year, as shown by the following:

Metallic reserve.	Francs.	United States equivalent.
Dec. 24, 1915.....		
Dec. 23, 1916.....	5,431,400,000	\$1,048,260,200
Decrease.....	5,379,000,000	1,038,147,000
Gold reserve—		
Passed from.....	52,400,000	10,113,200
To.....		
Net increase.....	5,079,700,000	980,382,100
	5,082,300,000	980,883,900
Silver reserve—		
Passed from.....	2,600,000	501,800
To.....		
Net decrease.....	351,700,000	980,382,100
	296,700,000	57,263,100
	55,000,000	10,615,000

These figures give only an imperfect idea of the movement of our metallic reserves in the course of the year 1916, especially in that of the gold reserve. The total receipts have, in reality, reached 483,672,000 francs (\$93,348,696), more than compensating for the outflow, amounting to 481,072,000 francs (\$92,846,896).

On December 23, 1916, our gold reserve was distributed as follows:

Gold reserve.	Francs.	United States. equivalent.
Gold in the Bank's coffers.....	3,489,598,388.88	\$673,492,489.05
Gold in outside banks.....	1,592,680,318.18	307,387,301.41
Total.....	5,082,278,707.06	980,879,790.46

Our silver reserve suffered an important decrease of 55,000,000 francs (\$10,615,000), which bore, at that time, upon the fractional coins and écus (5-franc pieces). We have put into circulation new coinages together with the silver coins which may still be found distributed among the various cash funds of our counting houses; our silver reserve is still found very materially reduced.

The écus have been, for the most part, remitted to the workshops of the mint for coinage into fractional pieces. The demand for these fractional coins, always considerable, has been unusually large. In certain districts this demand may be explained by the increase of cash transactions; in many others, by a heedless, aggravating hoarding, so that, we regret to say, the situation became so critical that the chambers of commerce had to issue, to a certain extent, small denominations for local circulation.

ISSUE OF NOTES.

The amount of the notes issued in the year 1916 was as follows:

Denomination.	Value.	Value in United States money.
	<i>Francs.</i>	
1,000francs.....	850,000,000	\$164,050,000
500francs.....	150,000,000	28,950,000
100francs.....	1,290,000,000	248,970,000
50francs.....	800,000,000	154,400,000
20francs.....	754,000,000	145,522,000
10francs.....	279,500,000	53,943,500
5francs.....	483,625,000	93,339,625
Total.....	4,607,125,000	889,175,125

In 1915 the issues amounted to 4,572,750,000 francs (\$882,540,750); there was, therefore, an increase in 1916 of 34,375,000 francs (\$6,634,375).

CIRCULATION OF NOTES.

On December 23, 1916, the circulation of notes was composed of the following:

Denomination.	Value.	Value in United States money.
	<i>Francs.</i>	
1,000francs.....	3,510,640,000	\$677,553,520
500francs.....	652,834,500	125,997,059
100francs.....	6,784,398,000	1,309,388,814
50francs.....	2,971,054,800	573,413,576
25francs.....	377,875	72,930
20francs.....	1,624,328,960	313,495,489
10francs.....	206,220,970	39,800,647
5francs.....	835,615,005	161,273,696
Total.....	16,585,470,110	3,200,995,731
Payments on notes not yet reimbursed, effected by the treasury in execution of the convention of Nov. 28, 1916, deducted.....	5,000,000	965,000
Total net circulation.....	16,580,470,110	\$3,200,030,731

A decree of March 15, 1916, rendered by the State council, upon the proposal of the minister of finance, conformably to article 1st of the law of August 5, 1914, raised the limit of the note circulation to 18,000,000,000 francs (\$3,474,000,000).

BONDS AND OBLIGATIONS FOR THE NATIONAL DEFENSE.

The amount of the bonds and obligations for the national defense subscribed for at our wickets in 1916 attained the sum of 3,705,000,000 francs (\$715,065,000), carrying to 5,942,000,000 francs (\$1,146,806,000) the total of indentures of the two categories placed through our solicitation since the beginning of the war.

But the success of our efforts was manifested more especially at the time of the second loan, issued on October 5 and 29 last. The nominal capital of the subscriptions transmitted by us to the treasury is nearly 4,000,000,000 francs (exactly, 3,948,000,000 francs, (\$675,114,000)), being more than one-third of the total loan and 1,000,000,000 francs more than that of the loan of 1915, although at that time the income of 3 per cent was not admitted to the conversion.

During the course of the year 1916 the subscriptions and renewals of bonds of the national defense reached the following amounts:

At the Paris bank, 1,704,740,500 francs (\$329,014,916); in the bank's branches, 1,870,303,900 francs (\$360,968,653); total, 3,575,044,400 francs (\$689,983,569), against 1,901,196,500 francs (\$366,930,924) in 1915, being an increase of 1,673,847,900 francs (\$323,052,645).

This considerable increase shows how much the public appreciates the advantages of the bonds of the national defense, which, as they know, are admitted into our discounts when they have not run more than three months and upon which the Bank consents to advance up to the amount of 80 per cent at all times.

Independently of the direct cooperation of the national treasury, we have cooperated in the making of advances to the Government's allies by discounting to Russia 1,000,000,000 of French treasury bonds. On December 23 the total amount of these discounts since the beginning of the war amounted to 1,730,000,000 francs (\$333,890,000).

GIBRALTAR (SPAIN).

There is no mint here.

NOTES OUTSTANDING AT THE END OF THE YEAR 1916.

On August 5, 1914, an ordinance was passed to provide for the issue by the Government of Gibraltar of bank notes to the value of £250,000 (\$1,216,625), of which about £140,000 (\$681,310), are in circulation, the Government of Gibraltar undertaking to redeem the said notes in sterling money for the full face value at a date fixed by His Excellency the Governor. About two-thirds of the value of these notes is covered by gold coin deposited at the Anglo-Egyptian Bank (Ltd.) in this city.

Although sterling is the legal currency of this colony, Spanish currency is also used by common consent.

Gold is very scarce; silver, copper, and paper circulate.

GREAT BRITAIN.

DECIMALIZATION OF THE BRITISH CURRENCY.

[Consul C. M. Hitch, Nottingham, May 21, 1917.]

There is at present a very strong sentiment among the bankers and business men of Nottingham and vicinity in favor of the decimalization of the British currency, and all available information indicates that this sentiment is general throughout the country. The agitation of this question began as far back as 1880, when the Decimal Coinage Association was formed, and since that time there has been a steady accession to the ranks of those who favor a change in the currency system. It must be admitted that there will be considerable opposition on the part of the masses to any change in the present system of pounds, shillings, and pence, but business firms that are accustomed to dealing in large figures readily appreciate the advantages of the decimal system.

The Association of Chambers of Commerce of the United Kingdom has recently become actively interested in the subject, and at a meeting of the association held on February 7, 1917, a bill was drafted, to be presented to Parliament, which contains the following provisions:

"The sovereign shall remain as hitherto the essential unit of value. The florin, the tenth part of the said sovereign, and the hundredth part of the said florin (hereafter

called the 'British cent') shall become coins of account, and shall be the only coins of account which may be lawfully used as such throughout the United Kingdom.

"The coinage shall consist of the coins as specified in the first schedule of this act, subject to such changes as His Majesty may from time to time by Order in Council determine.

"This act shall come into operation on the 1st day of —, nineteen hundred and seventeen."

NEW COINS SUGGESTED BY ASSOCIATED CHAMBERS OF COMMERCE.

The first schedule of the act above referred to reads as follows:

Coins.	Stand- ard value.	Stand- ard weight.	Coins.	Stand- ard value.	Stand- ard weight.
GOLD.			NICKEL.		
	<i>Florins.</i>	<i>Grams.</i>		<i>Florins.</i>	<i>Grams.</i>
10 florins (sovereign).....	10.00	7.98805	British dime of 10 cents.....	0.10	6.00
5 florins.....	5.00	3.99402	Half dime of 5 cents.....	.05	3.00
SILVER.			BRONZE.		
Double florin.....	2.00	20.00	4 cents (penny).....	.04	10.00
Florin of 100 cents.....	1.00	10.00	Double cent (half penny).....	.02	5.00
Half florin of 50 cents.....	.50	5.00	British cent.....	.01	2.50
Quarter florin of 25 cents.....	.25	2.50			

While the bill as drafted by the Association of Chambers of Commerce refers to the sovereign, or pound sterling, as the "essential unit" of value, it is quite evident that under the scheme proposed the florin would become the standard of value, just as the dollar is the standard of value in the United States. The present British florin (2 shillings) is equivalent to approximately 48 cents in United States currency. In the event of the adoption of the proposed bill by Parliament, all values in the United Kingdom would hereafter be expressed in florins and cents instead of pounds, shillings, and pence.

BANKER'S VIEWS ON PROPOSED LAW.

The various chambers of commerce throughout the United Kingdom are now giving serious consideration to the proposed change in the currency. At a meeting of the Nottingham chamber, held on May 1, a resolution was adopted favoring the passage of the decimalization bill as proposed by Associated Chambers of Commerce. While the resolution was up for discussion a prominent Nottingham banker said:

"I would like it to be clearly understood that I most emphatically and unreservedly am in favor of the decimalization of the coinage. I would like to make it clear at the beginning that I am fully alive to the benefits that are to be derived from the decimal system. The point to be considered at the moment, however, is as to whether it is practicable to adopt such a system at once, as I notice that clause 3 of the bill states that the act will come into operation in 1917. I fully admit that public opinion has developed extensively in favor of the introduction of a decimal system of currency since the Decimal Coinage Association was formed in the eighties, but it must be acknowledged that the mass of the population who will be affected by the change have not given the matter serious thought or consideration.

"Briefly the advantages of the decimal system are: (1) It would materially simplify our bookkeeping. It would also simplify and facilitate our international trade, and enable commercial men to compete on more equal terms with their rivals. (2) It would considerably lower the cost of education and would be a boon and a blessing to children who have to master our present system of currency and weights and measures. It is stated—I don't know with what truth—that one-fifth of a child's time at school is spent in mastering arithmetic. A child would be able to master the decimal system in a comparatively short time.

"Against these must be placed the fact that such change would revolutionize the trade and commerce of the country. It would mean that the whole system of administration as to rates, taxes, and excise duties, when they came to fractions, would have to be changed. It would probably mean that the penny postage stamp would have to be changed also. Again, all ledgers, cashbooks, and other books necessary to a bookkeeping system would have to be altered. Take a simple illustration of the adding machine in use to-day. It would at once become obsolete and have to be replaced by others based on the change of currency. It will give you some idea of what it will mean if you consider that practically every security, whether a share certificate or bearer bond, will have to be converted into florins and the relative coupons

altered accordingly. It would be necessary eventually to alter all bank notes, currency notes, and also all the gold and silver coins in this country. At the same time we must realize that great changes of this kind are always irksome at the moment, but the advantages of a decimal system far outweigh the vast amount of temporary inconvenience we may suffer to secure the facilities which would follow from its adoption. Financiers and merchants like yourselves have all the training and staff necessary to adapt their accounts to any new system of decimals that may be decided upon, however complicated, but this is not the case with the masses who have neither clerks nor calculating tables, and for a decimal system to be popular the masses must be considered first and not second.

"Various systems have from time to time been proposed, but the system outlined in the present bill contains the fewest disadvantages of any system I have come across. I notice that the bill states that the sovereign shall remain, as hitherto, the essential unit of value, but it appears clear that the actual standard or unit of value will be the florin. To my mind the sovereign would be too high, as the mass of people would fail to grasp a value which has to be expressed in four figures. * * * It is therefore satisfactory that the committee has decided that the florin shall be made the standard or unit of the currency.

"While distinctly favoring the change, I am of opinion that at least three years should elapse between the passing of the bill and its actually being put into operation. The three years should be used in disseminating knowledge throughout all classes of the United Kingdom and the advantages to be derived from a decimal system, not only for currency but also for weights and measures."

IMPORT OF FOREIGN COIN PROHIBITED.

By proclamation of March 30, 1917, the importation into the United Kingdom of all coins coined in any foreign country, other than those of gold and silver, was prohibited with the provision that the prohibition should not extend to any coins imported under any license issued by the minister of munitions.

MALTESE ISLANDS.

MALTA.

RUSSIA.

No gold was coined in Russia in the year 1915.

The amount of silver coined at the mint in Petrograd in 1915 was as follows:

Denomination.	Pieces.	Value.	Value in United States money.
		<i>Rubles.</i>	
1 ruble (at 0.900).....	600	600	\$308.76
20 copecks (at 0.500).....	105,500,000	21,100,000	10,858,060.00
15 copecks (at 0.500).....	59,333,333	8,900,000	4,579,940.00
10 copecks (at 0.500).....	82,500,000	8,250,000	4,245,450.00
5 copecks (at 0.500).....	3,000,000	150,000	77,190.00
Total.....	250,333,933	38,400,600	19,760,948.76

Old coins were used for the above coinage.

The nominal value of pieces retired from circulation and remelted in 1915 was as follows: For coins of 0.900, 2,835,996.40 rubles (\$1,459,403.74); for coins of 0.500, 936,476.30 rubles (\$481,910.70).

The silver coins of full weight and fineness (0.900) and the subsidiary silver coins (0.500) have free circulating power up to the amount of 25 rubles and 3 rubles, respectively, in each payment.

Various articles of gold and silver remitted to the mint in 1915 to enter into the coinage represented the following quantities of fine metal:

Items.	Weight.	Value.	Value in United States money.
	<i>Kilograms.</i>	<i>Rubles.</i>	
Gold ware.....	30.990	40,021.10	\$20,594.86
Silverware.....	667.360	37,082.23	19,082.52

APPROXIMATE STOCK OF GOLD AND SILVER IN RUSSIA.

On January 1, 1916, the amounts of gold and silver belonging to the State bank were stated as follows:

Items.	Value.	Value in United States money.
	<i>Rubles.</i>	
Gold:		
In the vaults of the bank.....	86,165,874.89	\$44,340,959.92
In the mint.....	19,696,014.39	10,135,569.00
Bullion, coin, and bonds of the administration of mines.....	1,413,303,066.06	727,285,757.79
Gold (en route).....	94,749,915.28	48,758,306.40
Total.....	1,614,014,870.62	830,572,052.42
Foreign coins (at par).....	646,134,564.45	332,500,846.86
Grand total.....	2,660,149,435.07	1,368,912,899.28
Silver:		
Silver coins of full weight and fineness (0.900).....	10,083,627.12	5,189,034.51
Subsidiary silver coins (0.500).....	15,951,287.16	8,208,532.37
Total.....	26,035,914.28	13,397,566.88
Copper coins.....	259,712.71	133,648.16

On January 1, 1916, the gold, silver, and copper coins in public circulation were valued as follows:

Items.	Value.	Value in United States money.
	<i>Rubles.</i>	
Gold coins.....	442,900,000	\$227,916,340
Silver coins at 0.900.....	145,400,000	74,822,840
Silver coins at 0.500.....	161,800,000	83,226,228
Copper coins.....	21,900,000	11,269,740

On the same date there was, besides the above amounts in circulation, 39,800,000 rubles (\$20,481,080) of special stampings and documents of exchange of the treasury department circulating as money.

On January 1, 1916, the amount of credit notes in circulation were of rubles 5,616,800,000 (\$2,890,405,280); the portion not covered by gold amounted to 3,056,700,000 rubles (\$1,572,977,820), taking into account that, by the terms of the ukase of August 29, 1897, the first 600,000,000 rubles (\$308,760,000) were only guaranteed for one-half of that amount.

PREMIUM ON GOLD.

By virtue of the imperial decrees made by the council of ministers on September 14 and November 14, 1915, the minister of finances, in accord with the minister of commerce and industry and the comptroller of the Empire, has—with a view to aid the gold industry of the country, owing to the more and more increasing expenses of development, and also with a view to increase the treasury reserves—decided to accord a special premium for gold remitted to the State through the intermediary of Government refineries and the mint. That premium was fixed on November 25, 1915, until a new ordering at 30 per cent of the value of the fine gold.

LAWS AFFECTING THE CURRENCY.

Except for the above-mentioned 600,000,000 rubles, the notes issued have to be guaranteed by gold, ruble for ruble.

The laws of July 27, 1914, March 17 and August 22, 1915, give authority to the State bank to issue credit notes, in its indicated models, for 3,200,000,000 rubles (\$1,646,720,000). The law of July 27, 1914, suspended the exchange of credit notes against gold.

INDUSTRIAL CONSUMPTION.

The only information available to the finance ministry regarding the gold and silver employed in industry is of articles presented at the stamping office for verification in Russia. These amounts in 1915 were as follows:

Items.	Poods. ¹	Pounds.	Zolotniks.
Gold articles ²	485	33	68
Of which there were of Russian manufacture.....	480	33	59
Silver articles ³	6,892	12	71
Of which there were of Russian manufacture.....	6,875	11	3

¹ 1 pood is equal to 40 pounds, 1 pound to 96 zolotniks. (1 pood equals 16.380496 kilograms.)

² Also gold watchcases, 34,023, of which 1,674 were of Russian manufacture.

³ Also silver watchcases, 69,990, of which 20,892 were of Russian manufacture.

Imports of gold during the year 1915.

[Representing a value of 887,000 rubles (\$456,450).]

Classification and country from which imported.	Weight.	
	<i>Poods.</i>	<i>Pounds.</i>
Gold bullion:		
Germany.....	1	9
England.....	11	
China.....	13	16
Mongolia.....		
Total.....	25	30
Gold articles: Various countries.....	20	37
Total.....	46	27

EXPORTS.

There was exported 24 pounds of gold in bars, of which 15 were destined to China and 9 to Mongolia, for a value, in round figures, of 12,000 rubles (\$6,175).

PRODUCTION OF GOLD AND SILVER IN 1915.

The quantities of gold and silver remitted to the mint in 1915 by Government laboratories, by banks and by individuals, expressed in fine metal, were as follows:

Classification.	Weight.	Value.	Value in United States money.
	<i>Kilograms.</i>	<i>Rubles.</i>	
Gold.....	39,606.90	51,156,212.57	\$26,324,986.98
Silver.....	3,857.45	214,347.11	110,303.02

FINLAND.

There was no gold coinage in 1915.

The silver coined in the year 1915 amounted to 4,612,000 pieces, of the value of 2,322,000 Finnish marks (\$448,146). It is impossible to give the exact quantity and value of old coins having served in this coinage, as they used partly new metal and partly old coins. For the above coinage they used 9,766,830 grams of pure silver and 169,497 grams of old coins.

In 1915 there was deposited at the mint 586.50 grams in old gold articles of the value of 1,689.16 Finnish marks (\$326.01). Old silver articles would not serve for coinage.

On January 1, 1916, the quantity of gold and silver in coin and bullion belonging to the Bank of Finland was stated as follows:

Classification.	Weight.	Value.	Value in United States money.
	<i>Kilograms.</i>	<i>Finnish marks.</i>	
Gold coins (of Finland and of other countries).....		42,043,779.37	\$8,114,449.42
Silver coins.....		1,300,807.00	251,055.75
Gold bars.....	173.50	596,993.54	115,219.75
Silver bars.....	1,967.70	232,195.08	44,813.65
Amount of gold coins in private banks.....		746,315.00	144,038.79

The amount of silver coins in private banks can not be estimated because, in the bank statistics, the credit notes and the silver coins are stated in a round amount.

On January 1, 1916, the amount of credit notes of the Bank of Finland in circulation was 231,614,134 Finnish marks (\$44,701,527.86). Of the above amount, 42,640,772.91 Finnish marks (\$8,229,669.17) were guaranteed by gold, and the remainder, 88,973,361.09 Finnish marks (\$35,471,858.69) were secured by other guarantees which, under the terms of bank statutes, are assigned to gold for the coverture of notes.

No premium exists upon gold.

On September 3, 1915, a decree was rendered by the Imperial Senate of Finland, giving authorization to the Bank of Finland to issue credit notes of the nominal value of 1 gold mark (Finnish).

The reports of the mint are published with the reports of the administration of industry and statistics of Finlandish industry.

Imports of gold and silver during the year 1915.

Classification.	Weight.	Value.	Value in United States money.
	<i>Grams.</i>	<i>Finnish marks.</i>	
Gold:			
Gold bars.....	3,860	11,812	\$2,279.71
Gold articles.....	125,620	73,392	14,164.65
Silver:			
Silver bars.....	18,870,000	12,453,100	473,448.30
Silver articles.....	365,050	72,829	14,056.00

¹ The greater part of this amount was used in coinage.

There was no exportation of either gold or silver in 1915.

The quantity of pure metal employed in industry during the year 1915 was as follows:

Classification.	Weight.	Value.	Value in United States money.
	<i>Kilograms.</i>	<i>Finnish marks.</i>	
Gold.....	193.00	694,800	\$134,096.40
Silver.....	1,600.00	224,000	43,232.00

REFINERY PRODUCTION.

In 1915 there was remitted to the mint by the Bank of Finland 16,000 kilograms of fine silver of the value of 2,080,000 Finnish marks (\$401,440). There were no gold entries.

SPAIN.

United States gold coin was imported during the calendar year 1916 to the amount of 33,964,272 pesetas, equivalent to \$6,555,104 in United States money.

Approximate stock of gold and silver coin in the country on Dec. 31, 1916.

Classification.	In bank's coffers. ¹	United States equivalent.	In circulation.	United States equivalent.
	<i>Pesetas.</i>		<i>Pesetas.</i>	
Gold coin.....	1,250,895,501.15	\$241,422,831.72		
Silver coin.....	741,041,508.32	143,021,011.11	500,000,000	\$96,500,000
Total.....	1,991,937,009.47	384,443,842.83	500,000,000	96,500,000

¹ The existing cash which appears in this column is that which they have in the National Bank of Spain; that in the other banks is not known, but in reality is very small, because, with the system of having open accounts current in the Bank of Spain, which has branches in all the capitals of the Provinces and principal places of the Kingdom, the metallic stock in their coffers is nothing more than for the necessities of the moment.

NOTE.—As the Bank of Spain performs the service of treasury of the State, the metallic stock of the treasury is found in said establishment.

Notes outstanding on Dec. 31, 1916.

Designation.	Notes outstanding.	United States equivalent.	Gold holdings. ¹	United States equivalent.	Legal-tender silver holdings. ¹	United States equivalent.

REPORT BY LEGATION OF THE UNITED STATES OF AMERICA, STOCKHOLM, MAY 14, 1917.

The Government has discontinued coinage of one, two, and five öre pieces of copper. In their stead iron coins will be used. The following table indicates the weight of the new coins:

144 five-öre pieces are made from 1 kilogram iron.
 288 two-öre pieces are made from 1 kilogram iron.
 576 one-öre pieces are made from 1 kilogram iron.

MANUFACTURE OF MEDALS DURING THE CALENDAR YEAR 1916.

[From report of the director of the royal mint, Stockholm, 1916.]

Classification and amounts of metals employed in the manufacture of medals during the calendar year 1916 is as follows:

Metals.	Weight in kilograms.	Equivalent in ounces.
	22.3529	718.6681
	273.2643	8,785.7205
Fine gold.....	178.3450	5,733.9701
Fine silver.....	0.1490	4.7905
Medal bronze.....	3.3049	106.2558
Aluminum.....		
Copper.....

Amount not covered by metallic reserve.....	233,997,800	62,711,410

SWEDEN'S GOLD POLICY.

[Extract from an article published in The Economist, London, Mar. 4, 1916.]

* * * * *

The Bank of Sweden, according to the rules for its management, laid down in the codified law of Sweden, was bound to buy bullion offered to it for sale at the coinage value, which is 2,480 kroner per kilogram, less $\frac{1}{4}$ per cent for coining. That is to say, if anybody came to the Bank of Sweden and offered 1 kilogram of bullion, the bank was obliged to purchase this bullion for 2,480 kroner, less $\frac{1}{4}$ per cent, or 2,473.80 kroner net, and that at a time when the same quantity could be bought in the open market at the price of 2,200 kroner.

"It is from this duty that the bank has been freed. Of any prohibition of importation of gold there has been no question.

"The soundness of this new gold policy is quite obvious also from another point of view. It will counteract a superabundance of gold with its accompanying raising of prices for commodities."

* * * * *

COIN OF SWEDEN, NORWAY, AND DENMARK.

[From report of the director of the royal mint, Stockholm, 1916.]

Possession of conventional gold coin on Dec. 30, 1916.

Location.	Kroner.	United States equivalent.
In Swedish Royal Bank.....	73,234,060	\$19,626,728
In Swedish Joint-Stock Bank Association.....	561,765	150,553
Total.....	73,795,825	19,777,281
In Bank of Norway.....	41,906,460	11,230,931
In Danish National Bank.....	26,494,480	7,100,521
Total.....	68,400,940	18,331,452

The total amount of conventional gold coin held in the national banks of the three Scandinavian countries and in Sweden's Bank Association on December 30, 1916, was 142,196,765 kroner (\$38,108,733).

Amount of silver divisional coins on Dec. 30, 1916.

Location.	Kroner.	United States equivalent.
In Swedish Royal Bank.....	1,377,791.30	\$369,248.07
In the mint, bureau of assays, and cash exchange office (Sweden).....	278,100.00	74,530.80
Total.....	1,655,891.30	443,778.87

The amount of Danish and Norwegian silver divisional coins in the coffers of the Swedish Royal Bank on December 30, 1916, amounted to 954,222.25 kroner (\$255,731.56).

The amount of silver divisional coins in circulation in Sweden on December 30, 1916, was 40,535,318.85 kroner (\$10,863,465.45).

SWEDEN'S ROYAL BANK IN 1916.

[From Royal Bank's yearbook, compiled in the bank's statistical division in Stockholm, 1917.]

The metallic stock in the Royal Bank of Sweden in the year 1916 showed an average amount of 165,500,000 kroner (equivalent to \$44,354,000), against 113,300,000 kroner (equivalent to \$30,364,400), in 1915; an increase of 52,300,000 kroner (equivalent to \$14,016,400).

A comparison between the designations of gold stocks at the expiration of the last two years is shown in the following statement:

Designation.	Dec. 31, 1915.		Dec. 30, 1916.	
	Value.	United States equivalent.	Value.	United States equivalent.
Scandinavian gold coin.....	<i>Kroner.</i> 55,438,580.00	\$14,857,539.44	<i>Kroner.</i> 73,234,060.00	\$19,626,728.08
Other gold.....	69,132,954.63	18,527,631.84	110,285,585.42	29,556,536.89
Total.....	124,571,534.63	33,385,171.28	183,519,645.42	49,183,264.97

Therefore, the Royal Bank's stock of Scandinavian gold coin had an increase in 1916 of 17,795,480 kroner (equivalent to \$4,769,189), and in other gold reserve, an increase of 41,152,631 kroner (equivalent to \$11,028,905).

The outflow of gold during the period 1912-1916 fluctuated variously, as will be seen from the following compilation:

Year.	Value.	United States equivalent.
1912.....	<i>Kroner.</i> 1,039,290	\$278,530
1913.....	904,300	242,352
1914.....	2,877,800	771,250
1915.....	661,500	177,282
1916.....	2,800,000	750,400

Increases of gold stock, however, went from 124,600,000 kroner (equivalent to \$33,385,000) to 142,300,000 kroner (equivalent to \$38,136,400) on January 31, and to 160,300,000 kroner (equivalent to \$42,960,400) on February 5, 1916.

Further comparison of holdings of other than Scandinavian gold coin at the termination of the last two years, with reference to their special characteristics, may be made from the following table:

Classification.	1915		1916	
	Value.	United States equivalent.	Value.	United States equivalent.
Foreign gold coin.....	<i>Kroner.</i> 50,042,474.08	\$13,411,383.05	<i>Kroner.</i> 91,732,228.12	\$24,584,237.14
Gold ingots.....	19,063,985.75	5,109,148.18	18,526,897.30	4,965,208.48
Light-weight foreign gold coin, also carolines and old ducats ¹	20,494.80	7,100.61	26,460.00	7,091.28
Total.....	69,132,954.63	18,527,631.84	110,285,585.42	29,556,536.90

¹ Carolines or new ducats are equal to 7.20 kroner (\$1.93), and old ducats are equal to 8.426 kroner (\$2.26).

From this comparison it is evident that the entire increase was upon foreign gold coins, as the reserve stock in ingots and other gold coin had a decrease against the previous year's record.

Further, holdings of the Royal Bank in Scandinavian gold coin had a normal customary outflow of about 900,000 kroner (equivalent to \$241,200) for industrial purposes per year according to all reports.

No gold was coined during the calendar year 1915.

Coinage of silver during the calendar year 1915.

Denomination.	Pieces.	Value.	United States equivalent.
		<i>Kroner.</i>

SWITZERLAND.

MINT COINAGE IN 1916.

[From report of the Federal department of finances and customs upon the administration of 1916.]

GOLD COINAGE FOR ACCOUNT OF THE SWISS NATIONAL BANK.

Denomination.	Pieces.	Value.	United States equivalent.
20 francs.....	300,000	<i>Francs.</i> 6,000,000	\$1,158,000

SILVER COINAGE.

		<i>Francs.</i>	
5 francs (recoinage).....	13,388	66,940	\$12,919
2 francs.....	250,000	500,000	96,500
1 franc.....	1,000,000	1,000,000	193,000
50 centimes ¹	800,000	400,000	77,200
Nickel: 10 centimes ²	1,000,000	100,000	19,300

¹ The 800,000 50-centime pieces are a special compensation coinage for a similar amount of pieces retired from circulation exclusively, and for that reason are not indicated in the coinage tables.

² Carried over from 1915.

The designated silver coinage was made from bar silver purchased through the intermediary of the national bank, at 101.05 francs (\$19.50265) per kilogram. For the 10-centime nickel pieces the necessary metal was already on hand from the previous year.

The last recoinage of our own silver 5-franc pieces with the design of "Helvetia" (seated) was made by us in 1912. We intend to recoin, as far as possible, the remainder of those pieces withdrawn by ourselves and held (but not those of France), for the time to be fixed therefor.

Of fractional silver coins which were retired from circulation because they were worn beyond the limit of tolerance we have sent to the public treasury of France 550,000 francs (\$106,150), for which amount we have received the countervalue in fractional silver coins of our own coinage. In return there was remitted to us for exchange worn Swiss fractional silver coins to the amount of 460,000 francs (\$88,780). Complying with a demand that we made, France remitted to us Swiss 5-franc pieces with the old design of "Helvetia" (seated) for the nominal value of 42,235 francs (\$8,151), and we sent them French 5-franc pieces in exchange.

Reserve funds.

Statement.	Value.	United States equivalent.
After the conclusion of the general assembly of Apr. 15, 1916, the reserve funds were.....	<i>Francs.</i> 2,440,858.48	\$471,085.69
Conformably to art. 27, sec. 1, of the bank laws, which decided that 10 per cent of the average gain or loss (outside of the usual net gain, in no case, however, of more than 500,000 francs in one year), should be reckoned for..	500,000.00	96,500.00
From the above, the total reserve fund for 1916 is shown to be as follows.....	2,940,858.48	567,585.69

SILVER RECOINAGE IN 1915.

[From the report of the Federal department of finances and customs upon the administration of the year 1915.]

There was delivered to the Federal mint in the year 1915 silver coins to be recoined of the nominal value of 45,380 francs (\$8,758).

PRECIOUS METALS EMPLOYED IN INDUSTRY DURING THE CALENDAR YEAR 1915.

The intrinsic value of the precious metals employed in the manufacture of gold, silver, and platinum works may be valued, approximately, as follows:

Classification.	Value.	United States equivalent.
Gold articles.....	<i>Francs.</i> 20,000,000	\$3,860,000
Silver articles.....	5,500,000	1,061,500
Platinum articles.....	200,000	38,600

The director of the Federal bureau of gold and silver operations, consulted as an expert, estimated the weight of fine gold and fine silver used in Swiss industry during the calendar year 1915 as follows:

Metal.	Kilograms (fine).	Equivalent in fine ounces.	Value in United States money.
Gold.....	6,000	192,906	\$3,987,721
Silver.....	57,000	1,832,607	1,926,896

¹ At the average price of silver during the calendar year 1915, viz: \$0.50578 per fine ounce.

UNITED STATES GOLD COIN IMPORTED DURING 1915.

During the calendar year 1915 United States gold coin to the value of 850 francs (\$164) was imported. There was none melted at the mint. Switzerland, as a rule, abstains from melting coins of other countries; their coinages of Federal coins are made from new gold and silver bullion.

STOCK OF GOLD AND SILVER IN 1915.

The available data for reply to this question is lacking, we can indicate only the amount in coffers of the Swiss National Bank, as follows:

Classification.	Value.	United States equivalent.
Gold coin.....	<i>Francs.</i> 214, 798, 206.08	\$41, 456, 053. 77
Gold bullion.....	35, 334, 197. 93	6, 819, 500. 20
Silver coin.....	51, 237, 635. 00	9, 888, 863. 56
Total.....	301, 370, 039. 01	58, 164, 417. 53

ASIA.

ARABIA (ADEN).

PREMIUM ON GOLD DURING THE CALENDAR YEAR 1915.

Highest premium, 16½ rupees; lowest premium, 15 rupees; average premium, 15½ rupees.

Actual currency of the country is Indian rupees (15 rupees are equivalent to 1 pound sterling).

The Maria Theresa (silver) dollar rose considerably in price during 1915. At the beginning of 1915 the price was about 112 rupees to 100 Maria Theresa dollars, which later rose to 125 rupees and then dropped to 118 rupees. There followed a sharp advance until it reached 170 rupees and then a drop to 150 rupees, since when it has held quite firm at between 150 and 155 rupees. This change was caused by the sharp advance in silver. This market has been at all times ahead of the silver prices in London and consequently there has been sharp speculation. Large quantities have been bought for London and as there is no new coinage of dollars it is probable that the rupee will make great headway toward replacing the Maria Theresa dollar. Combined with the fact that the Egyptian Government has authorized the circulation of the rupee and that the Indian Government has made it the currency of the Persian Gulf ports, it is quite certain that the Maria Theresa dollar will lose considerable of its importance.

United States equivalent.....	\$266,548,940	\$77,343,124	\$46,656,692

NOTE.—The amount of Government notes outstanding at the end of the calendar year 1916, not covered by gold and silver, was Rs. 439,423,906 (\$142,549,115).

THE ACTUAL CURRENCY OF THE COUNTRY.

The metallic currency in use is the silver rupee. A considerable quantity of gold also passed into circulation in some parts of the country in the form of sovereigns. These normally circulated at their legal-tender rate of Rs. 15/— equal to 1 sovereign. About the beginning of August, 1914, however, owing to special war conditions, issues of gold from Government treasuries and currency offices were restricted and shortly afterwards a premium appeared on gold, which has continued with fluctuations up to the present.

PREMIUM ON GOLD.

The highest premium for 1916 was Rs. 2/6/— per sovereign, the lowest premium 5 annas per sovereign, and the average premium about 15 annas 10 pies per sovereign.

LAWS PASSED DURING THE YEAR 1916.

The Indian paper-currency (temporary amendment) act, 1916. (Nov. 11, 1916.)
An ordinance to amend temporarily the Indian paper-currency (temporary amendment) act, 1916. (Dec. 13, 1916.)

A bill further to amend temporarily the Indian paper-currency act of 1910. (Repeal of Ordinance I of 1916.)

CURRENCY LEGISLATION IN 1916.

The fundamental coinage law, which became effective October 1, 1897 published in Report of the Director of the Mint for 1897, p. 353), has been amended by elimination of the metric equivalent of weights, and by reducing the weights of the nickel and copper coins, viz:

The following revision is made to the coinage law, by law No. 8 of 1916:

In article 6 (16 grams 6665), (8 grams 3333), (4 grams 1665), (8 grams 125), (4 grams 05), and (2 grams 25), shall be suppressed, and items 7 to 9 shall be revised as follows:

Nickel coin, 1.14 momme.

1 sen copper coin, 1 momme.

5 rin copper coin, 0.56 momme.

NOTE.—1 momme equals 3.75 grammes.

In article 10 (0 gram 03240), (3 grams 11250), (0 gram 02269), (2 grams 3250), (0 gram 01620), (1 gram 53750), (0 gram 0450), (2 grams 40), (0 gram 0390), (0 gram 0810), (4 grams 05), (2 grams 10), shall be suppressed.

In article 11 (16 grams 5750), (8 grams 2875), (4 grams 1438), shall be suppressed.

This law shall be effective from April 1, 1916.

Nickel and copper coins hitherto issued shall pass current as before.

CHINA.

AMOY DISTRICT.

United States gold coin imported during the calendar year 1916 amounted to \$2,691 in 10-dollar and 5-dollar pieces. None was melted.

There is no mint.

ACTUAL CURRENCY OF THE DISTRICT.

The following silver coins are in circulation at this port: Japanese yen (coined for Formosa), Hongkong dollars, Mexican dollars, Indo-China piasters, Chinese dollars (yuan), all considered to be mutually equivalent in value.

One of the features of this port is that regarding local currency. The unit of this currency is the so-called "Spanish dollar," which, though actually in use in the sixties, had totally disappeared from the market by the end of the seventies. Since then, however, it has remained as a book unit by the local agency of the Hongkong and Shanghai Bank and made to rule practically all commercial and banking transactions of the port. The rate of this unit with regard to the silver currency actually handled here, as described above, is fixed from day to day by the aforesaid bank. It varies generally from about 2 per cent premium to par, but may even go below par. It in times when silver coins are scarce, as at present, when it is 4 per cent below par. The sole criterion has been as much as 8 per cent below par during the past 6 months. The sole criterion for this fluctuation is the bank's want or superfluity of silver dollars, which is practically synonymous with the port's demand or supply of coined currency. Some other banks established in more recent years—the Bank of Taiwan (Japanese) and the Bank of China—have local silver currency, yen or dollars, as their unit, but this has not affected the paramount position of the Spanish dollar as the basis of trade and foreign trade transactions at Amoy. Though in theory the Spanish dollar is represented by 72 candareens, Canton weight of current dollars, or silver of 0.900 fineness, in practice sycee is not obtainable, and the bank reserves the right to refuse the acceptance of dollars by weight, taking them by count only, with the interposition of its daily rate to arrive at Spanish dollars. Needless to say, this rate also varies for buying and selling.

NOTE.—These statistics are only for the port of Hankow and apply only to interport trade. No figures are given for foreign countries.

HARBIN DISTRICT.

All the information given herein has been obtained from the collector of the Chinese maritime customs, the directors of the Bank of China and from the Russo-Asiatic Bank.

There is no mint in Harbin, but there is a mint at Mukden which was formerly at Kirin. It coins only silver and issues a yearly report. The Harbin bank had no copy.

Gold and silver used in the industrial arts: There is no information upon which to base an opinion as to how much gold is used in the industries in this district. The district uses very little gold or silver metal in manufactures and the bulk of these metals used comes from Russia in a manufactured state.

GOLD, SILVER, AND BANK NOTES IN THE COUNTRY.

The manager of the Russo-Asiatic Bank feels that it is very difficult to estimate the amount of legal tender circulating in North Manchuria. But taking into consideration that 37,000,000 poods of wheat and beans (1 pood is equal to 40 pounds), valued, approximately, at rubles 1.50 (in United States \$0.7719), change hands during the three months of October, November, and December, there must be at least 50,000,000 rubles (in United States \$25,730,000) in circulation during that season. In 1916 the Russo-Asiatic Bank here received shipments of bank notes from Vladivostok to the amount of 26,400,000 rubles (in United States \$13,585,440), and returned to Vladivostok 18,000,000 rubles (in United States \$9,262,800). The remainder of 8,400,000 (\$4,322,640), has gradually been returned since the first of the year. He says that there is no gold at all in circulation here, and very much doubts

if any has been hidden away. Most probably it has been exported to China and Japan where there is a better rate received for gold coins than for Russian bank notes. The banks in the Harbin district claim to have no gold in reserve, as the Russian Government ordered the shipment to Russia of all the gold that could be secured more than two years ago.

In 1916 the Bank of China at Harbin issued bank notes to the value of small silver coin \$1,600,000. These notes were sent to south Manchuria for circulation. It also issued notes for \$200,000 Mexican. Both issues were covered by silver currency in the bank.

The local bank of China states that there is in circulation in the Harbin district about 30,000,000 rubles (in United States \$15,438,000), in Russian currency, both coin and notes. There are also notes in circulation to the value of 50,000,000 Kirin diaos and 20,000,000 Heilungchiang diaos. There were small silver coins in circulation to the value of (s. s.) \$1,600,000, and \$500,000 Mexican.

NOTE.—Each year the Bank of China receives about 100,000 taels weight of gold sent from north Manchuria to the bank and from there to Shanghai. One tael weight of gold (1 ounce), is worth from 30 to 40 taels, according to fluctuation in the price of silver.

The last law promulgated in reference to the currency was in November, 1915, when the late President, Yuan-Shi-Kai, ordered all banks to pay cash on demand against bank notes.

CURRENCY OF THE DISTRICT.

The actual currency of the district is rubles. There is a premium on gold but no gold circulates in the district. Exchange rate varied with different banks.

¹ Mostly coin.² Mostly bullion.*Actual currency of the colony.*

The actual currency of the colony is silver.

[By United States consul general, Dec. 20, 1916.]

In the south China trade field, embracing Hongkong, Canton, and subsidiary ports, the currency consists of: (1) The Hongkong standard silver dollar otherwise known as the "British dollar"; Hongkong paper currency which is a promise from certain authorized banks to pay such standard silver dollar on demand; Hongkong subsidiary coins, including particularly 20-cent pieces, 10-cent pieces, and copper coins. (2) The Canton silver dollar which is a comparatively rare coin; the Canton paper dollar which is a promise from the Chinese Government, usually the Provisional Government, to pay such silver dollar on demand, but in practice redeemable in small silver coin; and Chinese subsidiary coins, notably Chinese 20-cent pieces, 10-cent pieces, copper one-cent pieces, and brass cash.

It is impossible to give any fixed ratio of value between any of these coins both between Hongkong and Canton currency and between the various coins of the same Government or between them and gold. In Hongkong until recently subsidiary coins circulated at a discount compared with the standard silver dollar, but recently the continuous retirement of silver coins by the Hongkong Government has brought the subsidiary coins to substantially par with the corresponding standard dollar. At

times, however, in the past two years the relation of the silver dollar to the paper dollar has varied in the most remarkable manner. For months during the past year, for example, the paper dollar, which ordinarily might be at a discount compared with the silver dollar, was, in fact, at a high premium over the standard silver dollar—that is, the bank's promise to pay was worth more than the silver dollar itself, this premium rising as high as 12 per cent.

In Canton the relation between the paper dollar and the silver dollar constantly varies, the paper dollar usually circulating at a discount compared with the silver dollar. As a matter of fact, there are very few actual silver dollars in circulation. The great mass of the money of the people are the Chinese subsidiary coins, notably 20-cent pieces, 10-cent pieces, copper-cent pieces, and brass cash. These subsidiary coins circulate usually at a premium over their corresponding value in paper currency. At present the 20-cent pieces and 10-cent pieces circulate at about 20 per cent and 25 per cent over the Canton paper dollar. All this Canton currency varies in value in its relation to Hongkong currency. For example, according to the Hongkong morning papers, the Canton 20-cent pieces circulate at 3.98 per cent discount and the Canton 10-cent pieces circulate at 5 per cent discount compared with the Hongkong standard dollar. In the midst of all this variation the relation of the Canton copper currency to the 10-cent pieces and 20-cent pieces as well as to the paper dollar and standard silver dollar constantly varies. The relation of the brass copper cash to the copper currency as well as to the subsidiary silver currency is also constantly changing. In ordinary dealings in life in Canton workmen are usually paid on the basis of the brass cash or copper currency and it is only in the larger transactions that the subsidiary coins come into play and still larger transaction requiring the use of the Canton dollar. In the ordinary purchase of goods for export in Chinese territory it is usually specified that payment shall be made in Chinese subsidiary silver currency. All these currencies vary in their relation to gold.

While all this variation between the values of the various Chinese coins at Canton among themselves and the various Hongkong coins in Hongkong and in their relation with each other and with gold seems to be of the most illogical and unreasonable sort it is in fact in entire obedience to a very broad principle which runs through Chinese business life both in south China and north China, namely, that all money in China is not a coined representative of value supported by government authority, but is merely a commodity and all trade is barter—the exchange of so much merchandise for so much silver or so much money of such and such a sort. In silver currency the value of silver is the prime consideration and a silver coin is merely a conveniently measured amount of silver; similarly with copper and brass. There are other considerations, however, and a strong demand for paper currency carries that currency to a premium even though it is a promise to pay the silver over which it is a premium. The relation of brass cash to copper and to silver depends upon the comparative demand for cash and the comparative supply thereof in a province. This operation of the law of supply and demand operates in all monetary affairs and is more or less inevitable when there is no strong government or other authority to regulate the supply of money and to prevent abuses.

In the purchase of merchandise for export in this south China field Hongkong for most lines of export is taken as the collecting point. While the production of some lines of export goods in Hongkong is very large, as, for example, certain lines of tinned Chinese foods, etc., the great mass of Chinese merchandise is produced in territory adjacent to Hongkong—in Macao (Portuguese territory) Amoy, Swatow, and in the Pearl River Delta—not so much in Canton proper as various districts in Kwangtung and Kwangsi Provinces. The usual method of buying these goods is through brokers who buy purchases direct from small producers. When shipment is made from Hongkong the brokers go through the country and buy up their goods and have them shipped to Hongkong where they are packed and prepared for export. If the goods are to be shipped from Canton, they are purchased by brokers in a similar manner and shipped to Canton where they are packed and prepared for export. Practically all of the lines of goods mentioned in the inquiry of the Treasury Department are freely sold and offered for sale both in Hongkong and Canton. The commissionaires in either city usually place their orders with brokers who gather the merchandise together at either of the centers mentioned. For example, a firm in Hongkong or Canton receiving an order from the United States for a lot of earthenware will place the order with a middleman or broker who may buy the goods of the potteries in Kwangsi Province or of those near Canton or may buy the goods from stocks held in Hongkong or Canton. Of course, the market for some merchandise in Hongkong is larger than it is in Canton and vice versa, but taking it on a whole the immensely larger portion of these goods go out of Hongkong. Export firms as a rule have their principal houses in Hongkong with branch houses in Canton. Silks and matting are shipped in larger quantities

from Canton. Tinned fruits, tea, vegetable oils, soy beans, paint brushes, bottles, prepared meats and nearly all such lines of goods are handled in greater quantities in Hongkong than Canton, some of them in fact not being shipped from Canton at the present time on account of pure-food regulations. However, it should be noted that there is a free and open market for all these goods in both ports.

It is impossible to fix any definite lines covering the shipment of these goods from any one port and it is impossible to establish any fixed or generally relative value of the several currencies in which purchases are made. Prices of all goods in Hongkong and Canton vary from day to day as they do anywhere else and in the terms of currencies which have no fixed relations and which vary from day to day and indeed from hour to hour.

HONGKONG SUBSIDIARY COINAGE.

[From United States consul at Hongkong, China, June 1, 1917.]

Apparently the relation of Hongkong's subsidiary coinage and the corresponding standard silver currency and its paper representative is permanently at par after years of effort on the part of the Government to bring it about. For several months now, including months of more or less uncertainty in monetary matters in South China and the colony itself, there has been substantially no change from par. While money changers are disposed to make a slight charge for changing paper currency or standard dollars into subsidiary coins and vice versa the actual relation of the several currencies seems properly fixed. According to the report of the colonial treasurer for 1916, subsidiary coins in stock on the 31st December included: 50 cents, \$9,642; 20 cents, \$123,415.20; 5 cents, \$142,066.40; copper, \$21,297.96, or a total of \$296,421.56. Against this, however, there was an advance by the bank of \$14,137.90 in 10-cent pieces, which makes the balance of the stock on the above date \$282,283.66. During 1916 coins were demonetized to the face value of \$5,028,000, all in 10-cent pieces. The balance of coins in circulation is now \$21,264,370. The discount on subsidiary coin compared with the silver dollar entirely disappeared in the latter half of 1916, and parity has existed now for almost a year. The maximum discount in each case earlier in 1916 was as follows: 50-cent pieces, 7 per cent; 20-cent pieces, 10 per cent; 10-cent pieces, 10 per cent; 5-cent pieces, 9 per cent; copper, par.

There is also no disposition to interfere with the relation between silver dollars and bank notes which represent them, although the conditions which brought the paper currency to a premium over the silver it represents may be brought about at any time.

PECHILI DISTRICT.

NEW SUBSIDIARY COINS IN CHINA.

[By C. E. Gause, American consul in charge, Tientsin, China, Sept. 14, 1916.]

By a notification dated August 3, 1916, the ministry of finance of China announces the minting of three new subsidiary coins, the half-yuan piece, the 20-cent piece, and the 10-cent piece, the weight, fineness, and legal allowance for variations being prescribed under the national currency law.

Under this law the unit of the national coin is called the yuan, containing 6 mace, 4 candareens, and 8 li (kuping weight), or 23.98895048 grams of pure silver.

The yuan, or yuan dollar as it is commonly called, was issued some time ago, but the subsidiary coins have only recently been minted.

Throughout China subsidiary silver coins known as 5, 10, and 20 cent pieces and nominally bearing a ratio of one-twentieth, one-tenth, and one-fifth of the dollar, but stamped with a tael value, are in circulation. The ratio that these coins bear to the dollar varies to an extraordinary degree. Generally, all subsidiary silver coins are accepted only at discount. Popular fancy has played its part in connection with subsidiary silver coinage also.

Under the currency law the new subsidiary silver coins are required to be exchanged for another on a decimal basis, and no premium or discount is allowed in exchange. A penalty is provided by the currency law for violation of this provision.

In reply to an inquiry through official channels from this consulate general, the head mint at Tientsin, which coined this subsidiary currency, gives the following information:

"According to Section V of the national currency law the complete weight of the 50-cent piece is 3 mace, 6 candareens, while the relative weights of silver and copper are, silver 7, copper 3. The complete weight of the 20-cent piece is 1 mace, 4.4 candareens, the relative weight of silver and copper, silver 7, copper 3. The complete weight of the 10-cent piece is 7.2 candareens; the relative weights of silver and copper, silver 7, copper 3.

"According to section 8 of the law, the weight of any individual coin may not differ more than 0.003 from the legally fixed weight, and the weight of any 1,000 coins must not differ more than 0.0003 from the weight fixed by law for 1,000 coins.

"According to Section IX of the law the fineness also must [not(?)] differ more than 0.003 from the legally fixed fineness."

"This mint has followed the regulations as above noted in the issuance of these new coins."

The new subsidiary coins are being issued through the Bank of China at Tientsin, but apparently there is no considerable quantity on the market. There is much doubt whether this subsidiary coinage will actually remain and pass on a decimal basis, without discount or premium, especially as it comes into constant use daily along with the large quantities of subsidiary silver coins now in circulation, which are practically all subject to discount.

SHANGHAI DISTRICT.

NOTE.—The issue of foreign bank notes is, of course, restricted by their regulations, while that of the Chinese banks are not always restricted by considerations of adequate reserves for redemption.

PREMIUM ON GOLD.

The only explanation that can be given in answer to this question is the one given for previous years, viz: The answer of the local branch of the International Banking Corporation on the question:

"It is difficult to give you an answer on the point you raise in view of the fact that as silver is the currency of China, gold is quoted merely as a commodity and has no direct premium or discount as compared with the silver currency in China. The only comparative basis on which we can work is the gold price of silver in America."

On this basis the highest rate of exchange during 1916 was United States \$0.4172, equaling \$1 Mexican, the average rate for the year being United States \$0.49, equal to \$1 Mexican.

SHANTUNG PROVINCE.

CHEFOO.

Estimated stock of silver bullion in the district on Dec. 30, 1916.

Classification.	In circulation.
Silver bullion.....	Taels. 1 550,000

¹ Estimated daily average.

ACTUAL CURRENCY OF THE PROVINCE.

"The coins at present in use in this Province are Mexican and Chinese dollars, 20 and 10 cent pieces, copper and brass cash. The Chinese dollars are mostly the coinage of the Tientsin mint, others being at a discount. The 20 and 10 cent pieces are in the main from the Mukden mint. The former exchange at the rate of about 6 for a dollar, with the latter worth half as much, although they are much fewer in number. Copper "cents" or "10-cash" pieces fluctuate from 128 to 145 per dollar. The exchange quotations of all coins vary from day to day. The silver coins are not used to any extent in the interior, where little commerce is carried on with the other ports. In the interior coppers and brass cash are still practically the only coins used, while silver in the form of "shoes" is used for making large payments."

The Mexican silver dollar is most generally used at this time. The new Chinese dollar—"yuan"—although in circulation, is seldom seen. The new 20-cent and 10-cent silver pieces and 10 and 5 cash copper pieces have recently been authorized for circulation in Shantung Province, but at this writing are not in general use.

GOVERNMENT AND BANK NOTES.

The French Colonial Government of Madagascar and dependencies has not the power to issue bank notes, but by a decision of September 12, 1916, fiduciary money—being postage stamps pasted to pieces of cardboard—was put in circulation in the colony to the amount of \$135,004.72, this money being redeemable in all of the Government bureaus. Practically all of the fiduciary money was outstanding at the end of 1916, and is said to have been fully covered for redemption.

ACTUAL CURRENCY OF THE COLONY.

The currency of France is used in Madagascar.

LAWS PASSED DURING THE YEAR 1916 AFFECTING THE CURRENCY.

The issuance of fiduciary paper money was authorized by the decree of September 17, 1914, in view of the war situation, but the issuance of such money was countermanded by the decree of September 21, 1916, making notes of the Bank of France legal tender in Madagascar.

PRECIOUS METALS EMPLOYED IN INDUSTRY.

[From report of the minister of finance, Paris, 1914-15.]

The gold employed for the manufacture of jewelry resulted from coins, principally 20-franc pieces imported into Morocco; it is impossible to value it with any degree of accuracy. The quantity of silver coin employed as primary material by the industry is equally impossible of accurate determination, but it is certain that a notable quantity of Hassani coin is applied to that usage. The numerous artisans existing in Morocco find it more convenient to utilize the coins which they have on hand rather than to buy ingots. However, the industry commenced, some years ago, to procure for its use ingots and grains of silver.

NOTE.—The bank of the State of Morocco remitted to the mint at Paris, for remelting, pieces of the Moulay-Hassan system representing the following weight of fine silver:

Year.	Kilograms (fine).	Equivalent in fine ounces.
In 1912.....	12,821.791044	412,233.4038
In 1913.....	5,737.952495	184,480.9107
In 1914.....	2,629.124062	84,528.9677
Total.....	21,188.867601	681,243.2822

VALUATION OF THE MONETARY STOCK.

[From report of the minister of finance, Paris, 1914-15.]

The stock of gold, which was composed of Moroccoan "bondouki" (an old Moroccoan coin which had the value of two strong pesos of Spain—2 rials or 10 francs), and old Spanish coins, has almost entirely disappeared. The stock of European coins consists especially of 20-franc pieces of the Latin Union, some English sovereigns, and some rare Spanish doubloons. In general, the circulation of gold coins had considerably diminished in 1905, by reason of the rise in the course of exchange, which had drained the gold to foreign countries to pay the excess of the importations over exportations. That which remains is almost entirely in the hands of notable Mussulmen, and is considered as funds of the reserve; it is impossible to value the amount. There are no gold bars in the country.

The deliveries which have been made to the "Makhzen" in Hassani silver coins, since the institution of the "Hassani" coins, represents 166,000,000 Hassani pesetas (\$32,038,000). The amount remaining in circulation is unknown. The French silver coins and the Spanish silver coins were at a premium.

The reserve of the Bank of Morocco in Hassani coin on December 31, 1913, and December 31, 1914, amounted to the following figures:

Reserve of the bank of Morocco.

MONEY CIRCULATING IN MOROCCO.

[From the Statesman's Year Book, London, 1915.]

Spanish dollars and pesetas, as well as Moorish coins, minted for the Government in France, Germany, and England, are current. The silver coinage comprises dollars, half dollars, and quarter dollars; dirhems and half dirhems (10 dirhems are equal to 1 dollar); but the values fluctuate, and the market values are sometimes only one-third of those adopted by the Government for customhouse purposes.

At Tangier, European goods are paid for in Spanish coin or French coin. French coin is much used at Casablanca (Dar-el-Vaida); in other parts of Morocco Moorish coin is now almost exclusively used. The use of French money is extending.

On July 27, 1914, the new bronze Hassani coins were issued. Coins of 2, 5, and 10 mouzounas have been struck; they are all of the same design, differing only in size and the figure indicating their value.

TUNIS.

PREMIUM ON GOLD.

No official premium. Actual premium about 20 per cent, but transactions at a premium are illegal and subject to penalty of law.

NOTE.—All values are given in francs, as the rate of dollar exchange is constantly changing. Drafts on the United States are sold at a rate furnished by the banks in Paris plus a charge of 3 centimes per dollar to cover charges.

Silver bullion.....	307,236
Total.....	29,994,648

NOTE.—No information is available regarding the amount of coin in circulation.

NOTE.—Although Kruger gold pieces (pounds sterling) are legal tender in the Union of South Africa, these coins are no longer minted. The Australian pounds sterling are also legal tender, and are to be found in circulation. The 4 and 5 shilling pieces (silver) are no longer coined and, although they are legal tender, their use is limited.

Notes outstanding at the end of the year 1916.

Designation.	Notes outstanding.
Banks of issue.....	\$16,701,726

NOTE.—No Government notes are issued. The banks issue certain legal-tender notes, which are covered by securities of equal value deposited with the Government.

ACTUAL CURRENCY OF THE COLONY.

Gold is the standard currency of the Union of South Africa. Silver is legal tender up to forty (40) shillings and copper up to one (1) shilling.

The following is an extract of the mint laws for the South African Republic now in force in the Union of South Africa:

(a) Gold coins: A coin of 1 pound sterling, the standard weight of which shall be 7.98805 grams; a coin of one-half pound sterling, the standard weight of which shall be 3.99402 grams.

(b) Silver coins: A coin of 5 shillings, the standard weight of which shall be 28.2759 grams; a coin of 2 shillings and 6 pence, the standard weight of which shall be 14.13795 grams; a coin of 2 shillings, the standard weight of which shall be 11.31036 grams; a coin of 1 shilling, the standard weight of which shall be 5.65518 grams; a coin of 6 pence, the standard weight of which shall be 2.82759 grams; a coin of 3 pence, the standard weight of which shall be 1.41379 grams.

(c) Bronze coins: A coin of 1 penny, the standard weight of which shall be 9.44984 grams; a coin of one-half penny, the standard weight of which shall be 5.66990 grams.

Paragraph 5 of the law provides that each coin of 1 pound sterling shall contain 7.3224 grams of pure gold, and each coin of one-half of 1 pound sterling shall contain 3.6622 grams of pure gold, so that the fineness of the gold coin shall be more than 11/12 of fine gold and less than 1/12 alloy. The fineness of the silver coin shall be 37/40 fine silver and 3/40 alloy. The bronze coins shall be of mixed metal—copper, tin, and zinc.

1914-15.....	125	£532	\$2,589
1915-16.....	169	718	3,494

Gold produced from mines of the country during the calendar year 1915.

Source of product.	Kilograms (fine).	Value.	United States equivalent.
Domestic production: From deep mines, placer mining, dry or silicious ores, lead and copper ores.....	60,559.1842	£8,270,339	\$40,247,605

[From Forty-sixth annual report of the deputy master and comptroller of the mint, London, 1915.]

An increase of 8,000 ounces in the output of gold in New South Wales in 1915 was reported, and there was also a small increase in the Queensland output. The proportion of gold produced in these two States, deposited at this branch mint, was also greater than in 1914, practically all the gold produced in Queensland finding its way to Sydney, but this increase was more than balanced by a decrease of 60,000 ounces in the deposits from New Zealand, due to the embargo placed on the export of gold therefrom.

The amount of the product given in the above statement was distributed as follows:

States of origin.	Gold.	
	Kilograms (fine).	Value.
New South Wales.....	4,121.1929	£562,819
Victoria.....	10,235.2692	1,397,793
Queensland.....	7,766.9640	1,060,703

PART I

REPORT OF THE DIRECTOR ON THE OPERATIONS OF THE MINT SERVICE FOR THE FISCAL YEAR 1929

REPORT OF THE DIRECTOR OF THE MINT

TREASURY DEPARTMENT,
BUREAU OF THE MINT,
Washington, D. C., September 13, 1929.

SIR: In compliance with the provisions of section 345, Revised Statutes of the United States, I have the honor to submit herewith a report covering the operations of the mints and assay offices of the United States for the fiscal year ended June 30, 1929, being the fifty-seventh annual report of the Director of the Mint. There is also submitted for publication in connection therewith the annual report of this bureau upon the production and consumption of the precious metals in the United States for the calendar year 1928.

OPERATION OF THE MINTS AND ASSAY OFFICES

Institutions of the Mint Service

During the fiscal year ended June 30, 1929, 10 mint-service institutions were in operation; coinage mints at Philadelphia, San Francisco, and Denver; assay office at New York, which makes large sales of fine gold bars; mints at New Orleans and Carson City conducted as assay offices; and assay offices at Boise, Helena, Seattle, and Salt Lake City. The six last-named institutions are, in effect, bullion-purchasing agencies for the large institutions and also serve the public by making assays of ores and bullion. Electrolytic refineries are operated at the New York, Denver, and San Francisco institutions.

Coinage

The coinage feature of the fiscal year ended June 30, 1929, was a greater output of pieces than for any fiscal year since 1921. This was incident to a greater coinage for foreign governments, for the same period, and to the increased demand for 1-cent pieces. The total number of domestic pieces executed was 361,650,350; foreign pieces, 46,651,000; grand total, 408,301,350 pieces, as compared with the prior year's 252,776,335 domestic, 2,490,000 foreign, and 255,266,335 total pieces. The total value of the year's domestic coinage was \$51,659,050, consisting of \$39,945,000 gold, \$7,488,700 subsidiary silver, \$1,438,700 nickel, and \$2,786,650 bronze. Gold coins were made at the Philadelphia mint only.

The coinage for foreign governments consisted of 25,000 gold pieces for Costa Rica, 6,400,000 silver and 2,800,000 nickel pieces for Venezuela, 3,060,000 silver, 25,000,000 nickel, and 2,016,000 bronze pieces for Ecuador, 750,000 silver and 100,000 nickel pieces for Nicaragua, 1,500,000 nickel pieces for Panama, and 5,000,000 nickel pieces for Salvador. The Salvador coinage was made at the San Francisco Mint; all the other foreign coinage was made at the Philadelphia Mint.

Gold Operations

Gold acquired by the Government at the several mint-service institutions during the fiscal year 1929 totaled \$249,716,845.02. United States gold coin received by the mints for recoinage amounted to \$2,589,765.56; transfers of gold between mint offices totaled \$251,395,967.56; the aggregate amount of gold received by the several mint-service institutions during the fiscal year 1929 was \$503,702,578.14, which compares with \$411,975,037.33 during the prior year.

Silver Operations

Receipts of purchased silver during the fiscal year 1929 totaled 2,469,942.50 fine ounces, the average cost of which was 57.51 cents per ounce, total cost being \$1,420,504.81. Of this amount of 2,469,942.50 fine ounces, a total of 1,509,435.98 was silver contained in gold deposits. Silver received in exchange for bars bearing the Government stamp totaled 1,401,825.65 fine ounces; United States silver coin received for recoinage totaled 2,524,217.27 fine ounces, the recoinage value being \$3,489,500.29; silver deposited in trust by other governments totaled 1,433,334.62 fine ounces; and transfers between mint-service offices totaled 1,636,070.32 fine ounces, making the aggregate quantity of silver received by the several mint-service offices during the fiscal year 9,465,390.36 fine ounces, as compared with 10,365,087.92 ounces during the prior year.

The New York market price of silver during the fiscal year ended June 30, 1929, averaged \$0.57045; the lowest price was \$0.51625 on June 4, 1929, and the highest price \$0.59875 on July 27, 1928.

Refineries

The mint-service refineries that are operated at New York, Denver, and San Francisco produced 2,869,216 fine ounces (98.37 tons) of electrolytically refined gold during the past fiscal year, which compares with 82.16 tons in the prior year; and 3,310,257 fine ounces (113.5 tons) of electrolytically refined silver, which compares with 108.1 tons during the prior year.

The stock of gold and silver in unrefined bullion on hand was reduced during the past year by about 19 tons to 412 tons, as compared with the prior year's reduction of about 6 tons. The Denver refinery operated only during the last half of the fiscal year, as during the prior year.

Additions and Improvements

At the Philadelphia mint the high pressure steam plant, which generated the electric power used at the mint and which had been in use ever since the building was completed in 1901, was shut down February 10, 1929, and replaced with two electric generating sets of 300 kilowatts each. Power purchased from the local power company is delivered at 2,300 volts, alternating current, and converted to 220 volts, direct current. Current for lighting purposes is converted to 220 volts, alternating current, through transformers. A material saving in power costs over the steam generating plant has been shown, due mainly to reduction of labor force and decreased consumption of coal. A contract has been let for a 75-kilowatt generator which will

Obverse

Reverse

MEDAL AWARDED THOMAS A. EDISON BY THE CON-
GRESS OF THE UNITED STATES

shortly be installed; this smaller set will be used to generate power for elevators, and to produce power required when the plant is only partially operated. It will also be used in connection with one of the larger sets when the load is heavy for one and not sufficient to warrant the operation of the two larger sets.

A new compressor used in connection with lacquering medals has been installed in the medal room, as well as an improved drying cabinet. These improvements have made for better finishes on medals and for 50 to 75 per cent saving over the time required to do similar work prior to making the new installations. The use of chromium-plated coinage dies and collars, initiated during the prior fiscal year, on the pure nickel coinage undertaken for the Government of Ecuador permitted execution of this coinage with a minimum amount of difficulty, although the average life of dies used was shorter than in stamping cupro nickel. The blanks or disks for this coinage were purchased ready for stamping, the mint being without facilities for properly working pure nickel, a very refractory metal.

At the San Francisco mint a new vault has been installed, of the double deck, compartment type, with 13 compartments on each of the two floors. It is 50 feet by 23 feet 8 inches, by 16 feet 10 inches high, inside, with approximately 12,000 cubic feet of storage space in the compartments. Most of the compartments are 9 feet 3 inches by 6 feet 7 inches and either 8½ feet or 7½ feet high. The floors are served by a push-button-controlled elevator, and a ventilating system serves each compartment.

Six improved oil-burning crucible melting furnaces with their accessories were built and installed in the old electric furnace room and will be placed in operation in the near future.

The following apparatus has been installed in the refinery: A 2 compartment hood built of 1½-inch thick Transite board, and table of 3-inch thick reinforced concrete, in the silver nitrate room, taking the place of a badly damaged Alberene stone hood which had been in service for 20 years. Better ventilation of this room has been provided.

A gas-fired assay muffle furnace has been placed in the laboratory, and two electric-driven fuel-oil pumps for use in connection with the melting furnaces.

An oil-fired cupel furnace having a capacity of approximately 3,000 ounces silver is under construction.

At the Denver mint a structural steel hood is being erected over the refinery melting furnaces to convey dust, fumes, and gases to settling chambers and flues, for the recovery of their metallic values. A gas dryer has been erected to drive off moisture contained in materials and products from regular and clean-up operations, resulting in much saving of labor and time. A number of safety devices have been installed.

EDISON MEDAL

The Congress of the United States, by joint resolution of May 29, 1928, authorized the striking of a medal commemorative of the achievements of Thomas A. Edison, in illuminating the path of progress through the development and application of inventions that

have revolutionized civilization in the last century. The medal was designed and modeled by J. R. Sinnock, engraver of the mint, and executed in gold at the United States Mint at Philadelphia. On the obverse is a portrait of Mr. Edison with the name EDISON; a symbol representing electricity; the year 1928 and the designer's monogram. On the reverse appears a kneeling figure of Prometheus, benefactor of mankind, represented as giving to the modern world a new form of light, heat, and power, symbolized by a small sun; a group of skyscraper buildings to represent the present age; and the phrases—medal of the Congress of the United States—he illuminated the path of progress by his inventions.

STOCK OF COIN AND MONETARY BULLION IN THE UNITED STATES

On June 30, 1929, the estimated stock of domestic coin in the United States was \$2,372,677,257, of which \$1,407,888,924 was gold, \$539,960,849 standard silver dollars, \$304,187,449 subsidiary silver coin, and \$120,640,035 minor coin.

The stock of gold bullion in the mints, assay offices, and Federal reserve banks on the same date was valued at \$2,916,461,936, an increase during the year of \$136,288,720; the stock of silver bullion was 10,431,829.93 fine ounces, a decrease of 434,191.11 fine ounces.

PRODUCTION OF GOLD AND SILVER

Domestic gold production during the calendar year 1928 was \$46,-165,400, as compared with \$45,418,600 in 1927. The output has declined to about 45 per cent of that for the record year 1915, when the total was \$101,035,700.

Silver of domestic production during 1928 totaled 58,462,507 ounces, valued at \$34,200,567; this compares with 60,434,441 ounces, valued at \$34,266,328, for 1927, and with the record production of 1915, 74,961,075 fine ounces, valued at \$37,397,300.

INDUSTRIAL CONSUMPTION OF GOLD AND SILVER

Gold consumption in the industrial arts during the calendar year 1928 is estimated at \$59,080,659, of which \$31,569,500 was new material.

Silver used in the arts is estimated at 35,547,663 fine ounces, of which 24,931,283 fine ounces was new material.

As compared with the prior year, silver consumption was about 3,100,000 ounces less, and gold consumption decreased about \$238,000.

IMPORT AND EXPORT OF DOMESTIC GOLD COIN

The net import of domestic gold coin during the fiscal year ended June 30, 1929, was \$45,065,099; during the prior fiscal year there was net export of \$218,739,072. During the 15 fiscal years 1915-1929, since the opening of the World War, there has been a net export of \$1,114,893,152. Since 1870 the net export of domestic gold coin has been \$1,992,542,216, as per tabulation by fiscal years, which may be found in another section of this volume.

APPROPRIATIONS, EXPENSES, AND INCOME

Appropriations available for mint service during the fiscal year 1929 totaled \$1,709,463, and reimbursements to appropriations for services rendered amounted to \$138,360.29, making a total of \$1,847,823.29.

Expenses amounted to \$1,757,855.44, of which \$1,694,473.88 was chargeable to appropriations and \$63,381.56 chargeable to income. A single appropriation was provided by the Congress for the 1930 expenses of the 10 mints and assay offices, in lieu of 4 appropriations for the fiscal year 1929, 20 appropriations for each of several prior years, and 30 annual appropriations theretofore. This adds to administrative flexibility and reduces accounting work.

The income realized by the Treasury from the mint service aggregated \$5,721,339.06, of which \$5,102,765.79 was seigniorage. The seigniorage on subsidiary silver coin was \$1,561,296.35; on nickel coin, \$1,103,279.68; and on bronze coin, \$2,438,189.76.

REPORT OF THE DIRECTOR OF THE MINT

Coinage

Details of the coinage executed during the fiscal year ended June 30, 1929, follow:

Denomination	Philadelphia	San Francisco	Denver	Total	
				Value	Pieces
Double eagles.....	\$35,595,000			\$35,595,000	1,779,750
Half eagles.....	3,310,000			3,310,000	662,000
Quarter eagles.....	1,040,000			1,040,000	416,000
Total gold.....	39,945,000			39,945,000	2,857,750
Half dollars.....		\$865,000		865,000	1,730,000
Quarter dollars.....	1,701,000	661,000	\$406,900	2,768,900	11,075,600
Dimes.....	3,122,000	388,000	344,800	3,854,800	38,548,000
Total silver.....	4,823,000	1,914,000	751,700	7,488,700	51,353,600
Five cents, nickel.....	1,112,750	147,250	178,700	1,438,700	28,774,000
One cent, bronze.....	1,878,570	413,780	494,300	2,786,650	278,665,000
Total minor.....	2,991,320	561,030	673,000	4,225,350	307,439,000
Total value.....	\$47,759,320	\$2,475,030	\$1,424,700	\$51,659,050	
Total pieces.....	250,993,750	52,577,000	58,079,600		361,650,350
Prior fiscal year:					
Total value.....	\$218,506,437	\$38,820,960	\$5,029,400	\$262,356,797	
Total pieces.....	177,249,000	34,769,000	40,757,400		252,776,335

The coinage by the United States mints for other countries during the same period totaled 46,651,000 pieces as compared with 2,490,000 during the prior year, as follows:

Country and denomination	Gold pieces	Silver pieces	Nickel pieces	Bronze pieces
Costa Rica: 2 colones.....				
Venezuela:	25,000			
5 bolivar.....				
2 bolivar.....		800,000		
1 bolivar.....		1,500,000		
½ bolivar.....		2,500,000		
¼ bolivar.....		400,000		
12½ centime.....		1,200,000		
5 centime.....			800,000	
Ecuador:			2,000,000	
2 sucre.....				
1 sucre.....		180,000		
50 centavo.....		1,880,000		
10 centavo.....		1,000,000		
5 centavo.....			5,000,000	
2½ centavo.....			16,000,000	
1 centavo.....			4,000,000	
Nicaragua:		750,000		2,016,000
10 centavo.....				
5 centavo.....				
Panama:			100,000	
5 centime.....				
2½ centime.....			500,000	
Salvador: 1 centavo.....			1,000,000	
Total.....			5,000,000	
Previous fiscal year.....	25,000	10,210,000	34,400,000	2,016,000
		1,890,000	100,000	500,000

The Salvador coins were struck at San Francisco; all others at Philadelphia.

Issue of Fine Gold Bars for Gold Coin and Gold Bullion

The value of the fine gold bars issued in exchange for gold coin and bullion monthly by the United States Mints at Philadelphia, San Francisco, and Denver, and the assay office at New York, during the fiscal year 1929 was as follows:

EXCHANGED FOR GOLD COIN OR OTHER GOLD ASSETS

Month	Philadelphia	San Francisco	Denver	New York	Total
1928					
July	\$45,385.19	\$425,912.78		\$56,990,760.37	\$57,462,058.34
August	55,655.38	686,367.49	\$5,008.48	3,642,771.61	4,389,802.96
September	80,452.49	217,772.20		6,269,428.13	6,567,652.82

Purchase of Minor-Coinage Metal for Use in Domestic Coinage

During the fiscal year 1929 there were purchased at the mint at Philadelphia 21,795,155.63 troy ounces of minor-coinage metals at a cost of \$301,776.63, which includes 2,883,835.93 troy ounces in nickel blanks prepared for stamping, costing \$96,662.08.

There were also purchased during the same period at the mint at San Francisco 3,832,736.42 troy ounces of minor-coinage metals at a cost of \$43,759.31. The Denver Mint purchased 5,138,115.26 troy ounces of minor-coinage metals for use in coinage, costing \$66,626.48.

Minor-Coin Distribution Costs

The minor-coinage distribution costs paid during the fiscal year 1929 from the profits on minor coinage amounted to \$61,960.81, as follows:

Transportation.....	\$53,505.56
Insurance.....	56.94
Containers.....	8,398.31
Total.....	61,960.81

Minor Coins Outstanding

The following statement shows the coinage of minor coins, by denominations, the amount on hand, issued, melted, and outstanding June 30, 1929. Minor coins were first manufactured at the Philadelphia Mint in 1793; at the San Francisco Mint in 1908; at the Denver Mint in 1911.

Denominations	Coined	On hand	Issued (net)	Melted	Amount issued and outstanding June 30, 1929
Philadelphia:					
Copper cents.....	\$1, 562, 887. 44	-----	\$1, 562, 887. 44	\$382, 917. 26	\$1, 179, 970. 18
Copper half cents.....	39, 926. 11	-----	39, 926. 11	. 59	39, 925. 52
Copper nickel cents.....	2, 007, 720. 00	-----	2, 007, 720. 00	808, 293. 32	1, 199, 426. 68
Bronze 1-cent pieces.....	44, 545, 696. 83	\$592, 022. 83	43, 953, 674. 00	1, 056, 628. 07	42, 897, 045. 93
Bronze 2-cent pieces.....	912, 020. 00	-----	912, 020. 00	343, 065. 98	568, 954. 02
Nickel 3-cent pieces.....	941, 349. 48	-----	941, 349. 48	286, 869. 88	654, 479. 60
Nickel 5-cent pieces.....	65, 807, 423. 10	92, 914. 75	65, 714, 508. 35	6, 278, 034. 00	59, 436, 474. 35
Total.....	115, 817, 022. 96	684, 937. 58	115, 132, 085. 38	9, 155, 809. 10	105, 976, 276. 28
San Francisco:					
Bronze 1-cent pieces.....	4, 373, 860. 00	321, 360. 00	4, 052, 500. 00	25, 007. 28	4, 027, 492. 72
Nickel 5-cent pieces.....	3, 797, 250. 00	304, 450. 00	3, 492, 800. 00	155, 218. 14	3, 337, 581. 86
Total.....	8, 171, 110. 00	625, 810. 00	7, 545, 300. 00	180, 225. 42	7, 365, 074. 58
Denver:					
Bronze 1-cent pieces.....	4, 557, 200. 00	261, 164. 74	4, 296, 035. 26	20, 070. 87	4, 275, 964. 39
Nickel 5-cent pieces.....	5, 371, 615. 00	57, 660. 00	5, 313, 955. 00	278, 005. 35	5, 035, 949. 65
Total.....	9, 928, 815. 00	318, 824. 74	9, 609, 990. 26	298, 076. 22	9, 311, 914. 04
Grand total.....	133, 916, 947. 96	1, 629, 572. 32	132, 287, 375. 64	9, 634, 110. 74	122, 653, 264. 90
Deduct \$5.05 copper cents, \$19.04 2-cent pieces, and \$94.08 3-cent nickel pieces melted at San Francisco Mint, coined at Philadelphia.....				\$118. 17	
Deduct \$12.32 bronze 2-cent pieces and \$1.38 nickel 3-cent pieces melted at Denver Mint, coined at Philadelphia.....				13. 70	
					131. 87
Total amount outstanding.....					122, 653, 133. 03

¹ There is no record of the melting of the old copper half cents, but it is believed that few, if any, are now in circulation.

Operations of the Assay Departments

The principal work of the assay departments of the coinage mints and the assay office at New York during the fiscal year 1929 is summarized as follows:

Items	Philadelphia			San Francisco

Proof Bullion (1.000 Fine)

In order to establish uniformity in assay of bullion in the offices of the mint service all proof gold and proof silver is made at the mint at Philadelphia and furnished to other offices when required.

The amount made during the fiscal year 1929 was: Gold, 500 ounces, silver, 267 ounces.

Operations of the Melting and Refining and of the Coining Departments, Fiscal Year 1929

The aggregate quantity of metals operated upon in the above-mentioned departments of the coinage mints and assay office at New York during the fiscal year ended June 30, 1929, was 15.4 million fine ounces of gold and 31.3 million fine ounces of silver. There were also operated upon at the coinage mints 108.8 million ounces of minor coinage metal. The figures in the table following are based on the figures obtained at the settlements of the accounts.

Legal limits of wastage on the whole amount delivered by the superintendent to operative officers, as prescribed in section 3542, Revised Statutes, are as follows: Melter and refiner—gold, 0.001; silver, 0.0015; coiner—gold, 0.0005; silver, 0.001.

Refining Operations

The net product of electrolytically refined gold and silver of the mint service during the fiscal year 1929 was 6,179,473.308 fine ounces; other electrolytic output included the equivalent of the refined metals used for aiding the processes, 2,140,613.262 fine ounces; the product of melting operations (only) totaled 1,387,829.942 fine ounces, making the total output of the refineries 9,707,916.512 fine ounces. Details are shown in the following table:

Wastage of Coinage Metal, and Loss on Sale of Sweeps

The value of metals wasted in the operative departments during the fiscal year ended June 30, 1929, was \$2,472.36. A loss of \$3,454.38 occurred from the difference between the assay value of the bullion contained in sweeps sold and the amount received for the same. Details are given in the table following:

Item	Mint at—			Assay office at New York	Total
	Philadel- phia	San Fran- cisco	Denver		
Silver wastage:					
Melting and refining department.....	\$324. 85	-----	-----	-----	\$324. 85

Total reimbursements.....	2, 815. 10	635. 37	2, 148. 21	328. 06	5, 926. 74

Engraving Department

During the fiscal year ended June 30, 1929, the engraving department made 2,710 working dies for domestic coinage. Master dies, hubs, and working dies were made for domestic, Philippine, Ecuadoran, Venezuelan, Panaman, Nicaraguan, Salvadoran and Costa Rican coinage, also for the Post Office, War, and Navy Departments.

Dies manufactured

Item	Issued to mint at—			Manila, P. I.	Total
	Phila- delphia	San Fran- cisco	Denver

Laboratory, Bureau of the Mint

From the domestic coinage of the calendar year 1928 the assayer of this bureau examined and tested 142 gold coins and 396 silver coins, all of which were found within the legal requirements as to weight and fineness.

The following table summarizes results of fineness tests on domestic coins, the limit of tolerance being one one-thousandth above or below 900 for gold coins, and three one-thousandths above or below 900 for silver coins.

REPORT OF THE DIRECTOR OF THE MINT

Fineness (thousandths)	Number of gold coins, Philadelphia	Number of silver coins			
		Philadel- phia	San Fran- cisco	Denver	Total
898.6		1		1	2
898.8		2	3	2	7
899.0		21	21	4	46
899.3		16	13	5	34

		Proof gold used	10.13
		Proof silver used	7.87
		Inquartation silver used	72.28

Early in the year the bureau assayer inaugurated an extensive investigation of the preparation and spectrochemical analysis of proof gold. This investigation has not been completed, but is being continued.

Assay Commission's Annual Test of Coin

Section 3547 of the Revised Statutes provides for an annual test of the domestic coinage executed during the calendar year 1928, by a commission, of whom part are ex officio members, the others being appointed, without compensation, by the President. The purpose is "to secure a due conformity in the gold and silver coins to their respective standards of fineness and weight." The commission, which met at the Philadelphia Mint February 13 and 14, 1929, reported the following results of their examination:

In accordance with section 3539 of the Revised Statutes your committee on counting reports that the packages containing the pieces reserved by the several mints for the trial of coins were delivered to us by the superintendent at Philadelphia, and upon comparison with the transcripts kept by the Director of the Mint were found to be correct.

From the deliveries of each month a liberal number of packages were selected from all denominations coined, and the coins contained therein were counted and found to agree with the number called for in each package.

The reserved coins were then delivered to the committees on assaying and weighing. In the reports of those committees will be found an account of the disposition of these coins.

The committee on weighing report that they have taken at random from the several parcels of reserved coins of each mint such a number of pieces of each of the denominations represented and so distributed, by dates of coinage, as seemed to be sufficient for the purposes of weighing. These coins have been individually weighed by the committee and their respective weights ascertained to an accuracy of 0.01 grain, and the results recorded. The weights of these coins are given in the appended table. It will be noted that every coin weighed was well within the deviation allowed by law.

The coins were directly weighed against a set of sealed coin weights, supplemented by three sets of grain weights, delivered to the commission from the Bureau of Standards, Washington, D. C., in sealed packages, and accompanied by certificates signed by the director of the bureau. The weighings were made on a Troemner balance belonging to the Philadelphia Mint. Prior to the weighings of the coins this balance was tested by your committee as to equality of arms and sensibility and found to be in excellent condition and entirely satisfactory for the purpose of the committee.

Following the weighing of the coins your committee tested the sensibility of the balance used to compare the working standard Troy pound weight of the Philadelphia Mint, and the summation of working standard weights of 10 ounces+2 ounces was found to equal the Troy pound within the sensibility of the balance (about 0.0001 Troy ounce).

The deviations from standard of the heaviest and lightest coins weighed, of each denomination from each mint, are shown in the following table:

Denomination	Legal deviation allowed	Philadelphia		San Francisco		Denver	
		Heavy	Light	Heavy	Light	Heavy	Light
GOLD COINS							
Double eagle-----	Grains 0.5	Grains 0.30	Grains 0.21	Grains	Grains	Grains	Grains

The foregoing report, covering the operations of the mints and assay offices of the United States for the fiscal year ended June 30, 1929, is respectfully submitted.

R. J. GRANT,
Director of the Mint.

Hon. ANDREW W. MELLON,
Secretary of the Treasury.

REPORT ON PRODUCTION AND CONSUMPTION OF GOLD AND SILVER IN THE UNITED STATES DURING THE CALENDAR YEAR 1928

Introduction

The official estimate of the production of gold and silver in the United States is made by the Bureau of the Mint with the cooperation of the Bureau of Mines, the latter making a mine estimate in each year and the former working backward from that estimate through refining, smelting and other production work. The year production estimate made by the former. The official estimate represents the material received at mint service offices and private refiners. The difference between this estimate and the mine estimate is therefore a result of the loss to the Government treasury in the

PART II

REPORT OF THE DIRECTOR OF THE MINT ON THE PRODUCTION AND CONSUMPTION OF GOLD AND SILVER IN THE UNITED STATES DURING THE CALENDAR YEAR 1928

REPORT ON PRODUCTION AND CONSUMPTION OF GOLD AND SILVER IN THE UNITED STATES DURING THE CALENDAR YEAR 1928

Introduction

The official estimate of the production of gold and silver in the United States is made by the Bureau of the Mint with the cooperation of the Bureau of Mines, the latter making a mine canvass in each State and the former working backward from mint deposits through refineries, smelters, and other reduction works to the mine production estimate made by the former. The official estimate represents the material received at mint service offices and private refineries. The difference between this estimate and the mine production estimate is almost entirely due to the time element involved in the reducing processes, since differences for series of years are shown by comparison to practically offset each other. The two systems thus verify and support each other.

The gold production of the United States, including its insular dependencies, for the calendar year 1928 is estimated to have been \$46,165,400, and the production of silver is estimated at 58,462,507 fine ounces. A comparison of these figures with those for 1927 indicates \$746,800 increase in production of gold and approximately 2,000,000 ounces decrease in silver production.

As regards individual States, the outstanding differences in gold production as compared with the prior year are an increase by Alaska of about \$900,000 and a decrease by California of about \$1,000,000.

Individual States' material differences in silver production as compared with the prior year include decreases of approximately 1,100,000 ounces in Montana, and about 1,600,000 ounces in Utah.

A brief review of mining conditions, for which acknowledgments are made to the United States Bureau of Mines, follows; the production figures therein differ as explained above, from the Bureau of the Mint production estimates. Further information concerning same can be obtained by those interested by addressing the last-named bureau at Washington.

ALASKA

Alaska mines in 1928 produced gold valued at \$6,845,000, compared with an output of \$5,927,000 in 1927. The value of silver produced in Alaska in 1928 was \$266,000, or about \$90,000 less than in 1927.

In 1928 about 51.1 per cent of the total gold production came from lode mines, compared with 49.7 credited to lode mines in 1927, and 43.8 per cent in 1926.

The auriferous lode mines produced during the year gold valued at \$3,498,000 and silver valued at \$47,000. The copper ores contained \$205,200 in silver.

The value of the placer gold produced in Alaska in 1928 was \$3,347,000 compared with an output of \$2,982,000 in 1927. The silver recovered from placer mining operations in 1928 was valued at \$14,000. It seems probable that the production of placer gold will be somewhat increased when several of the large mining enterprises now in course of development have completed their preparatory work.

Twenty-seven gold dredges were operated in Alaska in 1928, one less than in 1927. The dredges in 1928 handled about 6,620,000 cubic yards of gravel and produced gold valued at \$2,185,000, against a production in 1927 of \$1,740,000. The increase is largely attributable to the operation of larger units handled with greater engineering efficiency. The total output of the dredges since this form of mining was introduced now amounts to \$36,076,000.

ARIZONA

Arizona produced gold in 1928 valued at \$3,967,488, a decrease of \$177,103 from that of 1927, according to C. N. Gerry, of the United States Bureau of Mines. The larger part of the gold, or \$2,624,753, had its source in crude ore smelted. Gold in bullion from ore treated by amalgamation or cyanidation, which decreased, was valued at \$298,149; and gold in concentrate was valued at \$1,036,285. The gold from lode mines was derived from the following sources: Copper ore, \$3,329,643; dry or siliceous ore, \$466,842; lead ore, \$70,277; copper-lead ore, \$79,023; and lead-zinc ore, \$15,303. Gold from siliceous ore, chiefly from Mohave County, decreased about 26 per cent. Nearly 84 per cent of the State's gold came from copper ore, while placers produced only \$6,400 in gold. No dredges were operated. The largest producers of gold were the United Verde, Copper Queen, Calumet & Arizona, New Cornelia, United Verde Extension, and Magma mines.

The silver output amounted to 6,791,351 ounces, a decrease of 56,329 ounces from the output of 1927. Silver from copper ore increased slightly as did that from siliceous ore. The sources of the silver output were: Copper ore, 5,885,625 ounces; lead ore, 263,130 ounces; siliceous ore, 486,842 ounces; copper-lead ore, 60,162 ounces; lead-zinc ore, 95,546 ounces; and placers, 46 ounces. The largest silver producers were the United Verde, Calumet & Arizona, Magma, Copper Queen, and United Verde Extension mines.

There were 320 mines producing during the year, of which number 22 only were placer mines.

CALIFORNIA

The total recoverable gold in ore and gravels treated in California in 1928, according to Victor C. Heikes of the United States Bureau of Mines, was valued at \$10,785,315, of which 287 lode operations yielded \$5,934,686 and 460 placer operations \$4,850,629. Compared with the gold yield in 1927, this was a decrease of \$885,703. Much of this loss was due to the decreased output by the dredges. Lode mining yielded 55 per cent and placer mining 45 per cent of the total gold produced in 1928. Yuba County exceeded all other counties in the State in gold output, followed next in rank by Amador, Nevada, and Sacramento, all of which produced more than \$1,000,000 each in gold. Of the lode-gold output, gold ore and tailings yielded 93 per cent, copper ore and tailings 6 per cent, and silver ore 1 per cent; of the placer-gold output, dredges yielded 91 per cent, surface placers 4 per cent, drift placers 3 per cent, and hydraulic placers 2 per cent. The gold output of 24 dredges (25 in 1927) was 19 per cent less than in the preceding year. Twenty-six companies in the State produced more than 1,000 ounces of gold each and contributed nearly 90 per cent of the total gold output.

The production of silver in California was 1,478,771 ounces, valued at \$865,081, a decrease of 141,471 ounces in quantity and of \$53,596 in value compared with 1927. Named in order of output the silver-producing counties were San Bernardino, Plumas, Mono, and Shasta, none of which yielded as much as 750,000 ounces of silver each. Three companies in the State produced between 100,000 and 500,000 ounces of silver, 5 between 10,000 and 50,000 ounces, and 6 between 5,000 and 10,000 ounces. Of the total silver output from lode operations in the State, 63 per cent came from dry silver ore, 28 per cent from copper ore and tailings, and nearly 3 per cent from lead ore, with a small amount from lead-copper ore. The yield of silver from placer mines was 17,211 ounces.

COLORADO

According to Charles W. Henderson, United States Bureau of Mines, the production of Colorado metal mines in 1928, in terms of gross value of recovered and recoverable content of gold, silver, copper, lead, and zinc, at average yearly prices, was \$16,375,355. Of this, gold amounted to \$5,304,876 and silver to 4,052,203 fine ounces, valued at \$2,370,568. The gold production came chiefly from the following districts: The Cripple Creek district, Teller County, \$3,059,181; the San Juan region of Dolores, La Plata, Rio Grande, Saguache, San Juan, and San Miguel Counties, \$1,194,082; Lake County, \$244,766; Boulder, Clear Creek, and Gilpin Counties, \$192,039; Park County, \$254,699; and Summit and Eagle Counties combined, \$80,647. The silver production came chiefly from the following districts: Boulder, Clear Creek, and Gilpin Counties, 198,689 ounces; Eagle and Summit Counties, 297,270 ounces; the San Juan region counties, including also Mineral County, 2,984,359 ounces; Pitkin County, 96,764 ounces; and Lake County, 378,800 ounces.

Placer mines yielded \$61,406 in gold, of which \$51,109 was recovered by dredging. The amalgamation process recovered 56,781.62 ounces of gold and 14,964 ounces of silver. The cyanidation process recovered 127,591.51 ounces of gold and 196,706 ounces of silver. The remainder of both gold and silver was recovered by smelting. Dry ores contributed 93 per cent of the gold and 57 per cent of the silver; lead-zinc ore contributed 5 per cent of the gold and 31 per cent of the silver; copper ore contributed 6 per cent, and lead ore 6 per cent, of the silver.

The total production of gold from Colorado from the discovery of gold in 1858 to 1928, inclusive, has been \$706,544,055, and that of silver 649,151,690 ounces.

CENTRAL STATES

The total mine production of silver in the Central States in 1928 was 197,139 ounces, valued at \$115,326, which was 135,503 ounces less than the output in 1927. All the silver from Michigan was derived from lode copper mines, and the production decreased from 97,193 ounces in 1927 to 17,153 ounces in 1928. The mine production of silver from Missouri decreased from 233,931 ounces in 1927 to 176,840 ounces in 1928. As none of the copper mines shipped

any ore, all of the silver was derived from lead ores mined in south-eastern Missouri. Part of the silver was recovered from lead skimmings and some from a lead-copper matte, but most of it was recovered from residues of zinc concentrates floated from lead ores treated by St. Joseph Lead Co. These zinc concentrates contain about 20 ounces of silver per ton, and the big increase in silver from Missouri mines during the last three years has been wholly from this source. The lead concentrates from southern Illinois fluorspar mines yielded 3,145 ounces of silver in 1928, which was 1,627 ounces more than in 1927.

EASTERN OR APPALACHIAN STATES

The mine production of gold in the Eastern or Appalachian States increased from 825.96 fine ounces, valued at \$17,074, in 1927, to 1,697.82 fine ounces, valued at \$35,097, in 1928. Pennsylvania produced \$20,506, Tennessee \$11,117, North Carolina \$2,366, Georgia \$911, and South Carolina \$197.

The placer mines yielded only \$820, of which \$255 was from Georgia, \$61 from North Carolina, \$197 from South Carolina, and \$307 from Tennessee. None of the placers produced as much as \$400. Siliceous gold ores in Georgia and North Carolina amounting to about 200 tons, yielded \$1,120. The largest shipper of gold bullion was the Stoney Ridge mine in Wilkes County, of Georgia. The copper ores and copper concentrates from pyritiferous magnetite ores yielded \$33,157 in gold, of which 89.06 fine ounces were from North Carolina, 522.93 ounces from Tennessee, and 991.98 ounces from Pennsylvania. There were reports of great activity at placer and gold lode mines in some southern States, but the production of bullion in 1928 from such sources was comparatively small.

The mine output of silver was 102,520 ounces, or 18,227 ounces more than in 1927. Only 3 ounces of silver was contained in placer bullion and 16 ounces in bullion from lode gold mines.

Copper ores yielded 102,501 ounces, of which Tennessee was credited with 75,556 ounces, North Carolina with 19,040 ounces, and Pennsylvania with 7,905 ounces which came from pyritiferous magnetite ores.

IDAHO

In 1928, according to C. N. Gerry, of the United States Bureau of Mines, Idaho's output of gold was valued at \$433,703 and that of silver \$5,264,023. There was an increase of \$117,100 in the production of gold and 96,921 ounces in the production of silver over that of 1927.

Gold increased from \$316,603 in 1927 to \$433,703 in 1928, as a result of increases at the property of the Idawa Gold Mining Co. in Boise County and the South Park Dredging Co. in Elmore County. Of this total the placer gold amounted to \$169,336, against \$155,459 in 1927; the gold won by three dredges was valued at \$133,418, an increase from \$114,116 in 1927.

Dry or siliceous ore produced more gold than any other kind of ore, or \$231,439; gold in lead ore was valued at \$10,086; copper ore, \$11,563; zinc ore, \$10; lead-zinc ore, \$11,250; copper-lead ore, \$10; and copper-lead-zinc ore, \$9. In 1928 more than 92 per cent of Idaho's gold came from placers and from siliceous gold ore. The

largest producers of gold were the Idawa Gold Mining Co. at Placerville, the South Park Dredging Co. at Featherville, the Idaho Gold Dredging Corporation at Centerville, and the American Gold Dredging Corporation at Triangle.

The silver output was 8,998,330 ounces, an increase of 96,921 ounces. Most of the silver, or 4,623,567 ounces, came from lead ore. Lead-zinc ore supplied 2,933,150 ounces; copper-lead ore, 1,146,294 ounces; copper ore, 262,938 ounces; siliceous ore, 29,203 ounces; zinc ore, 517 ounces; copper-lead-zinc ore, 123 ounces; and placers, 2,538 ounces. The Coeur d'Alene region alone produced 8,513,048 ounces of silver. The largest producers of silver were the Bunker Hill & Sullivan, Hecla, Morning, and Sunshine mines, all in the Coeur d'Alene region.

There were 207 mines producing during the year, of which 56 were placer mines and 151 lode mines.

MONTANA

Montana's mine output of gold in 1928, according to C. N. Gerry, of the United States Bureau of Mines, was valued at \$1,203,020, an increase of \$96,224. Of this total \$1,185,136 came from lode mines and \$17,884 from placers. There was a good increase in gold from lode mines, due chiefly to increased output of the larger producers of gold, such as the Anaconda properties at Butte, the Liberty-Montana mine in Madison County, the New Gould property north of Helena, and the Spring Hill mine of the Montana-Idaho Mines Corporation south of Helena. No dredges were operated and the placer output was less than that of 1927. The gold was derived principally from copper ore, which was the source of \$693,464. Gold from other sources was as follows: Siliceous ore, \$382,266; lead-zinc ore, \$88,953; lead ore, \$11,881; copper-lead ore, \$5,883; zinc ore, \$2,689; and placers, \$17,884. Nearly 73 per cent of the gold was produced by the Anaconda, Liberty-Montana, Montana-Idaho, and New Gould mines.

The output of silver decreased decidedly, from 11,200,077 ounces in 1927 to 10,853,276 ounces in 1928, of which more than 88 per cent was recovered from the mines at Butte. Silver from zinc ore decreased considerably, as well as that from copper ore; and that from siliceous ore, lead ore, and copper-lead ore was less than in 1927. There was, however, almost twice as much silver produced from lead-zinc ore. Copper ore supplied the largest quantity of silver, 5,705,513 ounces; lead-zinc ore, 4,108,498 ounces; zinc ore, 117,015 ounces; copper-lead ore, 402,705 ounces; siliceous ore, 340,876 ounces; and lead ore, 178,520 ounces. More than 77 per cent of the silver was produced from the Anaconda, Butte & Superior, Elm Orlu, Butte Copper & Zinc (Emma), and East Butte properties.

There were 279 producing mines, of which 236 were lode mines and 43 placer properties.

NEVADA

The gold output of Nevada in 1928, according to V. C. Heikes, of the United States Bureau of Mines, had a value of \$3,620,833, an increase as compared with \$3,107,931 in 1927. The Robinson (Ely) district, credited with \$1,442,902, exceeded all other districts in the State in gold output, chiefly on account of the increased quantity of

copper ore from the mines at Ely. The production of gold from the Jarbidge district was \$419,302, closely followed by the Tonopah district with \$415,035 and the Goldfield district producing \$279,373, largely recovered from old tailings, a decrease from that of 1927. The Comstock district produced only \$180,442 in gold, a marked decrease over past years. The largest producers of gold were the Nevada Consolidated Copper Co., Elgoro Mines Co., Consolidated Coppermines, and the Bradshaw (Inc.), which worked the Goldfield Consolidated tailings dump, followed by the Gold Circle Consolidated, Tonopah Mining Co., and The Flowery Mines. Most of the gold, \$2,073,454, came from siliceous ore. Copper ore supplied gold valued at \$1,416,661; lead ore, \$64,989; copper-lead ore, \$17,589; lead-zinc ore, \$9,874; and placers, \$48,266.

The production of silver was 5,481,574 ounces, an increase from 5,397,179 ounces in 1927. The mines of the Tonopah district in Nye and Esmeralda Counties produced 1,900,315 ounces, a decrease from 2,167,694 ounces in 1927. The production of silver from ore mined in the western part of the district in Esmeralda County in 1928 decreased 309,354 ounces. Comstock district, Storey County, decreased its output of silver from 62,051 ounces in 1927 to 37,679 ounces in 1928. Most of the silver of the State, 2,977,433 ounces, had its source in siliceous ore, the greater part of which was treated by cyanidation. Silver from lead ore amounted to 1,595,463 ounces; copper-lead ore, 485,946 ounces; copper ore, 258,519 ounces; lead-zinc ore, 165,374 ounces; and placers, 839 ounces. The largest producer of silver was the Consolidated Cortez mine, south of Beowawe, followed closely by the Tonopah Mining Co. Next in rank were the Betty O'Neal, Tonopah Extension, Bristol Silver, and Tonopah Belmont properties.

There were 359 mines producing in Nevada in 1928, of which 39 were placer mines and 330 were lode mines.

NEW MEXICO

The production of New Mexico metal mines in 1928, in terms of gross value of recovered and estimated recoverable content of gold, silver, copper, lead, and zinc at average yearly prices, according to Charles W. Henderson of the United States Bureau of Mines, was \$18,815,863, as compared with \$15,662,076 in 1927.

Copper is the metal of chief value produced in New Mexico. In 1928, the gross value of recoverable copper was \$12,939,069. The gold output in 1928 was \$680,360 and the silver 827,793 fine ounces. Comparative figures for 1927 were \$604,483 in gold and 890,083 fine ounces of silver. Copper ore in 1928 yielded 50 per cent of the gold and 24 per cent of the silver; lead-zinc ore yielded 46 per cent of the gold and 67 per cent of the silver; lead ore yielded 6 per cent of the silver.

Placer gold mines recovered only 65 ounces of gold and 17 ounces of silver. San Miguel County produced 46 per cent of the gold, Hidalgo 32 per cent, Grant 17 per cent, and Colfax nearly 3 per cent. San Miguel County produced 60 per cent of the silver, Grant County 18.5 per cent, Hidalgo 15 per cent; the remainder of the silver came from the 12 other counties.

OREGON

The gold yield from ore and gravels treated in Oregon in 1928, according to Victor C. Heikes, of the United States Bureau of Mines, was valued at \$225,968, of which 41 lode operations yielded \$105,443 and 90 placer operations \$120,525. Compared with the gold yield in 1927, this was a decrease of \$77,415 or 26 per cent. Gold mining in Oregon in 1928 was aided by the operations of a new dredge on Foots Creek in Jackson County and the production of a gold lode mine in Curry County, from which very high-grade specimen ore was recovered. There were only two dredges operating in Oregon in 1928, one of which did not begin operations until October. Grant County had the greatest yield of gold in 1928, followed by Jackson, Curry, and Josephine. In 1928 dry gold ore and tailings yielded 44 per cent, copper ore 2 per cent, dredges, hydraulic mines, and surface placers 53 per cent of the total gold output of Oregon. A small amount came from drift placers.

The production of silver in Oregon in 1928 was 30,924 ounces, valued at \$18,091, a decrease of 14,906 ounces in quantity and \$7,895 in value, compared with 1927. Grant was the only county producing silver ore and was first in rank of silver output. Of the total silver from lode mines, dry gold ore and tailings yielded 67 per cent, dry silver ore 6 per cent, copper ore 14 per cent, and lead ore 13 per cent. The yield of silver from placer mining was 779 ounces, valued at \$456.

SOUTH DAKOTA

According to Charles W. Henderson, United States Bureau of Mines, five lode mines and four small placers in South Dakota in 1928 produced in terms of recovered metals \$6,560,805 in gold and 90,547 ounces of silver. The Homestake mine at Lead, the largest producing gold mine in the United States, in its printed annual report stated that operating revenue for the calendar year 1928 included proceeds from 239 gold-silver bars as \$6,566,785 from 1,416,949 tons of ore milled, realizing an average of \$4.63445 to the ton, treated by amalgamation, followed by cyanidation of sands and slimes. Several cars of lead-silver ore were shipped to the Omaha smelter from the Cuyahoga mine, in Custer County, across the county line from Keystone; and at Keystone, the Keystone Consolidated Mines Co. operated its cyanidation mill part of the year, yielding gold bullion from ore from the Holy Terror and other claims. The Consolidated Power & Development Co. made a test run in an old cyanidation mill on property adjacent to the Holy Terror.

TEXAS

Seven mines in Texas, according to Charles W. Henderson, United States Bureau of Mines, produced in 1928 in terms of recovered and recoverable metals, \$10,115 in gold and 1,340,622 fine ounces of silver. The Presidio mine, at Shafter, worked almost continuously since 1884, yielded by cyanidation and concentration the largest yearly output in its history, 1,212,000 ounces, and the recovered gold was the highest ever recorded, 489 ounces. At the Hazel mine, 16 miles northwest of Van Horn, from the dump of which lessees shipped in

1927, the World Exploration Co. in 1928 pumped out the water from the shaft and shipped dry silver ore containing some copper, from underground workings, while lessees continued to ship dry silver ore containing copper and copper-silver ore from the dump to the El Paso smelter. Lead-silver ore from the Alpine district, dry silver ore and copper-silver ore from the Allamoore district, and lead-silver ore from Sierra Blanca district was shipped to the El Paso smelter.

The total output of gold from Texas mines from the first year of production—1885, to 1928, inclusive—mostly from the Presidio mine, has been \$64,986 and for silver 21,362,768 ounces.

UTAH

The value of the metal output of Utah was \$79,258,904 in 1928, an increase of \$5,632,272 over 1927, according to C. N. Gerry, of the United States Bureau of Mines. There was a large decrease in the production of lead, zinc, and silver, but a notable increase in gold and copper as compared with the production of 1927.

The gold output was valued at \$4,394,001, an increase of \$385,550 over that of 1927. Separated as to source, copper ore was most important, containing gold valued at \$2,380,657; lead-zinc ore supplied \$897,484 in gold; siliceous ore, \$528,656; lead ore, \$552,500; copper-lead ore, \$33,753; and placers \$951. The four largest producers of gold were the Utah Copper, Park Utah Consolidated, United States Smetling, Refining & Mining, and the Utah-Delaware Companies.

The silver production in Utah decreased from an output of 18,606,950 ounces in 1927 to 17,072,852 ounces in 1928. Separated as to source, the silver came principally from lead-zinc ore, which supplied 7,105,269 ounces, and from lead ore, which supplied 6,241,616 ounces; dry or siliceous ore supplied 2,355,975 ounces; copper ore, 1,275,682 ounces; copper-lead ore, 94,304 ounces; and placers, 6 ounces. The Tintic district in Juab and Utah Counties, produced 6,232,602 ounces, against 7,591,406 ounces in 1927. The Bingham district of Salt Lake County produced 3,728,942 ounces, against 3,582,084 ounces in 1927, and the Park City region, in Summit and Wasatch Counties, 6,745,826 ounces, against 6,935,267 ounces in 1927. The four largest producers of silver were the Tintic Standard, Park Utah Consolidated, Silver King Coalition, and Utah Copper Companies.

There were 124 producing properties in 1928, 3 of which were placers and 121 lode mines.

WASHINGTON

The output of gold in Washington in 1928, according to C. N. Gerry, of the United States Bureau of Mines, had a value of \$337,167, a decrease of \$66,213 from the production of 1927. Most of the gold of the State, or \$332,772, came from siliceous gold ore; copper ore supplied only \$2,418 in gold; lead ore, \$51; lead-zinc ore, \$11; copper-lead ore \$21; siliceous silver ore \$16; and placers, \$1,878. A large decrease in gold was recorded from the Republic district and the Boundary Red Mountain mine in Whatcom County produced less siliceous gold ore in 1928 than in 1927. Crude ore supplied \$259,955 in gold, ore treated by amalgamation \$73,136, and concentrates

\$2,198. Since 1860 Washington has produced \$30,258,099 in gold. The three largest producers of gold in Washington in 1928 were the Quilp, Boundary Red Mountain, and Surprise-Lone Pine-Pearl mines.

The output of silver in 1928 was 99,738 ounces, a decrease of 56,112 ounces, due to the large decrease in the shipments of siliceous ore from the Republic district. Of the total silver, 70,191 ounces had its source in siliceous ore, 22,937 ounces in copper ore, 5,414 ounces in lead ore, 445 ounces in lead-zinc ore, 721 ounces in copper-lead ore, and placers supplied 30 ounces. Crude ore supplied most of the silver, or 88,438 ounces; concentrates, 11,067 ounces; and ore treated by amalgamation, 203 ounces. The three largest producers of silver were the Surprise-Lone Pine-Pearl, Last Chance, and Quilp mines.

There were 37 lode mines and only one placer producing in 1928.

WYOMING

According to Charles W. Henderson, of the United States Bureau of Mines, metal mines in Wyoming in 1928 produced 33 ounces of gold and 53 ounces of silver, in terms of recovered metals. This output came from 3 mines; 1, a gold mine, equipped with an amalgamation mill, at Atlantic City, Fremont County; 1 on Muskrat Creek, Goshen County, which shipped a car of copper-silver ore to a smelter; and 1, a small prospect in Wind River Mountains, Sweetwater County, from which a few ounces of gold-silver bullion were panned, the results of which were not encouraging enough to pursue further.

The total production of gold from Wyoming, from the discovery of gold in 1842 to the end of 1928, was approximately \$1,240,000, and the output of silver for the same period 70,000 ounces.

Refinery production of gold mined in the several States and Territories in 1927 and 1928, with the increase and decrease in each for the latter year

Gold and Silver Used in Industrial Arts in the United States During the Calendar Year 1928

Among the purveyors of gold and silver bars for use in the industrial arts of the United States, the United States assay office at New York and the mint at Philadelphia hold the foremost places; consequently the larger portion of the material consumed in the arts is brought under Government notice and is a matter of public record.

The following table gives the value of the gold and the quantity of the silver bars issued by the Government institutions and private refineries during the calendar year 1928, with the classes of material from which they were made:

Gold and silver issued for use in the industrial arts during the year ended December 31, 1928

Items	Issued by—	Gold	Silver
Bullion.....		Dollars	Fine ounces
Bullion in various forms.....	Mints and assay offices.....	50,102,583	1,109,229
United States coin ¹	Private refineries.....	5,478,076	34,361,090
	Banks, etc.....	3,500,000	77,344
Total.....		59,080,659	35,547,663
Old jewelry, plate, scrap, etc., contained in private refineries' returns, and that returned to monetary use.....		27,511,159	10,616,380
New material.....		31,569,500	24,931,283

¹ Estimated; the quantity of silver is equivalent to 100,000 silver dollars.

Gold furnished for use in manufactures and the arts, and classification of the materials used, since 1880

¹ Amended figures.² Commemorative coins: Oregon Trail, \$25,014; Hawaiian, \$5,004.

The coinage for foreign governments by the mints of the United States¹ totaled 16,701,000 pieces as follows:

Country	Denomination	Gold pieces	Silver pieces	Nickel pieces	Bronze pieces
Costa Rica	2 colone	25,000			
Nicaragua	25 centavo		200,000		
Do	10 centavo		1,000,000		
Do	5 centavo			100,000	
Do	1 centavo				500,000
Ecuador	1 sucre		3,000,000		
Do	2 sucre		500,000		
Do	50 centavo		1,000,000		
Do	5 centavo			5,376,000	
Do	1 centavo			5,000,000	
Salvador	1 centavo				
Total		25,000	5,700,000	10,476,000	500,000

Deposits of foreign gold bullion and coin during the calendar year 1928

REPORT OF THE DIRECTOR OF THE MINT

Losses and Gains on Withdrawn Coin

The loss on face value of gold coin totaling \$2,610,854 withdrawn from circulation during the fiscal year 1929 was \$21,088.47, of which \$2,997.57 was reimbursable from the appropriation provided for that purpose. The loss on face value of silver coin totaling \$3,803,019.95 withdrawn from circulation was \$313,519.81, all being reimbursable from the appropriation provided. The reimbursable loss, provided for by appropriation, on minor coin totaling \$274,582.42 withdrawn during the fiscal year was \$14,988.25.

Standard silver dollars (mutilated) purchased as bullion for use in the manufacture of subsidiary silver coin, since 1883

¹ No net change during year in amount of earmarked gold coin held for foreign account.

NOTE.—The number of standard silver dollars coined to June 30, 1929, was 840,505,332, which added to the Hawaiian dollar coinage, 500,000 plus the number imported from the Philippine Islands, 150,000, and the number returned in Government transports, 496,859, equals 841,652,191. Since July 1, 1898, the number of standard silver dollars exported in transports has been 2,495,000, the net export from November, 1919, to July 20, 1920, in movement due to the high price of silver, was 28,287,142; those melted under the terms of the Pittman Act of April 23, 1918, totaled 270,232,722, those melted otherwise (mutilated, etc.) since 1883 numbered 221,149, and the number of Hawaiian dollars melted to June 30, 1929, was 455,329, a total disposition of 301,691,342, leaving in the United States on June 30, 1929, 539,960,849 standard silver dollars and 304,187,449 dollars in subsidiary silver coin.

¹ The amount of money held in trust against gold and silver certificates and Treasury notes of 1890 should be deducted from this total before combining it with total money outside of the Treasury to arrive at the stock of money in the United States.

² This total includes \$15,724,715 of notes in process of redemption, \$168,415,543 of gold deposited for redemption of Federal reserve notes, \$13,157,972 deposited for redemption of national-bank notes, \$1,950 deposited for retirement of additional circulation (Act of May 30, 1908), and \$7,459,992 deposited as a reserve against postal-savings deposits.

³ Includes money held by the Cuban agency of the Federal Reserve Bank of Atlanta.

⁴ Population of continental United States (estimated) June 30, 1929, 119,788,000; June 30, 1928, 118,364,000; Oct. 31, 1920, 107,491,000; June 30, 1914, 99,027,000; Jan. 1, 1879, 48,231,000.

⁵ Includes United States paper currency in circulation in foreign countries and the amount held by the Cuban agency of the Federal Reserve Bank of Atlanta.

⁶ Revised.

⁷ Does not include gold bullion or foreign coin other than that held by the Treasury, Federal reserve banks, and Federal reserve agents. Gold held by Federal reserve banks under earmark for foreign account is excluded, and gold held abroad for Federal reserve banks is included.

⁸ These amounts are not included in the total since the money held in trust against gold and silver certificates and Treasury notes of 1890 is included under gold coin and bullion and standard silver dollars, respectively.

NOTE.—Gold certificates are secured dollar for dollar by gold held in the Treasury for their redemption; silver certificates are secured dollar for dollar by standard silver dollars held in the Treasury for their redemption; United States notes are secured by a gold reserve of \$156,039,088 held in the Treasury. This reserve fund may also be used for the redemption of Treasury notes of 1890, which are also secured dollar for dollar by standard silver dollars held in the Treasury. Federal reserve notes are obligations of the United States and a first lien on all the assets of the issuing Federal reserve bank. Federal reserve notes are secured by the deposit with Federal reserve agents of a like amount of gold or of gold and such dis-counted or purchased paper as is eligible under the terms of the Federal reserve act. Federal reserve banks must maintain a gold reserve of at least 40 per cent, including the gold redemption fund which must be deposited with the United States Treasurer, against Federal reserve notes in actual circulation. Lawful money has been deposited with the Treasurer of the United States for retirement of all outstanding Federal reserve bank notes. National-bank notes are secured by United States bonds except where lawful money has been deposited with the Treasurer of the United States for their retirement. A 5 per cent fund is also maintained in lawful money with the Treasurer of the United States for the redemption of national-bank notes secured by Government bonds.

Estimated monetary stock of gold and silver in the United States and the amount per capita at the close of each fiscal year since 1873

¹ The amount of money held in trust against gold and silver certificates and Treasury notes of 1890 should be deducted from this total before combining it with total money outside of the Treasury to arrive at the stock of money in the United States.

² This total includes \$16,404,494 of notes in process of redemption, \$173,759,547 of gold deposited for redemption of Federal reserve notes, \$10,263,017 deposited for redemption of national-bank notes, \$2,430 deposited for retirement of additional circulation (act of May 30, 1908), and \$7,529,886 deposited as a reserve against postal savings deposits.

³ Includes money held by the Cuban agency of the Federal Reserve Bank of Atlanta.

⁴ Population of continental United States (estimated) Dec. 31, 1928, 119,076,000; Dec. 31, 1927, 117,653,000; Oct. 31, 1920, 107,491,000; June 30, 1914, 99,027,000; Jan. 1, 1879, 48,231,000.

⁵ Includes United States paper currency in circulation in foreign countries and the amount held by the Cuban agency of the Federal Reserve Bank of Atlanta.

⁶ Does not include gold bullion or foreign coin other than that held by the Treasury, Federal reserve banks, and Federal reserve agents. Gold held by Federal reserve banks under earmark for foreign account is excluded, and gold held abroad for Federal reserve banks is included.

⁷ These amounts are not included in the total, since the money held in trust against gold and silver certificates and Treasury notes of 1890 is included under gold coin and bullion and standard silver dollars, respectively.

NOTE.—Gold certificates are secured dollar for dollar by gold held in the Treasury for their redemption; silver certificates are secured dollar for dollar by standard silver dollars held in the Treasury for their redemption; United States notes are secured by a gold reserve of \$156,039,088 held in the Treasury. This reserve fund may also be used for the redemption of Treasury notes of 1890, which are also secured dollar for dollar by standard silver dollars held in the Treasury. Federal reserve notes are obligations of the United States and a first lien on all the assets of the issuing Federal reserve bank. Federal reserve notes are secured by the deposit with Federal reserve agents of a like amount of gold or of gold and such discounts must maintain a gold reserve of at least 40 per cent, including the gold redemption fund, which must be deposited with the United States Treasurer, against Federal reserve notes in actual circulation. Lawful reserve bank notes. National-bank notes are secured by United States bonds except where lawful money has been deposited with the Treasurer of the United States for their retirement. A 5 per cent fund is also notes secured by Government bonds.

NOTE.—The quantities in the column "Net imports" for both gold and silver for the years 1873-74 to 1886-87 are estimated only, deducted from the declared values of the trade for those years by the following process:

For gold, the rupee value of the monthly net imports was converted into sterling at the average rate of exchange in each month, and this sterling value was then divided by the English mint price of gold (£3 17s. 10½d.). For silver the average price of 107 rupees per 100 tolas, or 235.33 rupees per 100 ounces, was taken as the basis of the value of the annual imports.

1928				

¹ Not available.² Held by the Receiver General of the Dominion of Canada.**THE COURSE OF GOLD AND SILVER**

The following review of the London market during the calendar year 1928 is from the annual circular issued by Messrs. Sharps & Wilkins, bullion brokers, of London, England:

GOLD

In reviewing the market during 1928, the various movements of gold which have directly affected the reserves of the metal held by our central institution against the issue of notes are naturally of chief general interest. The persistence of the practice of not disclosing in the published daily statements either the source from which bar gold is received by the Bank of England, or the destination of amounts withdrawn from that quarter, together with the frequent appearance in the open market throughout the year of "unknown buyers," have rendered it extremely difficult to follow correctly the origin of the various movements which have taken place. It was known that several of the European central banks were anxious to take any opportunity which might occur to increase their stocks of gold and a good deal of speculation has arisen from time to time as to the direction from which certain purchases have emanated. In addition, the practice sometimes employed of merely "earmarking" gold and retaining it in this country, often for considerable periods, has not helped to

make the position any less obscure. The ultimate destination of such purchases may be revealed by the board of trade returns, or, the temporary measure which prompted the purchase having ceased to operate, the gold may be merely "released," and automatically find its way back into the country's reserves, or actually offered for sale in the open market, which on certain occasions has resulted in the appearance of an "unknown seller" as well as buyer. The decision of the central institution to discontinue furnishing any details as to the origin of the movements of sovereigns in future will certainly not tend to lessen the difficulties which already exist in following correctly the movements of gold.

For the purpose of reviewing the gold market, the past year can be divided into the following periods: (1) January to the middle of September and (2) from thence to the close of the year.

During the whole of the first period there was a steady accretion to the reserves of the central institution, the position being entirely reversed during the second period, when heavy withdrawals of the metal on both continental and American account completely nullified the advantage previously gained.

(1) *January to the middle of September.*—At the end of 1927 the published daily statements showed that the reserves of gold had been depleted to the extent of £6,539,000 since the return to a gold standard became effective in April, 1925, as the result of the various operations which had taken place during that period. From the commencement of 1928 there was a steady improvement in the position, and by the end of April the above efflux had entirely disappeared. The following four and one-half months witnessed a more or less continuous expansion in the country's reserves, and by the 13th of June the weekly returns of the central institution showed a reserve of gold against notes of £165,712,560, which represented the highest figure previously recorded. From this point the process of accumulation continued and on the 12th of September a further record was established with the reserves standing at £173,907,475, showing a net influx of £20,001,160 since April, 1925. When compared with the daily statements issued, the weekly returns of the central institution show an excess of approximately £6,000,000, which is probably explained by the amount of coins returned from circulation which are not reported in the bulletins dealing with the daily movements of the metal. This item is of interest as showing that large quantities of gold coins are still being hoarded in the country.

Although purchases of gold in the open market were constantly being effected for destinations which are not disclosed, the amounts actually withdrawn from the Bank of England only amounted to approximately £1,000,000 in the first six months of the year, and only slightly exceeded £5,000,000 during the whole of the above period under review. In spite of continuous competition from outside sources, the central institution succeeded in securing about 50 per cent of the total of bar gold received from South and West Africa up to 17th of July, but from this point to the end of the year no further purchases were made from this source.

The following were the chief additional supplies received during this period, the figures given being merely approximate:

Russia, £3,500,000; United States of America, £6,500,000; Australia, £1,000,000 (sovereigns); Canada, £979,000 (sovereigns); South Africa, £6,000,000 (sovereigns); as well as £1,000,000 bar gold of undisclosed origin and the release of a similar amount of sovereigns which had been "set aside" at the end of 1927 for account of Switzerland.

The receipts from Russia consisted of approximately £1,000,000 in January and of further similar amounts in April and July. During the latter month a touch of romance was imparted to the otherwise prosaic movements of gold which were taking place at that time, when a shipment of £1,000,000 from Russia to New York was refused by the United States Treasury Department. At the same time the Bank of France laid claim to the gold, with the result that a reshipment was arranged to Germany. In order to obviate the possibility of any further legal complications taking place, the gold was actually transhipped at sea off Falmouth from S. S. *Dresden* to S. S. *Reiher*, an undertaking of a somewhat risky nature, one would imagine, with so valuable a cargo, and taken straight to its destination.

In spite of the strength of the sterling rate on New York, during the latter part of May and throughout the following month, it was doubted whether the shipments of gold from this quarter, amounting to approximately £6,500,000, could have shown a profitable return when calculated on a purely exchange basis, and it was more or less generally thought that these transactions were of a special nature, possibly carried out with the intentions of producing an expansion of credit by increasing the landing power of the clearing banks of London. The receipt of £3,000,000 in one line by the Bank of England on the 7th of June, re-

presenting the arrival from New York per *S. S. Aquitania*, constituted the largest movement of gold on any one day since April, 1925.

The receipt of £1,000,000 (sovereigns) from Australia took place in the early part of September. Before the war it was no uncommon thing for shipments of sovereigns to be made to London from that quarter, but this practice has been discontinued in recent years, so that the above represents the first important receipt for some time.

Of the receipt from Canada of £979,000 (sovereigns), £750,000 arrived in January and the balance in June.

The receipt of £6,000,000 (sovereigns) from South Africa, the greater part of which arrived in London during July, August, and September, was rendered possible by the cessation of the heavy withdrawals from that quarter to the Argentine and Brazil, which had taken place earlier in the year. These sovereigns were paid straight into the Bank of England, and not only acted as an important counter to the withdrawals of gold on continental account, which commenced to be made at that time, but represented practically the only important source of accretion to the reserves.

The purchase by the Bank of England in June of approximately £1,000,000 gold from an unknown source, was generally believed to be merely the resale of an amount previously purchased for an undisclosed destination and retained in this country as a temporary measure.

The only exports of gold from this country of any importance during this period, other than the usual weekly shipments to India and the Continent, consisted of approximately £18,500,000 to France and £3,500,000 to Germany, £1,700,000 to Switzerland, £1,000,000 to the Netherlands and £715,000 to Rumania. Almost the entire amount exported to France took place during February and March, and coincided with heavy withdrawals of the metal from America for the same destination, and were probably prompted by the desire on the part of the Bank of France to concentrate her holdings of gold in foreign countries, in view of the possibility of the stabilization of the franc becoming effective in the near future. Although it was suspected that certain purchases had taken place in the open market for this quarter during the early part of the year, the amounts exported from London were largely withdrawn from the stocks of gold held here by the Bank of France, and consequently did not produce any direct effect upon the reserves of our central institution.

The shipments to Germany began in the latter half of July, and while purchases for this quarter were effected in the open market, rather more than half the amount exported at that time was actually withdrawn from the Bank of England.

The shipment of £715,000 gold to Rumania was not the result of purchasing gold in London, but merely the return of a similar amount sent to London last year for reminting purposes.

(2) *Middle of September to 31st of December.*—As a result of movements adverse to sterling in certain foreign exchanges, the second period of the year was characterized by heavy withdrawals of gold from London, and not only was there keen outside competition for all supplies available in the open market, but large purchases were also made from the Bank of England, which became especially pronounced with the approach of the end of the year. In addition to the customary autumnal flow of gold to America, certain European central institutions availed themselves of the opportunity of increasing their stocks of gold, with the result that in six weeks the reserves of this country had been reduced by some £10,000,000 and, by the end of the year, not only had the entire advantage gained during the first nine months been completely wiped out, but an actual loss incurred on the year of £1,321,956. The position as shown by the published daily statements represents a net efflux of £7,860,956 since the return to a gold standard.

During the whole of this period under review the only appreciable receipt of gold by our central institution consisted of £2,000,000 in sovereigns from Spain, which was shipped to London, as an attempt to check the adverse trend in the peseta. These sovereigns formed part of the accumulation created during the last two years by the insistence of the Spanish authorities that all customs duties should be paid on a gold basis, and in the event of certain movements in exchange, importers found it more profitable to settle their commitments by shipping sovereigns.

With regard to the important exports of gold at this time, the shipments to America of about £6,500,000 almost exactly corresponded to the amounts received from that quarter earlier in the year and were only slightly in excess of the exports during the previous year.

The demand for Germany which commenced in July as the result of short and long term borrowing and the resales of foreign currency by the Reichsbank continued, with slight temporary checks, throughout the greater part of the remainder of the year, and approximately £16,500,000 was either secured in the open market or withdrawn from the Bank of England for this quarter during the period under review. This amount, together with the £3,500,000 previously referred to, constitutes a total export of about £20,000,000 for the year, exclusive of the usual trade requirements.

In addition to the purchases of gold in London £1,000,000 was secured by the Reichsbank from Russia.

Purchases of gold for destinations undisclosed at the time continued to be made in the open market and were believed to be chiefly for the following accounts: Austrian Central Bank, National Bank of Belgium, Bank of Poland, Hungarian National Bank, Swedish Riksbank.

Toward the end of the year France joined in what might almost be termed the gold scramble in London, and succeeded in securing the bulk of the last three shipments from South Africa before actual arrival in this country. These transactions in "forward gold" are in direct opposition to the customary practice of only dealing with the weekly imports from the Cape in the open market on arrival. In view of the fact that France has been "earmarking" gold in New York for some time, it seems difficult to understand why she should turn her attention to London, whence the heavy withdrawals of the metal had already made important inroads into the reserves of our central institution.

The only other two items of any special interest are the shipment of £1,000,000 (sovereigns) to Canada and the "earmarking" on the 27th of December of a similar amount for an undisclosed account. It was thought that this purchase, coinciding with the demand from France, might also be for this quarter, but it seems quite probable that the Swiss National Bank was merely repeating a similar transaction carried through at the end of 1927.

The practice of "setting aside" and "releasing" sovereigns on account of the South African Reserve Bank has continued from time to time during the past year.

The arrivals of refined and unrefined gold from South and West Africa have amounted to £24,861,983, which represents a reduction on the previous year of £971,148, for which the shipments to the Argentine and Brazil during the early part of the year are no doubt responsible.

* * * * *

Shipments of gold bullion and gold coin from South Africa to India during 1928 are: Gold bullion, £4,294,527; gold coin, £5,439,500. Compared with 1927 the above figures show increases of £354,827 in bullion and £2,111,000 in coin.

During the first half of the year the selling price for bar gold for shipment from Durban direct varied between 84s. 7½d. and 84s. 10½d. per ounce fine, due to the possibility of competition from New York in consequence of the movements in the sterling rate which took place during that period.

Sovereigns have been dealt in at one-fourth to one-eighth per cent discount throughout the year.

In addition, the following shipments of gold coin took place from South Africa: To Singapore, £420,100; to Colombo, £552,000; to Buenos Aires, £1,600,000; to Rio de Janeiro, £3,224,700; to Java, £391,620; to Port Sudan, £50,000.

The above figures show an increase of £4,571,830 when compared with similar shipments during 1927.

From the above figures it will be seen that during 1928 India has absorbed £9,734,027 gold from South Africa and £2,192,929 from this country, making a total of £11,926,956, which represents an increase of approximately £2,000,000 when compared with 1927.

SILVER

In a market possessing far less points of interest than in recent years, the outstanding feature is undoubtedly to be found in the remarkable resistance to the weight of production shown throughout the period under review, for which the almost insatiable power of absorption of the metal on the part of China has been primarily responsible. In our report on the market in 1927 we expressed the opinion that there would be little difficulty in disposing of the world's production of silver at about the level then ruling, which has been justified by subsequent events, the average price for 1928 standing at about ¾d. higher than that for the previous year.

The demonstration of silver coins by the Indian and Continental Governments has continued to an increased extent, which, together with about 6,000,000 ounces of surplus silver disposed of by the British mint, has added approximately 40,000,000 ounces to the available supplies when compared with 1927. In view of the improvement in the price of silver and the rise in the value of certain metals of which silver is a by-product, there seems no particular reason to suppose that the actual world's production has shown any decrease during the past year; and with the additional supplies of demonetized coin it is estimated that the entire supplies available from all sources have amounted to approximately 300,000,000 ounces.

With the exception of the purchase of some 6,000,000 ounces for Poland, no important coinage orders have been undertaken during the year. In addition, certain other demands for silver such as the Manufacture of Maria Theresa dollars by the Vienna Mint for export to Arabia and the Persian Gulf, which in 1927 played their part to a varying extent in the absorption of the available supplies, have, for various reasons, ceased to operate during this year.

Producers have therefore been dependent upon the Eastern markets as the chief outlet for their silver, and as the consumption of the metal by India from all sources has not shown any material alteration during the past year, it has been left to China to absorb over 130,000,000 ounces, which represents approximately 45 per cent of the entire available supplies.

During the year under review the variations in the cash price have been between $26\frac{1}{16}$ d. per ounce standard and $28\frac{7}{8}$ d. per ounce standard, the former being quoted on the 19th, 24th, and 26th of January, 6th of February and 17th of September, and the latter on the 24th of May, although actually the lowest quotation registered was $25\frac{15}{16}$ d. per ounce standard, the rate for forward delivery on the 19th, 24th, and 26th of January and 1st of February. The range in the cash price has therefore been $2\frac{13}{16}$ d. per ounce standard, as against $3\frac{1}{4}$ d. per ounce standard in 1927, and it is interesting to note that for slightly more than eight months rates have ruled between $26\frac{1}{16}$ d. per ounce standard and 27d. per ounce standard; in fact, the unusually protracted periods during which the price remained settled at a certain level form one of the characteristics of the past year.

At the end of 1927 the quotations were $26\frac{1}{2}$ d. per ounce standard and $26\frac{7}{16}$ d. per ounce standard for cash and forward deliveries, respectively. After a slight temporary improvement to $26\frac{11}{16}$ d. per ounce standard, due chiefly to a demand from Calcutta, the price relapsed to the level of about $26\frac{1}{2}$ d. per ounce standard, at which it stood until toward the end of April. Throughout the whole of this period the market remained extremely quiet with no special feature to report. From this point rather more activity was shown and a gradual improvement took place to $26\frac{15}{16}$ d. per ounce standard, the quotation on the 30th of April. With slight checks the upward movement continued until $28\frac{7}{8}$ d. per ounce standard was reached on the 24th of May. This proved to be the highest price, not only of the year, but also since August, 1926. This sudden change in the existing condition of the market was due partly to a recrudescence of militarist activity in China, and partly to certain unfavorable developments in the Chinese-Japanese political situation. As the result, and in anticipation of, the possibility of the position becoming still more aggravated, Chinese merchants were induced to withdraw funds invested in Japan and large purchases of silver were effected by the Japanese banks to deal with the discrediting of notes as the result of the anti-Japanese boycott. Further, heavy sales by Chinese speculators caused a substantial fall in the yen rate.

The change in the situation produced at first a good demand from India which was stimulated by the creation of a corner in Bombay for the May settlement, but later improvements in price were entirely due to buying for forward delivery by China; India and America, which had previously been influenced by the strength of China to make large forward purchases, availed themselves of the higher prices ruling to make forward sales.

Advantage was taken by the Indian Government of the improved condition of the market at the end of April to realize further amounts of their holding of surplus rupees, and the fact that no weakening effect was produced by these sales is evidence of the strength of the market at that time and the predominating influence of the Chinese situation upon speculators. It has been more or less generally felt that the probability of further sales of silver by the Indian Government constituted one of the chief points of weakness in the future of silver, and there is no doubt that this probability has very greatly influenced the Indian markets for a long time and has been a check to that speculative element which has always characterized the Bombay and Calcutta markets in past

years. It is interesting to note that an improvement in price of approximately 2d. followed the announcement of the resumption of sales from this quarter, showing that China, far from being deterred by this fresh source of supply, was perfectly ready to continue the absorption of this additional amount. Shipments of rupees began to be made to London from both Bombay and Calcutta, about 6,000,000 ounces being exported in May, and further amounts in the following months to a total of about 22,000,000 ounces. In addition, 3,500,000 ounces were shipped direct to China.

As the result of the relaxation of the political tension already referred to and the cessation of hostilities in China, the demand from that quarter, which had been so pronounced recently, ceased, and with speculators in Shanghai covering up their oversold position in sterling, the bull position which had been created in London began to be reduced, with the result that a reaction took place from the higher level previously reached. After some comparatively violent fluctuations due chiefly to bears taking advantage of any fall in rates to cover their sales and any upward movement inducing fresh realizations by the bulls, the rate settled at the level of about 27½d. per ounce standard, at which it remained until toward the end of August.

The lower rates quoted induced an improved and more consistent demand from both India and China, but this was largely offset by important sales of silver on Continental account which commenced to be made at the beginning of July. As the result of certain proposals embodied in the general plan for the stabilization of the franc, which took place in June, the existing silver coins became demonetized, with the results that the French peasants all over the country rushed to avail themselves of the offer made by the Bank of France, to exchange one old 5-franc piece for 10 new franc notes. The hoarding propensity of the French nation as a whole has long been realized, and it is not surprising that enormous quantities of coins were exchanged in this manner. Some of these coins dated back even so far as the period of Louis XVIII. The result was that provincial branches of the treasury experienced great difficulty in coping with the situation thus created. In addition, large numbers of 5-franc pieces augmented by those of smaller denominations which were not accepted by the Bank of France were realized for their intrinsic value and found their way into the melting pots of the French refining houses. The bulk of the resultant fine silver was disposed of on the London market and created an important source of supply of metal throughout the remainder of the year. On the basis of the London price of 27½d. per ounce standard, ruling at the commencement of these operations, the intrinsic value of a 5-franc piece after deduction of the necessary expenses of refining and transport, represented an advantage of roughly 5 per cent, when compared with the exchange into notes on the basis referred to above.

Owing to the vast quantities of coins received by the refineries in Paris, it was found necessary to invoke the aid of refining houses in both Germany and London to deal with the position, with the result that part of the 15,000,000 ounces imported into London and of the 1,700,000 ounces into Germany was actually in coin form. In addition, certain lots of these coins found their way into other countries even as far afield as Persia.

At the end of August a further period of weakness set in and by the middle of September the lowest price of the year, 26½d. per ounce standard, was again quoted. In spite of important shipments of silver to both India and China and the more or less continuous purchasing of forward silver by the latter during this period, there was a tendency on the part of India to make bear sales, with the result that it was impossible to absorb the supplies from the Continent and elsewhere except at reduced rates. The lower level reached induced bear covering and stimulated the demand from India for shipment and with China continuing to buy, a recovery in price took place to 27d. per ounce standard in the early part of October, the rate settling at slightly below this level throughout the remainder of the month and November, to be followed in December by a further setback to the level of 26½d. per ounce standard, at which it remained until the end of this year.

The flood of silver from the Continent produced a big increase in the London stocks which continued heavy throughout this period in spite of important shipments to the East, with the result that the cash quotation was quoted almost continuously at a discount. The demand from India for shipment constituted the chief support, as although China was a consistent buyer in America, dealings both ways took place in London. Resales of silver previously purchased on account of Indo-China were effected at this time and were largely responsible for the further setback in price which occurred during the last month of the year.

Previously, in the early part of December, the purchase of slightly over 6,000,000 ounces referred to was effected by the Polish Government. The greater part of this silver was secured from demonetized coins in Belgium and the balance from stocks in this country.

Although America, as a producing country, has sold silver on the London market during the year, some of the principal New York dealers, encouraged by the substantial sales to London from continental sources, have from time to time made very important purchases here for forward delivery. Most of these transactions were in the nature of a hedge against operations in yen or in consequence of the continued China buying, and the greater part of these purchases, when contracts fell due, was shipped to Shanghai.

Stocks of silver in Shanghai at the end of December, 1928, amounted to 62,000,000 taels of sycee, 102,000,000 dollars and 5,740 bars of silver, as compared with 48,500,000 taels of sycee, 80,800,000 dollars, and 1,460 bars of silver at the end of 1927.

It is understood that the French Government has decided to issue in the course of the present year one hundred million 10-franc silver pieces, but that sufficient silver is held by the Bank of France to meet the requirements of the mint.

During the year the cash price has ruled at a premium over that for forward delivery on 136 days and at a discount on 130 days. The highest premium was $\frac{3}{4}$ d. per ounce standard, quoted in the early part of June, and the largest discount $\frac{3}{16}$ d. per ounce standard on certain occasions in August, September, and December. From the middle of August to the close of the year, with the exception of two days, a discount in the cash quotation has ruled throughout.

An important factor which must not be overlooked is the increasing demand for silver for industrial purposes. This, without doubt, is due to the enormous expansion of the film industry all over the world. The consumption in 1928 in the United States and Canada alone amounted to 33,000,000 ounces, of which the films accounted for one-third.

The trend of silver during 1929 presents a more than usually difficult problem. Sales of surplus rupees will no doubt continue, but the amount, we think, will depend on circumstances, as we take it for granted that the Indian Government will not force sales on an unwilling market. Offerings from the Continent are not expected to equal those of last year. With a more settled position in China, business should be stimulated there, but a peaceful China has many needs beyond silver and the imports of the metal may not reach the figures of 1928. This is the crucial point. If China's power of absorption in 1929 approaches that of last year, silver should be maintained at, or slightly above, present rates. We are inclined to think the demand from China will slacken, but while we hesitate to predict any rise of importance, we do not expect the average of 1929 to fall much below 26d.

(NOTE.—British import and export figures may be found elsewhere in this volume.)

NOTE.—From 1687 to 1832 the ratios are taken from Dr. A. Soetbeer, from 1833 to 1878 from Pixley and Abell's tables, from 1879 to 1896 from daily cabled prices from London to the Bureau of the Mint, and since from daily London quotations.

Ratio of Silver to Gold, as Affected by World War

During the period December, 1916, to June, 1920, it is probable that the world's basic silver price was that of New York rather than that of London. The normal relationship between the two prices—New York a fraction of a cent below the London quotation with exchange considered—did not prevail during this period, when the average monthly New York price varied between approximately 3 cents above and 6 cents below the London price. This period appears to have been initiated by enormous coinages to meet war-time needs, and large silver shipments from the United States to the Orient. Its close was coincident with the removal of the product of United States mines from the world market, purchases under the Pittman Act of April 23, 1918, having begun in June, 1920.

The ratio of silver to gold, based on the New York price, was for this period: Calendar year 1917, 24.85; 1918, 21; 1919, 18.44; 1920, 20.27.

With the partial release during the first half of 1919 of British governmental control of gold export, the London price of exportable gold advanced above its monetary par. The ratio of silver to this

gold, based on the average London price of both metals, follows: 1919, 17.53; 1920, 20.41; 1921, 32.34; 1922, 30.11; 1923, 31.35; 1924, 30.62.

Final release of British governmental control of gold export became effective April 28, 1925, when the Chancellor of the Exchequer of Great Britain announced that the restrictions authorized by the gold and silver (export control) act of 1920 on export of gold would be discontinued from that date. This had the effect of restoring the gold standard to the United Kingdom. The example of Great Britain was followed by Australia, New Zealand, Netherlands, and the Dutch East Indies, and on June 1 by South Africa. On April 29, 1925, the London quotation on gold dropped more than 1 shilling to 84s. 11d. per fine ounce, as compared with 84s. 11.45d., mint par. Thereafter the quotation fluctuated between 84s. 10½d. and 84s. 11½d. until January 29, 1926, when it touched 84s. 9¾d.; it has since varied between the latter figure and 84s. 11½d.

Values of foreign coins, October 1, 1929¹

In pursuance of the provisions of section 25 of the act of August 27, 1894, as amended by section 403, Title IV, of the act of May 27, 1921, and reenacted by section 522, Title IV, act of September 21, 1922, I hereby proclaim the following estimates by the Director of the Mint of the values of pure metal contents of foreign coins to be the values of such coins in terms of the money of account of the United States, to be followed in estimating the value of all foreign merchandise exported to the United States during the quarter beginning October 1, 1929, expressed in any such metallic currencies: *Provided, however,* That if no such value has been proclaimed, or if the value so proclaimed varies by 5 per cent or more from a value measured by the buying rate in the New York market at noon on the day of exportation, conversion shall be made at a value measured by such buying rate, as determined by the Federal Reserve Bank of New York and published by me as certified by said bank pursuant to the provisions of said section 25 as amended.

ANDREW W. MELLON,
Secretary of the Treasury.

¹ Department circular No. 1 (published quarterly).

Values of foreign coins

Country	Legal standard	Monetary unit	Value in terms of United States money	Remarks	
Argentine Republic	Gold	Peso	\$0.9648	Currency: Paper normally convertible at 44 per cent of face value.	
Austria	Gold	Schilling	.1407		
Belgium	Gold	Belga	.1390	1 belga equals 5 Belgian paper francs.	
Bolivia	Gold	Boliviano	.3650	Law of July 11, 1928. 13½ bolivianos equal 1 pound sterling.	
Brazil	Gold	Milreis	.5462	Currency: Government paper convertible at 4.567 paper milreis to the gold milreis (\$0.1196), by decree of May 23, 1928.	
British Colonies in Australasia and Africa.	Gold	Pound sterling	4.8665		
British Honduras	Gold	Dollar	1.0000		
Bulgaria	Gold	Lev	.0072	By law of Nov. 28, 1928.	
Canada	Gold	Dollar	1.0000		
Chile	Gold	Peso	.1217		
China	Silver	Tael	Amoy	.6266	The tael is a unit of weight; not a coin. The customs unit is the Haikwan tael. The values of other taels are based on their relation to the value of the Haikwan tael.

FOREIGN AND WORLD MONETARY STATISTICS

The statistics of foreign countries on production, import, export, and coinage of gold and silver, and stocks of money, published annually in the reports of the Bureau of the Mint, are obtained, so far as practicable, directly from the Governments of such countries by the representatives of the United States accredited to them.

A list of interrogatories covering the points on which information is sought is sent yearly to the United States ambassadors and ministers through the Department of State, and the replies in the form of reports, are forwarded directly to the Bureau of the Mint.

Receipts of replies to the interrogatories are frequently delayed in transmission and the available data for the calendar year under review are usually incomplete.

In the absence of official returns from foreign countries the most reliable data available are used in compiling world statistics. Where data other than from the interrogatory replies are published the source of the information is stated. Conversions of foreign moneys or values into United States equivalents have been made at the legal par rates unless otherwise stated (in the text).

Revised world tables for 1927 and tables for 1928, subject to revision, are printed at the end of this volume. Detailed data, arranged by continents and countries, follow herewith; they form the basis of the tables.

NORTH AMERICA

CANADA

Domestic silver coinage executed in home mints during the year ended December 31, 1928

Denomination	Pieces	Value
25 cents	2,089,539	\$522,385
10 cents	2,451,969	245,197
Total	4,541,508	767,582

The amount of domestic silver coin withdrawn from monetary use for recoinage during 1928 was \$233,024.

The estimated quantity of gold and silver in the form of old jewelry, plate, etc., used in the industrial arts during 1927 was as follows: Gold, \$1,345,805; silver, \$423,166.

The amount of gold and silver in the form of old jewelry, plate, etc., returned from the industrial arts to monetary use during 1928 was as follows: Gold, 14,529 fine ounces, valued at \$300,339; silver, 4,730 fine ounces, valued at \$2,727.

The total imported United States gold coin and bullion melted at the mints during 1928 was as follows: Coin, 48 fine ounces, valued at \$993; bullion, 17 fine ounces, valued at \$350.

*Law of Monetary Reform (July 11, 1928)*CHAPTER I. *Gold coins*

ARTICLE 1. The monetary unit of the Republic of Bolivia shall be the boliviano containing 0.54917 gram of fine gold.

ART. 2. Gold shall be coined into 10 and 20 boliviano pieces. The 10-boliviano coin shall be called a "Boliviar" and the 20-boliviano coin shall be called a "Double Bolivar." The 10-boliviano coin shall weigh 6.10189 grams, $\frac{900}{1000}$ fine, containing 5.4917 grams of fine gold. The 20-boliviano coin shall weigh 12.20378 grams $\frac{900}{1000}$ fine, containing 10.9834 grams of fine gold.

Copper shall be used in the alloy of all gold coins.

ART. 3. The executive power shall determine the diameter and thickness of the gold coins, the design thereof, and the kind of milled edges. All subsequent modifications shall be made by the legislative power.

ART. 4. The tolerance of the gold coins, taken individually or collectively, shall be $\frac{1}{1000}$ for the fineness and the weight. The tolerance for each coin shall be 16 milligrams for the 10-boliviano coin and 32 milligrams for the 20-boliviano coin.

ART. 5. No gold coin shall be struck until after the date officially announced by the executive power.

Gold shall be coined only on Government account and of the Central Bank of the Bolivian Nation. When the national mint will be equipped for the coining of gold, the Central Bank of the Bolivian Nation will buy the gold bars offered to it in weights of no less than 500 grams, paying therefor at the rate of 1,820.94 bolivianos per kilo of pure gold and deducting the cost of refining.¹

ART. 6. The Bolivian gold coins struck in accordance with this law, if they are within the limit of tolerance per coin, shall be received in unlimited amounts in payment of any tax or Government debt and shall be legal tender to an unlimited amount for all classes of public and private debts unless otherwise expressly stipulated by contract.

ART. 7. The English and Peruvian gold coins of the present legal weight and fineness shall be legal tender to an unlimited amount in all classes of public and private debts and in all payments made to the national Government, at its divisions and offices, at the rate of 13.333 bolivianos per English pound sterling or Peruvian pound. The United States gold coins of the present legal weight and fineness shall be legal tender to an unlimited amount in the payment of all classes of public and private debts and in all payments made to the national Government, at its divisions and branches, at the rate of 2.7399 bolivianos per dollar.

ART. 8. The Bolivian gold coins struck in accordance with this law shall be received at par by the Government and by the Central Bank of the Bolivian Nation, as the Government's agent, if the weight has not been reduced within 20 years of the date of coinage by more than $\frac{1}{2}$ of 1 per cent of its legal weight prescribed by this law. If they have been in use for less than 20 years, the loss allowed shall be proportional to the time elapsed. The money of reduced weight thus received shall not be placed again into circulation, but shall be recoined or sold as gold bullion for the account of the Government according to the order of the Ministry of Finance, who will promulgate the necessary regulations for protecting the Government against fraudulent tampering and other illegal practices.

¹ Reformed by the approbatory article, second part.

CHAPTER II. *Silver and nickel coins*

ART. 9. The Bolivian silver coins shall be of the following denominations:

(a) 1-boliviano, having a gross weight of 15 grams, $\frac{800}{1000}$ fine, containing 12 grams of fine silver.

(b) $\frac{1}{2}$ -boliviano, or 50 centavos, having a gross weight of $7\frac{1}{2}$ grams, $\frac{800}{1000}$ fine, containing 6 grams of fine silver.

(c) $\frac{1}{5}$ -boliviano, or 20 centavos, having a gross weight of 3 grams, $\frac{800}{1000}$ fine, containing 2.4 grams of fine silver.

Copper shall be used in the alloy of all silver coins.

ART. 10. The executive power shall determine the diameter and thickness of the silver coins, the design thereof, and the kind of milled edges. All subsequent modifications shall be made by the legislative power.

ART. 11. The limit of the tolerance for the silver coins, taken individually or collectively, shall be $\frac{3}{1000}$ for the fineness and the weight.

The tolerance for each coin shall be $\frac{130}{1000}$ of a gram for the boliviano and 50-centavo coins, and $\frac{100}{1000}$ of a gram for the 20-centavo coin.

ART. 12. The minor coins of Bolivia shall consist of the following denominations:

(a) 10 centavos, with a gross weight of 5 grams.

(b) 5 centavos, with a gross weight of $2\frac{1}{2}$ grams.

The 10 and 5 centavo coins shall be struck from an alloy consisting of 25 per cent nickel and 75 per cent copper.

The minor coins shall not have any milled edges.

The 10-centavo coin shall have a diameter of 25 millimeters and the 5 centavo coin a diameter of 20 millimeters.

ART. 13. The design or type of the minor coins shall be as follows:

On the obverse they shall bear the national escutcheon with the inscription: "Republic of Bolivia," and on the reverse shall be given the denomination of the coin in numbers and with all its letters and the year of coinage.

ART. 14. The silver coins struck in accordance with this law shall be legal tender in all kinds of private obligations up to 10 bolivianos for a single payment; the minor coins struck in accordance with this law shall be legal tender up to 1 boliviano for a single payment.

All the silver and minor coins struck in accordance with this law shall be legal tender to an unlimited amount in payments of all kinds of debts to the Government and its dependencies and institutions, including the post office and the Central Bank of the Bolivian Nation in its operations as Government agent.

ART. 15. All the silver and minor Bolivian coins issued in accordance with prior laws shall be legal coins and consequently legal tender at their face value under the same conditions as the coins issued by virtue of this law.

ART. 16. In accordance with the rules which will be issued by the Ministry of Finance in order to protect the Treasury against fraudulent reductions and other similar practices, the Central Bank of the Bolivian Nation, as agent of the Government, shall accept silver and minor coins worn by natural use, with obliterated designs and dates, and shall exchange them at par for new coins.

The coins which have been clipped, perforated, reduced, or mutilated in any other manner shall lose their character as legal money and their acceptability in payments made to the Government.

ART. 17. The Government, through the Minister of Finance, shall meet without delay the demands of the Central Bank for the issue of silver and minor coins against the delivery at La Paz of legal gold coins and notes of the bank convertible at par.

CHAPTER III. *Various provisions*

ART. 18. Are abolished all taxes, prohibitions, and restrictions against the import and export of gold coin and bullion, and against the export of silver coins.

ART. 19. Are repealed all laws and parts thereof which are at variance with the present law.

ART. 20. This law shall enter into force on the day of its promulgation in so far as it refers to the coinage of silver. All the other provisions shall enter into force 30 days after the promulgation of the law for the reorganization of the Bank of the Bolivian Nation into the Central Bank of the Bolivian Nation.

Approbatory article

Sole article. Is declared as law of the Republic, in its 20 articles, the bill sent by the executive power on monetary reform on the 4th day of the present month with the sole modification of the second part of article 5, which shall read as follows:

"Gold shall be coined for the account of the Government only and of the Central Bank of the Bolivian Nation. The national mint at Potosi is equipped for the coinage of gold, and the Central Bank of the Bolivian Nation shall buy the gold bars presented to it in quantities of no less than 500 grams, paying therefor at the rate of 1,820.94 bolivianos per kilo of pure gold and deducting the cost of refining."
(Promulgated as law July 11, 1928.)

Reorganization of the Bank of the Bolivian Nation

[Extracts from law of July 20, 1928]

CHAPTER VII. *Issue of notes*

ART. 59. There shall be granted to the Central Bank of the Bolivian Nation the exclusive right to issue notes during its 50 years of existence, and during said period neither the national Government nor any of its political subdivisions nor any other bank or corporation, enterprise, individual, nor any other entity shall issue paper money or any documents whatsoever that may circulate as money in Bolivia. This concession shall be subject to the rights granted to other banks of the Republic by article 20 of the law of November 23, 1914, which article is incorporated in the present law.

ART. 60. The notes of the Central Bank of the Bolivian Nation shall be issued in terms of gold bolivianos.

ART. 61. The boliviano shall contain 0.54917 grams of fine gold, that is, the exact equivalent of 18 pence British gold coin of the present standard weight and fineness.

ART. 62. The notes of the Central Bank of the Bolivian Nation shall be of the following types and denominations: 5, 10, 20, 50, 100, 500, and 1,000 bolivianos. The bank shall exchange, free of charge, for the public, same denominations for others at par and on demand, without any commission, at its headquarters and all its branches.

ART. 63. The notes of the Central Bank of the Bolivian Nation shall be accepted at par, without any limit as to amount, in payment of all taxes and any public contributions and services. They shall have unlimited legal tender quality for the payment of any public and private debt, with the exception of the cases where payment in other currency is expressly stipulated. The obligations of the Central Bank of the Bolivian Nation, represented by said notes, shall be paid in accordance with article 64 of this law.

ART. 64. The notes of the Central Bank of the Bolivian Nation shall be payable to the bearer at sight during the hours set by the bank, and the payment shall be made in any of the following shapes, at the option of the bank: (a) In Bolivian gold coin of the present weight and fineness, at the rate of 13.33 bolivianos to the pound, and in United States gold coin of the present weight and fineness, at the rate of 2.739 bolivianos to the dollar; (b) in gold bars approximately 100 per cent fine, weighing not less than 500 grams, at the rate of 1.8211 bolivianos per gram of fine gold; (c) in sight drafts or 3-day drafts on London or New York, payable in gold and drawn on funds deposited with first-class banks located in said cities. The bank may charge for such drafts a premium above the parity of the gold boliviano with the pound sterling and the United States dollar, respectively, which premium shall not exceed the amount required for covering the expense of transporting gold coin in large amounts from La Paz to London or New York, as the case may be. The maximum premium shall be determined by the board of directors of the bank, with the vote of six members at least and the approval of the Minister of Finance, and shall be published.

ART. 65. In addition to the cashing of notes required by article 64, the bank shall exchange its notes, at its headquarters as well as all its branches, at par and on demand, in amounts of 10 bolivianos or multiples thereof, for Bolivian silver and nickel coins.

ART. 66. In order to prevent the increase in the value of the boliviano over the gold value given thereto in article 61 of this law and in the monetary law, of 0.54917 grams of fine gold, the Central Bank of the Bolivian Nation shall

deliver its own notes at sight in its main office at La Paz in exchange of: (a) Bolivian gold coin at par, British and Peruvian gold coin of the present weight and fineness at the rate of 13.33 bolivianos to the pound, and United States gold coin of the present weight and fineness at the rate of 2.739 bolivianos to the dollar; (b) deposits credited to the Central Bank of the Bolivian Nation, payable at sight in gold at the rate of 13.33 bolivianos to the pound sterling of the present weight and fineness in London and at the rate of 2.739 bolivianos to the dollar in New York, if said deposits represent the amounts not less than £30 or \$150, as the case may be, available in London or New York banks where the Central Bank of the Bolivian Nation keeps its deposit account of legal specie. For this delivery of notes in Bolivia against gold deposits abroad the bank may charge a premium above the gold parity of the boliviano with the pound and dollar, respectively, which premium shall not exceed the amount required for defraying all the expenses of transporting gold coin in large amounts from London or New York to La Paz. The maximum premium shall be determined by the board of directors of the bank with the vote of at least six members and the approval of the Minister of Finance, and shall be published.

ART. 67. Should the bank fail to exchange its notes at sight in the manner prescribed by articles 64 and 65 of this law, its notes will become cancelable to any amount and the bank shall be declared "bankrupt owing to suspension of payment in gold," and its immediate liquidation shall be undertaken by the supervisor of banks in accordance with the law.

ART. 68. The notes of the Central Bank of the Bolivian Nation shall have the privilege of being paid in preference to all other outstanding claims of the bank.

ART. 69. The Central Bank of the Bolivian Nation shall not be under obligation to reimburse completely destroyed notes. It shall pay at sight and at par notes in good condition for torn or deteriorated notes where the latter bear two signatures (of the guarantor and accountant) and two numbers. It shall pay half the face value where they bear one signature and one number. The notes bearing no signature and no number shall be worthless and the bearer shall not be entitled to any payment whatsoever.

The Central Bank of the Bolivian Nation shall not pay to the public for any notes issued by the old banks of issue, but it shall present at once to the respective bank of issue, for redemption, any notes of said bank which are actually in its possession or in the possession of any of its branches, or which will be received in future.

ART. 70. In case the bank is liquidated at any time, the profits ultimately derived from the loss and destruction of its notes shall accrue to the national Government.

CHAPTER VIII. *Metallic reserve*

ART. 71. The Central Bank of the Bolivian Nation shall keep a normal minimum legal metallic reserve equal to 50 per cent of its deposits combined with its note circulation, that is, of the amount of its notes not in its possession.

ART. 72. The above-mentioned normal minimum legal reserve shall consist of: (1) Bolivian gold coin at par; British, Peruvian, and United States gold coin computed at legal gold parity with the boliviano; other gold coin and gold bars in the vaults of the bank, computed on the basis of their fine gold content. (2) Gold coin and bullion deposited in high-class banks in London or New York, computed as prescribed in paragraph 1. (3) Deposits payable in gold at sight or in three days in high-class banks in London or New York, computed at the legal gold parity with the boliviano. (4) Bolivian silver coin in the vaults of the bank.

The metallic reserve may be distributed among the above-mentioned items in a proportion deemed suitable by the board of directors, on condition that the silver coin item does not exceed at any time 10 per cent of the combined amount of notes in circulation and of deposits.

ART. 73. When the metallic reserve of the bank, constituted in accordance with article 72 of this law, is below the normal legal minimum of 50 per cent, the bank is liable to the following fines, payable to the Government, and imposed by the supervisor of banks: If the reserve is below 50 per cent but not below 45 per cent, the fine will be 2½ per cent a year on the deficit; if below 45 per cent but not below 40 per cent, the fine will be 5 per cent a year on the deficit; if below 40 per cent but not below 35 per cent, the fine will be 15 per cent a year on the total deficit plus an additional fine of 1½ per cent a year for each per cent or fraction of 1 per cent if the reserve drops below 35 per cent.

ART. 74. The discount rate of the Central Bank of the Bolivian Nation can not be less than 7 per cent a year when the reserve of the bank has been for a week or longer below the normal legal minimum of 50 per cent of the combined amount of bank notes in circulation and of its deposits.

ART. 75. When it happens that the bank must pay a fine because of insufficient reserve in accordance with article 73 of this law, a percentage at least equal to half the percentage or percentages of the deficiency fine shall be added to the discount rate of the bank, in addition to any increase in said rate which may be required to raise it above 7 per cent a year in compliance with the provisions of the preceding article.

Financial and Monetary Reforms in Bolivia Recommended by the Kemmerer Commission Enacted Into Law

[From Financial Chronicle, September 1, 1928]

Recommendations by the Kemmerer commission for financial and monetary reforms in Bolivia have been enacted into law by the Bolivian Congress, according to cable advice received in banking circles in this city. Dillon, Reed & Co., under date of August 25, 1928, supplied the following information:

The Congress has been considering the Kemmerer report in special session since early this summer and the new legislation represents substantial acceptance of the report in every important respect. The recommendations of the commission follow the principles established successfully in the financial and economic organization of other Latin American countries since the war, and call for the appointment of an American economic expert as adviser to the Bolivian Government.

The acceptance of the commission's report, completed after a three months' investigation of the currency, which had achieved a de facto stabilization for several years; the reorganization of the National Bank of Bolivia, with functions similar to those laid down for central banks of issue in other countries; and the administration of the Government finances under sound budgetary principles.

Bolivia has been off the gold standard since 1914. The new legislation reestablishes the gold standard and stabilizes the boliviano by law at an exchange rate of approximately 36.5, compared with a previous parity of 38.9 cents. The standardization will cause little or no disturbance to the country's industry and trade.

The reforms continue the National Bank's monopoly of the note issue. The notes are convertible into gold or gold exchange on demand. The charter of the bank is extended for 25 years, and those banks doing a commercial business in Bolivia will subscribe 15 per cent of their paid-up capital and surplus to its capital. The large volume of Government indebtedness to the bank will gradually be liquidated, and the bank is given sufficient power to enable it to maintain control of the money market, support the gold standard, and prevent any dangerous depletion of the country's gold reserve.

The reorganization of the National Bank has been supplemented by a general banking law which provides for inspection and control of the operation of all banks by a superintendent of banks, and for the gradual conversion of frozen assets in the form of current accounts into more liquid assets to be represented by documents eligible for rediscount at the central bank. At the same time existing legislation has been modified to permit a new negotiable instruments law and more modern regulations governing the establishment and operation of corporations.

An organic budget law has been enacted to provide rigid control of Government expenditures under a system of accounting and auditing that will prevent waste and establish definite responsibility for the administration of the revenue. For the supervision of this work the new offices of comptroller general and treasurer have been created. It is believed that the resulting supervision of expenditure will greatly increase the revenues of the Government and will make possible the actual and continuing equilibrium of the budget, now balanced at approximately 51,000,000 bolivianos or \$18,615,000.

An improved system of taxation for Government revenue is provided by revision of the laws governing the collection and administration of the taxes on property, on income, and on mining profits. The permanent fiscal commission which has now been made a part of the Ministry of Finance, will supervise not only the revenues pledged for certain external loans, but will also have control over the collection of other revenues.

The adoption of the measures proposed by the Kemmerer commission substitutes the principles of the expert American economist for fiscal practices which are now obsolete, on the basis of the best experience of other countries. There is established now a sound financial structure for the country. At the same time, the Government of Bolivia recognizes the need for strict economy in the administration of public funds. By the indorsement of the commission's report, the Government pledges itself to close scrutiny of future capital expenditures, especially in the matter of public works that are now under consideration or in process of construction.

BRAZIL

The domestic silver coinage executed in home mints during 1928 consisted of 1,250,000 2-milreis pieces, having a face value of 2,500,000 paper milreis (\$299,000).

Gold and silver coin withdrawn from monetary use during 1928

² Including 435,560,033 milreis issued by the stabilization office, which are convertible into gold at the rate of 200 milligrams, 0.900 fine, per milreis (Decree No. 5108, of Dec. 18, 1926). The gold to effect the conversion is in the stabilization office.

³ Notes issued by the Bank of Brazil, for which the Brazilian Government assumes the responsibility. The equivalent of £10,000,000 gold, formerly held by the Bank of Brazil against this paper issue, reverted to Government ownership, and is now in the amortization office.

Imports of gold coin and of gold and silver bullion during 1927: Gold coin from United States, \$34,366,010; gold coin from Great Britain, £5,000 (\$24,332); gold coin from Union of South Africa, £1,811,000 (\$8,813,231); gold bullion from various countries, \$25,000; silver bullion from various countries, \$14,000. There were no exports of gold and silver.

Fixed Gold Valuation of Brazilian Paper Milreis for the Payment of Public Dues

[From Vice Consul Fred E. Huhlein, Rio de Janeiro, in Commerce Reports, September 3, 1928]

In connection with the currency stabilization program of the Brazilian Government, the President signed a decree on May 23, 1928, fixing the value of the paper milreis in relation to that of the gold milreis, for the payment of public dues, as 4.567 paper milreis to 1 gold milreis. This decree was published in the *Diario Oficial*, July 6, 1928. It establishes the value of the paper milreis as the equivalent of 200 milligrams of gold $\frac{9}{10}$ fine, in accordance with the law approved December 18, 1926.

CHILE

The estimated quantity of gold used in the industrial arts during 1928 was as follows: Old jewelry, plate, etc., 500,000 pesos (\$60,850); domestic coins, 100,000 pesos (\$12,170); foreign coin, 20,000 pesos (\$2,434); total, 620,000 pesos (\$75,454).

The quantity of gold and silver produced during 1928 was as follows: Gold, 896 kilos (28,808 ounces), valued at 2,964,848 pesos (\$360,822); silver, 44,688 kilos (1,436,709 ounces), valued at 5,747,834 pesos (\$699,511).

Monetary Law No. 4468, of November 27, 1928

[Published in the Diario Oficial, November 28, 1928]

ARTICLE 1. In place of articles 4, 10, and 19 of law No. 606 of October 14, 1925, there shall be substituted the following:

"ART. 4. Gold shall be minted in denominations of 20 pesos or 2 condors and 40 pesos or 4 condors, which will be called, respectively, one-half Chilean libra and one Chilean libra.

"The 20-peso or 2-condor coin shall weigh 4.067932 grams, with a fineness of 0.900, and shall contain 3.66113 grams fine gold.

"The 40-peso or 4-condor coin shall weigh 8.13587 grams, with a fineness of 0.900, and shall contain 7.32228 grams of fine gold."

"ART. 10. There shall be two types of silver coins:

"(1) A 2-peso coin, weighing 12 grams, and containing 8.64 grams of fine silver.

"(2) A 1-peso coin, weighing 6 grams and containing 4.32 grams of fine silver.

"The fineness of these coins shall be 0.720; only copper shall be used in the alloy."

"ART. 19. There shall be three types of nickel coins: 20 centavos, 10 centavos, and 5 centavos.

"The composition of these coins shall be 75 per cent copper and 25 per cent nickel.

"The 20-centavo coin shall weigh 4.2 grams; the 10-centavo coin, 2.8 grams; and the 5-centavo coin, 1.8 grams.

"The tolerance of the nickel coins shall be 0.03 for the composition and 0.05 for the weight.

"No one is obliged to accept in a single payment more than 5 pesos in nickel coin.

"ART. 2. The President of the Republic is authorized to fix, once and for the term of a year, the diameter, thickness, and design of the coins.

"ART. 3. Law No. 4,111 of December 31, 1926, amending law No. 606 of October 14, 1925, is hereby repealed.

"ART. 4. This law shall enter into force on the date of its publication in the Diario Oficial.

"Santiago, November 27, 1928."

COLOMBIA

The amount of domestic silver coin withdrawn from monetary use during 1928 was 2,250 pesos (\$2,190).

Stock of gold, silver, and paper money used for monetary purposes: Gold, 17,842,013 pesos (\$17,465,631); silver, 11,778,553 pesos (\$11,464,066); paper money, 64,759,262 pesos. Stock in Government treasuries, banks, held abroad, etc., 22,414,647 pesos.

Export of gold and silver during 1928: Gold bullion, 517,866 pesos (\$504,039); gold as coming out from mines, 856,422 pesos (\$833,555); silver bullion, 100 pesos (\$97).

New Monetary Law of March 4, 1927

[From British Mint report]

A new monetary law was promulgated on March 4, 1927. The new unit will be a sucre containing 0.300933 gram of fine gold, and gold coins are authorized for denominations of 2 condors, (50 sucres) and 1 condor (25 sucres). These pieces will be of a millesimal fineness of 900 and will weigh 16.7185 and 8.35925 grams, respectively. Silver coins of 2 sucres, 1 sucre, and $\frac{1}{2}$ sucre are to weigh 10, 5, and 2.5 grams, respectively, and will be of a fineness of 720. Minor coins are authorized as follows: Nickel, 10 centavos (4 grams), 5 centavos (3 grams), $2\frac{1}{2}$ centavos (2.5 grams); bronze, 1 centavo (3.5 grams).

Extracts from the Organic Law of the Central Bank of Ecuador, of March 4, 1927

[From Registro Oficial, March 12, 1927]

Issue of notes

ART. 52. To the Central Bank is granted the exclusive right to issue notes during the 50 years of its existence, and during this period neither the Government nor any other institution shall have the right to issue paper money or any other document which may circulate as money.

ART. 53. The notes of the Central Bank shall represent gold sucres.

ART. 54. The gold sucre shall contain 0.300933 grams of fine gold or exactly one-fifth of the present United States gold dollar.

ART. 56. The notes of the Central Bank shall be accepted at par to any amount in payment of taxes, articles bought or sold, services, public and private debts. The notes shall be acceptable at the rate of 24.3325 to the condor as established by law of November 4, 1898, or to the pound sterling, in payment of customs dues or other public debts.

ART. 57. The notes of the Central Bank shall be redeemable on demand in any of the following media:

- (a) Ecuadorian gold coin established by the law of March 4, 1927;
- (b) Gold bars almost 100 per cent fine, weighing no less than 500 grams, valued in accordance with their fine gold content;
- (c) United States gold coin of legal weight, at the rate of 5 sucres to the dollar, and British pounds sterling of legal weight, at the rate of 24.3325 sucres to the pound.

(d) Sight or three-day drafts on New York and London, payable in gold and drawn on funds deposited with first-class banks in those cities.

Reserves

ART. 78. The Central Bank shall keep a gold reserve equivalent to 50 per cent of its amount of notes in circulation and deposits.

This reserve shall consist of—

- (1) Gold coin and bullion in its vaults.
- (2) Gold coin and bullion deposited abroad in first-class banks.
- (3) Sight or 3-day gold deposits in first-class New York or London banks.

ART. 79. Fifty per cent of the gold reserve required by the preceding article shall likewise be required for the notes in circulation of old banks of issue, for whose exchange and retirement the Central Bank is responsible.

¹ Fine weight.

GUIANA—BRITISH

The amount of domestic coin used in the industrial arts during 1928 is estimated as follows: Gold, 800 ounces, valued at 12,800 British Guiana dollars; silver, 500 ounces, valued at 625 British Guiana dollars.

NOTE.—One British Guiana dollar=4s. 2d.= \$1.0138.

The quantity of gold produced from placer mining during 1928 was 6,083 ounces, valued at 108,588 British Guiana dollars (\$110,086).

VENEZUELA

The gold production in 1928 amounted to 1,500.6 kilos (48,245 ounces).

The total stock of paper money in existence in Venezuela on or about December 31, 1928, was 89,196,000 bolivars, put in circulation by six banks of issue. This was guaranteed by a total gold reserve of 40,508,000 bolivars (\$7,818,044).

EUROPE

ALBANIA

Currency

The use of paper money has increased considerably during 1928, this paper money being the 5 gold franc and 20 gold franc (napoleon) denominations. The gold coins of France and Austria, which used to form a large percentage of the local currency, are met with much more infrequently; but there is still a large quantity of miscellaneous foreign silver coins in circulation. During 1927 and 1928 a small number of Albanian 100, 20, and 10 franc gold pieces were minted, but only a few of them were issued by the National Bank of Albania. The Albanian lek (1 lek=20 centimes of a gold franc) half-lek and quarter-lek were minted and put into circulation in increased quantities during 1928.

Note Circulation in Albania

[From *Economiste Europeen*, Paris, March 1, 1929]

The circulation of notes fluctuates around 1,000,000 gold francs, convertible into gold on demand.

AUSTRIA

One gold lev is equal to 26.736 paper leva. Coin values are stated in gold leva.

Law on the Stabilization of the Lev and on the Monetary Circulation in the Kingdom of Bulgaria

ARTICLE I. The monetary unit in the Kingdom of Bulgaria shall be the lev. One gram of pure gold is equivalent to 92 leva.

The lev shall be divided into 100 stotinki.

ART. II. Authority is hereby granted for the minting and putting into circulation in Bulgaria of the following coins:

Silver coins of 100, 50, and 20 leva.

Small denomination coins of nonprecious metals (nickel, copper, etc.) in denominations of 10, 5, 2, 1, 0.20, and 0.10 leva.

ART. III. The amalgam from which silver coins are to be minted shall contain 680 parts of pure silver for each 1,000 parts of amalgam.

The weights of the various silver coins shall be: 4 grams for the 20-leva pieces, 10 grams for the 50-leva pieces, and 20 grams for the 100-leva pieces.

A variation of 0.5 of 1 per cent may be allowed in the weight and composition of silver coins.

The design of the silver coins, as well as the metals to be used in the amalgam, shall be fixed by an order of the Minister of Finance which shall be published in the Official Gazette.

The same procedure shall be used for the small-change coins mentioned in Article II.

ART. IV. The State shall have the exclusive right to coin money.

All coined money shall be put into circulation by the National Bank of Bulgaria as provided by article 73 of the national bank law.

The coinage of silver pieces, as well as that of the small-change money of common metals, shall be in accordance with articles 8 and 73 of the national bank law on the recommendation of the Minister of Finance and authorized by a royal decree to be published in the Official Gazette.

The Bulgarian National Bank shall have the right to return to the State treasury coins in any amount it may find necessary, and the State treasury shall pay the bank for the nominal value of the coins so returned.

ART. V. The nominal value of the metal coins put into circulation shall not exceed 300 leva per person, as determined from the last census results.

ART. VI. The bank notes issued by the Bulgarian National Bank must be accepted as legal tender throughout the country and without limit as to the amount.

In the payment of private debts among individuals, silver coins up to 2,000 leva, and small-change coins of 10, 5, 2, and 1 leva, up to 200 leva, and coins of 0.20 and 0.10, up to 20 leva must be accepted.

The above limitations do not apply to payments made to the State treasury which must accept all amounts at the regular nominal values of the coins.

The obligations to accept or to exchange coins does not apply to coins with holes in them or those which have been altered or to coins whose weight has been reduced due to any cause except usage.

ART. VII. Silver and small-change coins which the Bulgarian National Bank may find to be considerably below their standard weight, or so worn from use that they can not be recognized, shall be withdrawn from circulation by the bank and charged against the State treasury. The latter must accept such coins from the national bank at their face value.

ART. VIII. The national-bank notes of 5, 10, 20, 50, and 100 leva shall be gradually withdrawn from circulation by replacing them by the metal coins mentioned in article 2 of the present law. Such bank notes shall cease to be legal tender not later than December, 1933.

ART. IX. The exportation of silver, silver coins, as well as silver compounds, is hereby authorized. The export of bank notes, gold bullion, gold coins, and any other gold objects shall be permitted immediately after article A of Annex I of the Protocol of the League of Nations dated March 10, 1928, shall have gone into effect and after free trade in foreign exchange becomes effective as provided in paragraph 10 of Article IV of the same protocol.

ART. X. The following laws are hereby repealed:

1. Law authorizing the principality of Bulgaria to coin money, published in No. 40 of the Official Gazette of June 4, 1880.
2. Law on the circulation of coins in the Principality of Bulgaria, No. 81, of the Official Gazette of April 17, 1897.
3. Law on the convertibility of bank notes, and on the gold reserve for such notes, in circulation, published in No. 297 of the Official Gazette of January

3, 1919, as well as all those laws whose provisions are contrary to the present law.

4. Law for the trade in gold, No. 297, of the Official Gazette of January 3, 1919. The repeal of this law shall become effective after the free trade in foreign exchange goes into effect.

Issued at Sofia, November 28, 1928.

Currency Stabilization in Czechoslovakia

[From The Statist, March 2, 1929]

Czechoslovakia was among the first countries in Europe to turn after the termination of the war from the easy downward paths of currency inflation and to tackle the difficulties of financial rehabilitation. Since 1922 the crown has been kept stable in terms of gold and the State finances have been conducted on eminently sound and conservative lines. No haste was, however, shown in giving this de facto stabilization statutory recognition. In April, 1926, the banking office of the Ministry of Finance, which had been in sole charge of the issue of currency, was abolished and its functions transferred to a full-fledged central bank of issue, the National Bank of Czechoslovakia. The national bank was intrusted with the task of maintaining the stability of the crown in terms of gold currencies at the existing level of rates, but its notes were not made legally convertible into gold or gold exchange and, strictly speaking, the crown was therefore not a gold-standard currency. According to advices received from Prague this anomaly in the position is to be removed at an early date. At a general meeting of shareholders of the national bank held this week, the governor announced that the Government would shortly introduce a bill in Parliament declaring the crown to be the definite unit of Czechoslovak exchange and giving it a statutory gold parity of 44.58 milligrams of pure gold. This will give the crown a mint parity of kroner 33.75 to the dollar in New York and of kroner 164.25 to the pound sterling in London. These are the rates that have been

effective for many years and the transition from de facto to statutory stabilization will not, therefore, have the slightest effect upon domestic conditions in Czechoslovakia, or upon the exchange market.

New French Monetary Law Approved June 25, 1928

ARTICLE 1. The provisions of article 3 of the law of August 5, 1914, which established as a temporary measure the forced circulation of the notes of the Bank of France and of the Bank of Algeria, are hereby repealed.

ART. 2. The franc, the French monetary unit, shall contain 65.5 milligrams of gold 0.900 fine. The present definition is not applicable to international payments, which, prior to promulgation of the present law, have been validly stipulated in gold francs.

ART. 3. The Bank of France shall guarantee the convertibility in gold of its notes to bearer and at sight. It is authorized to effect this conversion either by redeeming its notes in legal tender gold coin or by exchanging them for gold bullion at the rate of 65.5 milligrams of gold 0.900 fine per franc. It is not required to redeem or exchange its notes except at its central office and for such minimum amounts as shall be fixed by agreement between the Minister of Finance and the Bank of France. Convertibility of notes of the Bank of Algeria shall be guaranteed under similar conditions by agreement between the Minister of Finance and the Bank of Algeria. The Bank of France shall buy gold over the counter at its central office and at such branch offices as it may designate, at the rate of 1 franc per 65.5 milligrams of gold 0.900 fine, and without deducting interest. It is authorized to charge the seller for cost of coinage at the rate charged by the Paris mint. The cost of assay shall be charged to the seller.

ART. 4. The Bank of France shall maintain a metallic reserve in gold bullion and gold coin equal at the minimum to 35 per cent of the combined amount of its notes in circulation and its liabilities on current account. Legal provisions heretofore enacted fixing a maximum amount for the note circulation of the Bank of France are hereby repealed.

ART. 5. There shall be struck off by the mint (l'Administration des Monnaies et Medailles) gold pieces of 100 francs 0.900 fine. Deviation from the standard of fineness shall not exceed one-thousandth in excess or deficiency. Deviation in weight shall not exceed two-thousandths in excess or deficiency. These coins shall be unlimited legal tender.

ART. 6. A decree issued by the Council of Ministers shall fix the date on which the mint shall resume free coinage of gold for private account. This decree shall determine the conditions under which gold may be accepted for coinage at the rate fixed in article 2 and shall fix the charge for coinage. Until publication of this decree there shall be no coinage of gold by the mint except for account of the Bank of France, and the charge for coinage shall be 40 francs per kilogram of gold, 0.900 fine.

ART. 7. To replace 5, 10, and 20 franc notes of the Bank of France, which shall be retired from circulation before December 31, 1932, from which date they shall cease to be legal tender, the mint shall coin, for account of the Government, silver coins of a nominal value of 10 and 20 francs, 0.680 fine, to a total amount not in excess of 3,000,000,000 francs. The weight of silver coins shall be as follows: 10 grams per coin of 10 francs, 20 grams per coin of 20 francs. Deviation of weight and of fineness shall not exceed 0.005. One-third of the profit resulting from the coinage of silver shall, at the end of each year, be allocated to a reserve fund set aside for maintenance of monetary circulation; the other two-thirds shall be appropriated as provided for in article 6 of the agreement consummated June 23, 1928, between the Premier and Minister of Finance and the governor of the Bank of France. In payments between individuals silver money shall be legal tender only to the extent of a maximum amount of 250 francs. The designs of the new gold and silver coins shall be specified by decree.

ART. 8. The token currency of chambers of commerce shall be replaced as it is retired from circulation by coins of the same denominations issued by the Government. In payments between individuals, coins of bronze-aluminum shall be legal tender only to a maximum amount of 50 francs; coins of nickel and of bronze shall be legal tender only to a maximum amount of 10 francs.

ART. 9. From the promulgation of the present law, all gold and silver coins minted prior to the date of this promulgation shall cease to be legal tender between individuals and in payment of public dues.

ART. 10. The reserves of gold and silver at present held by banks which have received from the Government the privilege of note issue in the colonies and protectorates where the franc is legal tender shall be revalued on the basis of the new parity of the currency. The Minister of Finance is authorized to conclude agreements with the banks of issue designated above, fixing the conditions under which the Government shall receive all profits from revaluation.

ART. 11. Deposit accounts at the treasury which were opened with the central treasury fund under order of the Minister of Finance of December 17, 1920, are hereby discontinued. Article 104 of the law of April 19, 1926, is hereby repealed, except as regards deposits made by associations which are required or permitted to deposit their available funds with the treasury. The preceding provisions shall become effective July 1, 1928.

ART. 12. The law of the seventeenth germinal, year XI,¹ concerning the minting and assaying of coins is hereby repealed. The following laws are hereby repealed: The law of November 15, 1915, prohibiting exportation of gold bullion, gold coin, and silver coin; the law of April 12, 1916, prohibiting exportation of silver bullion; the decrees of April 1, 1915, and December 2, 1921, prohibiting exportation of nickel and copper coins, as well as bronze and aluminum pieces; the law of February 12, 1916, and October 16, 1919, prohibiting trade in national currency and specie; the law of October 20, 1919, forbidding the melting and demonetization of national coins; the provisions of the law of April 3, 1918, and of laws subsequently enacted relative to prohibition of exports of Bank of France notes in excess of a specified amount; the law of August 7, 1926, concerning operations preliminary to currency stabilization as well as all other laws inconsistent with the present enactment.

ART. 13. The following agreements are hereby approved:

(1) The agreement entered into June 23, 1928, between the Premier and Minister of Finance and the governor of the Bank of France.

(2) The agreement entered into June 23, 1928, between the Premier and Minister of Finance and the presidents of the administrative council and of the finance committee of the autonomous fund for the administration of national defense bonds and amortization of the public debt.

(3) The agreement entered into June 23, 1928, between the presidents of the administrative council and of the finance committee of the autonomous fund for the administration of national defense bonds and amortization of the public debt and the governor of the Bank of France.

These agreements are exempt from stamp and registration taxes.

The present law, considered and adopted by the Senate and Chamber of Deputies, shall be enforced as a law of the State.

Executed at Paris, June 25, 1928.

France Stabilizes Its Currency

[Extracts from cablegram from Commercial Attaché H. C. MacLean, Paris, June 24, as per Commerce Reports, issue July 2, 1928]

A convention with the Bank of France provides for the revaluation of gold holdings, including gold available abroad, on the basis of the new franc parity; that of silver holdings, at the current market price; and of exchange holdings, at the new intrinsic value on a gold basis. The net increase resulting from these operations will be applied to complete the amortization of temporary advances to the State by the bank. This revaluation will also wipe out from the credit side of the bank's books gold not available held abroad, and a debit balance on purchases under the law of August 27, 1926. Any surplus that is available will be credited to the treasury.

The treasury's indebtedness for advances to Russia will be transferred to the autonomous office, which will receive special funds for its amortization. The

¹ Apr. 6, 1799.

Bank of France will grant immediately to the treasury a loan of 3,000,000,000 francs, without interest, maturing December 31, 1945. The bank will have the right to open accounts for foreign banks of issue, for the purchase of short-term paper and to discount such paper on request.

For the first time in history the franc will be directly on a gold basis. The removal of the former legal limit on maximum note circulation, which will now be regulated by the fluctuation of the gold reserve, will give needed flexibility to the circulation. The present gold reserve of the Bank of France represents over 40 per cent of its sight obligations.

GERMANY

Domestic silver coinage executed in home mints during the year ended December 31, 1928

Denomination	Pieces	Value	
		Reichsmarks	U. S. dollars
3-reichsmark.....	190,000	570,000	135,774

1. (1) Notwithstanding anything in any act—

(a) The bank may issue bank notes for one pound and for ten shillings.

(c) Any such bank notes may be put into circulation in Scotland and Northern Ireland, and shall be current and legal tender in Scotland and Northern Ireland as in England.

(2) Section six of the Bank of England act, 1833 (which provides that bank notes shall be legal tender), shall have effect as if for the words "shall be a legal tender to the amount expressed in such note or notes and shall be taken to be valid as a tender to such amount for all sums above five pounds on all occasions on which any tender of money may be legally made" there were substituted the words "shall be legal tender for the payment of any amount."

(3) The following provisions shall have effect so long as subsection (1) of section one of the gold standard act, 1925, remains in force—

(a) Notwithstanding anything in the proviso to section six of the Bank of England act, 1833, bank notes for one pound or ten shillings shall be deemed a legal tender of payment by the bank or any branch of the bank, including payment of bank notes.

2. (1) Subject to the provisions of this act the bank shall issue bank notes up to the amount representing the gold coin and gold bullion for the time being in the issue department, and shall in addition issue bank notes to the amount of two hundred and sixty million pounds in excess of the amount first mentioned in this section, and the issue of notes which the bank is by or under this act required or authorized to make in excess of the said first-mentioned amount is in this act referred to as "the fiduciary note issue."

(2) The treasury may at any time on being requested by the bank, direct that the amount of the fiduciary note issue shall for such period as may be determined by the treasury, after consultation with the bank, be reduced by such amount as may be so determined.

3. (1) In addition to the gold coin and bullion for the time being in the issue department, the bank shall from time to time appropriate to and hold in the issue department securities of an amount in value sufficient to cover the fiduciary note issue for the time being.

(2) The securities to be held as aforesaid may include silver coin to an amount not exceeding five and one half million pounds.

(3) The bank shall from time to time give to the treasury such information as the treasury may require with respect to the securities held in the issues department, but shall not be required to include any of the said securities in the account to be taken pursuant to section five of the Bank of England act, 1819.

4. (1) As from the appointed day all currency notes issued under the currency and bank notes act, 1914, certified by the treasury to be outstanding on that date (including currency notes covered by certificates issued to any persons under section two of the currency and bank notes (amendment) act, 1914, but not including currency notes called in but not canceled) shall, for the purpose of the enactments relating to bank notes and the issue thereof (including this act) be deemed to be bank notes, and the bank shall be liable in respect thereof accordingly.

(2) The currency notes to which subsection (1) of this section applies are in this act referred to as "the transferred currency notes."

(3) At any time after the appointed day, the bank shall have power, on giving not less than three months' notice in the London, Edinburgh, and Belfast Gazettes, to call in the transferred currency notes on exchanging them for bank notes of the same value.

(4) Any currency notes called in but not canceled before the appointed day may be exchanged for bank notes of the same value.

5. (1) On the appointed day, in consideration of the bank undertaking liability in respect of the transferred currency notes, all the assets of the currency note redemption account other than Government securities shall be transferred to the issue department, and there shall also be transferred to the issue department out of the said assets Government securities of such an amount in value as will together with the other assets to be transferred as aforesaid represent in the aggregate the amount of the transferred currency notes.

For the purpose of this subsection the value of any marketable Government securities shall be taken to be their market price as on the appointed day less the accrued interest, if any, included in that price.

(2) Any bank notes transferred to the bank under this section shall be canceled.

(3) Such of the said Government securities as are not transferred to the bank under the foregoing provisions of this section shall be realized and the amount realized shall be paid into the exchequer at such time and in such manner as the treasury direct.

8. (1) If the bank at any time represent to the treasury that it is expedient that the amount of the fiduciary note issue shall be increased to some specified amount above two hundred and sixty million pounds, the treasury may authorize the bank to issue bank notes to such an increased amount, not exceeding the amount specified as aforesaid, and for such period, not exceeding six months, as the treasury think proper.

(2) Any authority so given may be renewed or varied from time to time on the like representation and in like manner:

Provided, That, notwithstanding the foregoing provision, no such authority shall be renewed so as to remain in force (whether with or without variation) after the expiration of a period of two years from the date on which it was originally given, unless Parliament otherwise determines.

9. (1) For the purpose of any enactment which in the case of a bank in Scotland or Northern Ireland limits by reference to the amount of gold and silver coin held by any such bank the amount of the notes which that bank may have in circulation, bank notes held by that bank or by the Bank (of England) on account of that bank, shall be treated as being gold coin held by that bank.

10. The form prescribed by Schedule A to the bank charter act, 1844, for the account to be issued weekly by the bank under section six of that act may be modified to such an extent as the treasury, with the concurrence of the bank, consider necessary, having regard to the provisions of this act.

11. (1) With a view to the concentration of the gold reserves and to the securing of economy in the use of gold, the following provisions of this section shall have effect so long as subsection (1) of section one of the gold standard act, 1925, remains in force.

(2) Any person in the United Kingdom owning any gold coin or bullion to an amount exceeding ten thousand pounds in value shall, on being required so to do by notice in writing from the bank, forthwith furnish to the bank in writing particulars of the gold coin and bullion owned by that person, and shall, if so required by the bank, sell to the bank the whole or any part of the said coin or bullion, other than any part thereof which is bona fide held for immediate export or which is bona fide required for industrial purposes, on payment therefor by the bank, in the case of coin, of the nominal value thereof, and in the case of bullion, at the rate fixed in section four of the bank charter act, 1844.

13. (2) This act shall come into operation on the appointed day, and the appointed day shall be such day as His Majesty may by order in council appoint * * *

NOTE.—This act also made pertinent repeal of prior conflicting acts. By Order in Council, of November 1, 1928, the appointed day of operation of the above-quoted provisions was fixed as November 22, 1928.

Amalgamation of British Treasury and Bank of England Note Issues

Effective November 22, 1928

[From the Financial Chronicle, November 17, 1928]

We find in the London Financial News of November 3 the following regarding the date fixed for the change:

It is announced in last night's London Gazette that the King by order in council has appointed November 22 as the day on which the provisions of the currency and bank notes act shall come into operation.

This is the act passed this year vesting the sole right to issue legal-tender notes in this country in the Bank of England.

The Gazette notice is the necessary official preliminary to the new issue of £1 and 10s. notes by the bank to replace the £285,000,000 worth of Treasury notes signed by Sir Warren Fisher as Secretary of the Treasury, now in circulation.

The notes have been printed in closest secrecy at the printing department of the Bank of England, and, it is believed, are of such a design as to make forgery virtually impossible.

The color of the £1 notes is understood to be green and that of the 10-shilling notes, red.

The section of the act relating to Northern Ireland banks is not included in the order. The provisions affecting these banks are to operate from the day on which the bankers' (Northern Ireland) act, 1928, comes into force.

Additional items in the matter appeared as follows in the November 5 issue of the London Financial News:

"The announcement that the 'appointed day' for the amalgamation of the note issues is to be the 22d of the present month has naturally aroused great interest in the city. It did not come as a surprise to readers of this column, as a few weeks ago we foreshadowed an early decision. In a sense, of course, the formal amalgamation means little, in that it will not in itself involve any changes in the country's credit position. All that will happen will be that on November 22 the outstanding Treasury notes, including the certificates, will be taken over by the Bank of England, and in due course the new bank notes themselves will gradually make their appearance.

"The chief practical interest of the operation lies in the effects it will produce on the Bank of England's reserve position. What these will be it is impossible to foretell, but one imagines that they may be fairly large. The possibility of the bank's reserve being affected by the fusion arises, of course, because any margin of notes below the new fiduciary limit of £260,000,000 unissued at the time when the fusion takes place will go automatically into the reserve in the banking department against a transfer of a corresponding amount of securities from the banking to the issue department."

Government Decree Establishing the Gold Standard

[Translation]

The Hellenic Republic

Having regard to Article III of the decree law of November 10, 1927, ratifying the convention of October 27, 1927, upon the renunciation by the National Bank of Greece of its privilege to issue bank notes, and upon the foundation of a new bank under the style of the Bank of Greece, and also the statutes of the Bank of Greece annexed to the convention—said decree law having been ratified by the law 3424; having regard also to Article I of the convention above mentioned, and—

Upon the proposition of our council of ministers, we have decided and order:

ARTICLE I. The weight in pure gold, of the drachma, which will serve henceforth as the monetary unit of Greece, is fixed in the following manner:
51,212 drachmas and 87 leptas equal 1,000 grammes of pure gold. Each drachma is worth $\frac{1}{51212.87}$ ths of 1 gramme of gold; that is to say 0.01952634 gramme.

ART. II. The operation of the Bank of Greece and its obligation to exchange its bank notes against foreign money in conformity with the dispositions of Article V of its statutes will commence from May 14, 1928.

Our Minister of Finance is charged with the publication and execution of the present decree.

Athens, the 12th of May, 1928.

Greece Returns to Gold

[From The Statist, May 19, 1928]

The past week has seen one more of the erring nations of Europe return to the true fold of the gold standard. Greece has devaluated the drachma at approximately one-fifteenth of its previous nominal gold value, and has established the necessary mechanism for maintaining the currency at its new gold parity. The decree which provides for the stabilization of the currency fixes the pure gold contents of the drachma at 0.019526 gram (\$0.012977269). This gives the Greek currency a London parity of 375 drachmas to the pound sterling. The drachma is being stabilized on the basis of existing conditions, the rate of de facto stabilization of the drachma having been in the neighborhood of the new legal parity for more than 12 months, and domestic conditions have attained a fair measure of adjustment to this gold valuation of the currency. The issue of new currency, the holding of the banking and currency reserves, and the safeguarding of the exchange stability of the drachma are tasks that have been intrusted to a new central bank, the Bank of Greece. This new institution began its operations this week. It is working on gold exchange standard principles,

and will be obliged to buy and sell foreign gold currencies at their respective gold export points. As regards pounds sterling, for example, the Bank of Greece will be forced to buy them at 372½ and to sell them at 377½.

The currency history of Greece since the close of the war has been typical of that of a country governed by a succession of weak and impecunious administrations. The unhappy prolongation of hostilities for Greece entailed, of course, a tremendous financial burden, which was further increased by the necessity to provide for the thousands of refugees who flocked back from Asia Minor. Nevertheless, the best opinion in Greece itself readily admits that the Governments made altogether too few efforts to collect the resources necessary to meet the additional expenditure by means of new taxes, and fell too readily to the easy but ruinous device of currency inflation. The governor of the National Bank of Greece, in a speech which he delivered a few months ago, said: "In order to cope with expenditure, which admitted neither delay nor any considerable reduction, the State followed the methods which demanded the least trouble. Instead of pressing the economy of the country and openly drawing from it the extraordinary revenue required to cover at least a considerable part of the internal expenditure, it preferred to derive financial means by fresh issues of paper money." In their recourse to this short-sighted policy finance ministers were principally supported by the very classes that stood to lose most from currency depreciation. Whenever a finance minister dared to suggest additional taxation he was attacked by the upper classes, represented by the conservative party, for being too radical. Thus, during periods of productive inactivity additional currency was pumped into circulation to meet wholly unproductive expenditure. The drachma, which was quoted at round its parity of 25.22½ in terms of sterling at the beginning of 1920, had depreciated to 400 to the pound by the beginning of 1923. Wild fluctuations between 150 and 430 occurred in the year 1923, to be followed by comparative stability at around 260 in 1924. In 1925 and 1926 the rate depreciated further, partly as a reflection of the appreciation in sterling, and after some minor fluctuations settled down to the level at which it has finally been stabilized.

The ground has been well prepared for the reintroduction of the gold standard in Greece. The national finances have been placed upon a sound basis, and budget arrears are being liquidated out of the proceeds of the recent external loan. The problem of refugee settlement is now in course of satisfactory solution. Recent borrowing operations abroad have strengthened the country's reserve of gold or gold equivalent assets. The latest return of the National Bank of Greece shows gold and gold balances abroad amounting to drachmas 2,608,000,000, as against a note circulation of drachmas 4,831,000,000. The central banking system itself has been thoroughly reorganized and now provides a mechanism adequately adapted to the control of currency and credit in Greece and especially designed to avoid in future the undesirable reaction of Government finance on monetary conditions. The new central bank, the Bank of Greece, is a model of its type. Its statutes were drawn up under the auspices of the Financial Committee of the League of Nations. The Bank of Greece is a shareholders' bank, and its relations with the Government, as defined in the statutes, offer no scope for unsatisfactory interference. The temporary advances which the bank may grant to the State are limited to drachmas 400,000,000; no other accommodation can be granted directly or indirectly to the State or State undertakings, nor is the bank to be allowed to guarantee treasury bills or other Government obligations. The Bank of Greece will be called upon to keep a reserve of 40 per cent to notes and demand liabilities. The reserve may be kept in gold or gold exchange. This week the Bank of Greece took over from the National Bank of Greece the latter's issue of notes and the cover of the issue, including the State debt. All Government deposits, and the deposits of the international financial commission, have also been transferred to the new central bank. The National Bank is making its best endeavors to induce the Greek commercial banks to transfer their deposits to the new bank of issue. The country should derive immediate benefit from the reestablishment of the gold standard. The fact that the Greek bank rate is to-day as high as 10 per cent shows that capital in Greece is still exceedingly scarce, and that with the return of confidence in the stability of the currency the country should, without much delay, receive a substantial influx of foreign capital.

¹ Estimated.

Imports of silver from Great Britain during 1927: Coin, £6,200 (\$30,172); bullion, £163 (\$793).

Exports of gold and silver coin during 1927: Gold coin to Great Britain, £62,000 (\$301,723); silver coin to Great Britain, £70,000 (\$340,655); silver coin to Northern Ireland, £30,000 (\$145,995).

The Irish Free State Coinage Act, 1926.

Extracts from Coinage Act No. 14, of April 13, 1926

2. (1) The minister (for finance) may provide and issue silver, nickel, and bronze coins of the several denominations specified in the first column of the schedule to this act, and may take such steps for the provision and issue of such coins as he shall think proper.

(2) Every coin issued under this act shall be of the standard weight and the standard fineness specified in respect thereof in the second and third columns, respectively, of the schedule to this act, but there shall be allowed in respect of all such coins the remedy (or variation from the standard weight or the standard fineness) stated in respect thereof respectively in the fifth column of the schedule to this act.

(3) The several denominations of coins issued under this act shall respectively bear to the sovereign the fractional values stated in the fourth column of the schedule to this act.

(4) The minister may by order prescribe the dimensions and design of the several denominations of coins to be issued under this act and every coin issued under this act shall be of the dimensions and design so prescribed in respect thereof.

5. (1) A tender of payment of money if made either in silver or bronze coins issued by the minister under this act and not called in under this act or partly in such coins and partly in British coins or wholly in British coins shall be a legal tender, in the case of silver coins for a payment of an amount not exceeding forty shillings but for no greater amount, and in the case of bronze coins for a payment of an amount not exceeding one shilling, but for no greater amount.

(2) A tender of payment of money if made in nickel coins issued by the minister under this act and not called in under this act shall be a legal tender for payment of an amount not exceeding five shillings, but for no greater amount.

6. The executive council may by order prescribe a date after which silver coins of all or any specified denominations issued under the coinage acts, 1870 to 1920, in the late United Kingdom or in Great Britain, or bronze coins of all or any specified denominations similarly issued, shall cease to be legal tender either generally or for any particular purposes specified therein, and whenever any such order is made the coins to which it applies shall cease to be legal tender in accordance with such order.

12. The following sections of the coinage act, 1870, are hereby repealed to the extent hereinafter mentioned, that is to say:

- Sections 4 and 5, save in so far as they relate to gold coins, and
- The whole of section 6.

*The Irish Free State Currency Act, 1927**Extracts from Currency Act No. 32 of August 20, 1927*

PART I

4. (1) The standard unit of value of Saorstát Éireann shall be the Saorstát pound, which shall be issued as hereinafter provided either in the form of a gold coin having a standard weight of 123.27447 grains of gold eleven-twelfths fine or in the form of a legal-tender note or in both forms.

PART II

Gold coinage

5. (1) Whenever any person after the commencement of this section delivers not less at any one time than one hundred ounces of gold bullion at a place for the time being appointed in that behalf by the Minister for Finance under this section, the Minister for Finance shall cause such bullion to be assayed and coined into coins authorized by this act to be issued thereunder and shall issue such coins to such person.

(2) Whenever the gold bullion delivered for coinage under this section is of the standard fineness the number of coins to be issued under this section in exchange for such bullion shall be calculated at the rate of one Saorstát pound for every 123.27447 grains of such bullion or one ten-shilling coin for every 61.63723 grains of such bullion and whenever such bullion is of a fineness superior or inferior to the standard fineness the said number of coins shall be calculated at such higher or lower (as the case may be) rate as is proportionate to such superiority or inferiority of fineness.

(7) This section shall come into operation on such day as shall be appointed in that behalf by the minister with the concurrence of the commission by notice published in the *Iris Oifigiúil*.

6. (1) Every coin issued under this act shall be of one or other of the denominations specified in the first column of the second schedule to this act, and every such coin shall be of the standard weight and the standard fineness specified in respect thereof in the second and fourth columns, respectively, of the said second schedule, but there shall be allowed in respect of all such coins the remedy (or variation from the standard weight or the standard fineness) stated in respect thereof, respectively, in the fifth column of the said second schedule.

(2) The minister may by order prescribe the dimensions and design of the several denominations of coins issued under this act and every coin so issued shall be of the dimensions and design so prescribed in respect thereof.

9. A tender of payment of money if made in gold coins issued under this act which have not been called in under this act and have not become diminished in weight by wear or otherwise, so as to be of less weight than the weight specified in respect thereof in the third column of the second schedule to this act, shall be legal tender for a payment of any amount.

Ten shillings...	61. 63723	3. 99402	61. 12500	3. 96083		0. 15000	0. 00972	

NOTE.—This currency act also provided for a permanent Currency Commission to control and maintain an issue of legal-tender notes against receipts of gold, British money of full legal tender, sight drafts on London, or approved British Government securities, as well as to control and maintain an issue of "consolidated bank notes" in lieu of all other domestic bank notes, limited to the amount of the liquid sound advances by the banks to persons in the Irish Free State.

Irish Free State Issues its Own Currency

[From The Commercial and Financial Chronicle, New York, September 22, 1928, quoting London cablegram of September 10, 1928, in Wall Street News]

The Irish Free State Currency Commission began to-day to issue legal-tender notes of 10s, £1, and £5 denominations, as the British notes cease to be legal tender in the Irish Free State. The last-mentioned notes are redeemable by the obligation at the Bank of England. The amount of British currency in the Free State is not very large, but probably £6,000,000 more are held, principally in the form of currency-note certificates, by Irish banks of issue, against their own issues in Ireland.

The Revival of the Scandinavian Monetary Union

[From the Statist, December 22, 1928]

As a result of a recent conference held in Stockholm between the representatives of the Swedish, Norwegian, and Danish central banks, an agreement has been reached for the revival of the Scandinavian Monetary Union. The union provided before the war effective machinery for maintaining the comparative stability of the three Scandinavian currencies. The basis of the union was common adherence to a monometallic standard, i. e., the gold standard. This common adherence would in itself have sufficed to insure relative stability of the currencies within the narrow limits of the gold points. This stability and the consequent facilitation of trade between three countries closely knit by economic ties was further consolidated by reciprocal agreements whereby the central banks concerned were able to draw on one another and whereby the token coins of any one country were fully accepted in the other two.

The war with its abnormal reaction on the finances even of neutral countries implied the temporary abandonment of the gold standard by the Scandinavian countries, and this step at one stroke incapacitated the whole machinery of the Scandinavian Monetary Union. The common basis of the three currencies was withdrawn and each country was left at liberty to regulate the issue of its currency and the expansion of its credit in accordance with natural forces. These forces, or rather the manner in which they were interpreted, differed very substantially in the countries in question and consequently wide fluctuations occurred in the valuation of each Scandinavian currency in terms of the other two. In Sweden the banking authorities pursued a commendably cautious policy and the measure of depreciation of the Swedish crown in terms of gold was throughout kept within comparatively narrow limits. Sweden was thus able to lead the nations of Europe in the return to the gold standard. In Denmark the policy was less strict and the inflation of currency and credit was allowed to proceed a good deal further than in Sweden before the movement was checked and effective correctives were brought into play in the summer of 1924. In Norway the unjustifiable expansion of credit was allowed to go even further than in Denmark. The widest disparity in the exchange values of the Scandinavian currencies was reached in July, 1924, when in terms of the pound sterling the Swedish, Danish, and Norwegian crowns were quoted at kronor 16.30, kronor 27.40, and kronor 32.30, respectively, par of exchange being kronor 18.159. At that time, it will be seen, the discount on Norwegian in terms of Swedish currency amounted to no less than 49 per cent, while the corresponding discount on Danish currency amounted to approximately 40 per cent. There could at the time have been little hope of an ultimate rehabilitation of the Scandinavian Monetary Union on the basis of the gold parities that obtained before the war. Yet within four years the foundations had been laid on which the edifice of the union is to be reestablished.

Sweden had reverted to the gold standard in April, 1924. Forces were soon brought into play making for an appreciation of the currencies of the other two Scandinavian countries. Both in Norway and Denmark the State finances were placed on a sound basis, and attempts were made at restricting credit and ousting from the economic system unhealthy growths and economic units dating from the war years. Even so, however, there was no immediate intention of pursuing so violent a policy of deflation as to force the value of the two currencies concerned back to their nominal parity in terms of gold. In the case of Denmark, the intention was to spread the revalorization of the currency over several decades. In Norway, as far as conscious policy had been evolved at all, the intention probably was to devalue the crown at some point to be fixed as the result of subsequent experience. At this juncture, the imponderable but important force of sentiment, backed up by international speculation, took a hand in the determination of Scandinavian monetary history, and completely upset such plans as had been made by the authorities in Denmark and Norway. The impression that the two independent Scandinavian currencies would ultimately return to parity with gold slowly grew into conviction, and thus attracted a substantial volume of bull speculation on the part of foreign interests. Obstacles were placed in the way of such speculative operations, but they proved unavailing. By the end of 1926, the Danish crown had been forced back to parity, and the National Bank of Denmark was once again entrusted with the task of redeeming its notes into gold at pre-war parity. In May of this year, the same goal was reached by Norway. The ground had thus been prepared for the

restoration of the Monetary Union. According to the report issued after the recent Stockholm conference, the union will be restored in a somewhat modified form. The gold coins of the three countries will be freely interchangeable, but the same will no longer apply to token coins, while no decision has yet been arrived at regarding the redemption of one country's notes in the other two members of the union. The reappearance of the Scandinavian Monetary Union should prove of great value to the facilitation and encouragement of economic relations between the Scandinavian countries, and will mark another milestone in the steady progress of Europe's return to normal monetary conditions.

SWITZERLAND

Domestic silver coinage executed in home mints during the year ended December 31, 1928

The Latin and Scandinavian Monetary Unions

[From The Statist, April 6, 1929]

During the 40 years preceding the outbreak of the Great War the gold franc was the recognized legal monetary standard in an area peopled by some 110,000,000 inhabitants; the franc system ranked first among the monetary systems of Europe. At present Switzerland and Albania are the only two countries whose currencies are based on the gold-franc standard and which keep their currencies stable in terms of the gold franc. While Switzerland has adhered to the system for a very long time, Albania is a newcomer, the Albanian franc having been introduced in 1925. Apart from Switzerland, the following countries had adopted the gold-franc system in pre-war days: France, Belgium, Italy, Spain, Serbia, Rumania, Bulgaria, and Greece. With the exception of Spain and Yugoslavia (the former Serbia), these countries definitely dropped the gold-franc standard between 1926 and 1929. Yugoslavia may also be considered as a country which sooner or later will drop the nominal franc basis of her monetary system; the present paper dinar represents, roughly, only one-eleventh of the pre-war dinar.

Spain's monetary policy and future is still enigmatic, though it is admitted that the restoration of the mint-par value of the peseta is within the reach of possibility. For the time being, only some 5,000,000 Europeans use the gold franc as the basis of their national currency. The rapid decay of the gold franc as a monetary unit, which in its international standing was second only to the pound sterling in pre-war times, is reflected in the final break-up of the Latin Monetary Union. Five countries, France, Belgium, Switzerland, Italy, and Greece, signed the first Latin convention in 1868, and formed thereby a kind of monetary cartel. Five years later, in 1873, the Scandinavian Monetary Union was formed by Denmark, Norway, and Sweden.

It is interesting to review briefly the postwar history of the two continental monetary unions. When the war ended both monetary unions had practically ceased to exist. Switzerland was the only one among the Latin union nations which had managed to keep her currency stable in terms of the pre-war parity, and Sweden had this distinction among the members of the Scandinavian union. During the first post-war period the outlook for a restoration of the pre-war parity in France, Belgium, and Italy was not unfavorable, as there was a strong current of public and expert opinion of prestige to revalue the two francs and the lira to their pre-war mint par. On the other hand, both Norway and Denmark passed through a banking and financial crisis which entailed a further fall in the Norwegian and Danish krone; it was anticipated at that period that the Scandinavian Monetary Union would not be restored, while the restoration of the Latin Monetary Union was considered as probable.

After 1925 a gradual but definite change in the situation took place. The heavy depreciation of the Latin currencies destroyed any prospect of a return of these countries to the former common gold unit, while both the Danish and the Norwegian exchanges were gradually revalued. The Scandinavian convention was formally repealed by the member States in 1924, but the repeal coincided with the de facto revival of common monetary links between the former monetary allies in Scandinavia. Sweden was the first European country to restore the convertibility of its notes into gold at the pre-war parity in April, 1924. Denmark did the same in January, 1927, and Norway followed in May, 1928. Estonia adopted the Scandinavian krone as her monetary basis in 1928. Thus the circle of countries with the krone as a national monetary unit is now larger than before the formal dissolution of union. The only loss of the Scandinavian system is Iceland; the Icelandic krone is likely to be stabilized at the rate of four-fifths of its mint par. The loss of Iceland as a member of the future Scandinavian Monetary Union is, however, outweighed by the probable accession of Estonia. The directors of the central banks of Sweden, Norway, and Denmark met in Stockholm in December last in order to discuss the restoration of the former Scandinavian union. No definite agreement was reached at that conference, but a scheme advocating a closer cooperation of the three central banks was adopted, and it is held that a future meeting of the financial leaders of the three countries may bring about a formal revival of the union.

Extracts from Decree of October 25, 1922, Concerning the Coinage of Gold Chervonetz

[From the Paris Mint report for 1924-25]

ARTICLE 1. The People's Commissariat of Finance is commissioned to proceed to the coinage of a gold coin called chervonetz, which must contain 1 zolotnik and 78.24 doli of fine gold.

ART. 3. The chervonetz will contain 900 parts fine gold and 100 parts copper. One pound of alloy of the above fineness will contain $47\frac{73}{121}$ chervontzi.

ART. 4. The weight of alloy of the chervonetz will be 2 zolotnik and 1.6 doli.

Extracts from Decree of February 22, 1924, Concerning the Coinage and Placing in Circulation of Silver and Copper Coins

ARTICLE 1. The People's Commissariat of Finance is commissioned to proceed to the placing in circulation of the soviet silver coins which will be struck in denominations of 10, 15, and 20 copecks, 1 poltinnike (50 copecks) and 1 ruble, and of soviet copper coins which will be struck in denominations of 1, 2, 3, and 5 copecks.

ART. 2. The soviet silver and copper coins shall be accepted in payment throughout the entire Union at the rate of 1 silver or copper ruble for 1 gold or State Bank paper ruble.

ART. 3. The silver ruble and 50-copeck coin shall be legal tender up to 25 rubles; and the other silver coins, as well as the copper coins, up to 3 rubles. But public offices shall accept them in any amount.

ART. 7. It is absolutely forbidden to accept old imperial silver and copper coins.

ART. 8. The ruble and 50-copeck coins shall contain 900 parts fine silver and 100 parts copper.

ART. 9. The ruble shall contain 18 grams fine silver. The weight of the alloy shall be 20 grams.

ART. 10. The 50-copeck coin shall contain 9 grams of pure silver and 10 grams alloy.

ART. 13. The subsidiary silver coins of 20, 15, and 10 copecks shall contain 500 parts of fine silver and 500 parts copper.

ART. 14. The fine content of the subsidiary silver coins shall be as follows:

1.8 grams for the 20-copeck coin.

1.35 grams for the 15-copeck coin.

0.9 gram for the 10-copeck coin.

ART. 15. The weight of alloy of the subsidiary silver coins shall be as follows:

3.6 grams for the 20-copeck coin.

2.7 grams for the 15-copeck coin.

1.8 grams for the 10-copeck coin.

ART. 18. There shall be coined from 1 pood (16.380 kilos) of copper, coins to the value of 50 rubles.

Bill Stabilizing Currency

[From Commercial & Financial Chronicle, New York, April 7, 1928]

On March 30 the Yugoslavia cabinet approved for submission to Parliament a bill proposed by the finance ministry, which is designated to stabilize the currency at the rate of 100 dinars to 9.13 Swiss francs (about \$1.76).

Stabilization of the Dinar

[From L'Economiste Européen, Paris, August 10, 1928]

The dinar will be kept as a monetary unit, and its value will be stabilized at the present rate. The national bank will bind itself to redeem the bank notes in gold, beginning with a minimum amount of 10,000 dinars. Foreign exchange will serve as cover for the new dinar to the extent of $33\frac{1}{3}$ per cent, the cover proper consisting of gold coin and bullion.

HEJAZ, WITH NEJD AND HASA

There is undoubtedly a large quantity of gold and silver in Hejaz. The gold consists mainly of Turkish liras and English sovereigns. Gold is highly prized by the Arabs, although silver Maria Theresia dollars are most generally used as currency.

Premium on gold in 1928: Highest, 6 per cent; lowest, 3 per cent; average, 5 per cent.

The silver coinage executed for Hejaz at the mint, Birmingham, during 1928 consisted of 600,000 majidieh pieces, 150,000 half-majidieh coins and 300,000 quarter-majidieh coins, as per report of Great Britain. The total silver coinage amounted to 750,000 majidieh (\$364,950).

The Pound Sterling as the Basis of Exchange

[From British Mint Report]

A regulation to come into force on January 23, 1928, adopted the pound sterling as the basis of exchange. The pound is fixed at 10 majidiehs (dollars) or 220 local piasters.

Currency and Banking Reform in China[From *The Statist*, London, October 27, 1928]

There appears at first sight to be a touch of fantasy about the ambitious projects which have been formulated by the Nationalist Government in China for the establishment of a central bank and for the unification of Chinese currency. Under the conditions of political and financial insecurity that still obtain in China the task certainly has the appearance of an attempt to run before the elementary technique of walking has been mastered.

There is, of course, nothing new in the chaos into which Chinese currency has fallen, or in the determination to remedy the diversity of standards by an attempt at centralizing the issue of currency. From times immemorial China has been used to a complex circulation of gold, silver, copper, iron, and paper currencies, all circulating side by side, most of them subject to relative fluctuations in value. At various times attempts have been made to establish a unified currency, but they have all come to grief on the rocks of local prejudice or owing to the overissue of the centralized currencies. Since the advent of the Nationalists in China the device of inflating paper currencies has been eagerly resorted to by certain provincial Tuhuns and military authorities, and the consequent depreciation of currency has proved a serious deterrent to domestic trade. The notes issued by the European and Japanese exchange banks provide to-day almost the only sound and stable element in the domestic currency circulation. The copper cent has virtually been banished from circulation in the larger towns, but remains supreme in the country districts. The tael varies in value from district to district; its metallic embodiment is clumsy, but nevertheless it remains the principal medium of settlement in wholesale trade transactions. Gold has been in circulation from times immemorial, but though its importance is increasing, it is still primarily a medium of hoarding. Notes are issued by numerous authorities including Government and provincial banks without any centralized control, and without any statutory requirements as to metallic backing. The result of the various issues, and of the lack of any recognized unit of account or standard is indescribable confusion which cries for remedy.

The project formulated by the Nanking Government is that China should follow the lead of other nations in unifying the currency and centralizing its issue in the hands of a single institution. Somewhat nebulous plans have already been framed for the realization of this hope. The Finance Minister of the Nanking Government, Mr. T. V. Soong, has announced the impending formation of the Central Bank of China, of which he himself is to be the governor. The new institution, which will have the right to issue notes, to mint coins, and to negotiate domestic and foreign loans, will begin its operations with a capital of \$20,000,000. The idea appears to have been well received in Chinese circles, and strong support is being secured for the new bank.

The details that are as yet available, however, give ground for the suspicion that the projected Central Bank of China will be very much of a tool in the hands of the Government, which, if it lasts at all, must for some years live in somewhat impecunious circumstances. We have already noted that the Finance Minister is to be the governor of the bank. In addition, the original capital is to be supplied by the Government. Provisions are being made for subsequent issues of shares to the public, but it is stipulated that the privately held capital must never exceed 49 per cent of the total capital. The bank will, therefore, always remain effectively controlled by the Government. It is thus probable that if the bank comes into existence at all, it will be regarded merely as an agency for levying revenue for the Government either through the flotation of domestic loans or, if that source dries up, through the more forcible method of borrowing involved by an inflation of currency. In either case the new institution would but be adding to the already existing confusion of Chinese currency.

There is, however, some hope that these ill-devised plans for monetary reconstruction, while framing its own scheme for monetary reconstruction, has also had the humility and wisdom to invite a foreign financial commission to investigate the problems at issue and to make recommendations. This commission is to be headed by Doctor Kemmerer, who has already accomplished valiant and valuable work in helping to reconstruct currencies in the South American States and in Poland. Doctor Kemmerer has accepted the invitation, and it is reported that the commission which he will lead will commence its labors early in the new year. Doctor Kemmerer himself, no doubt, realizes that all the tasks of rehabilitation to which he has so successfully applied

himself in the past will be dwarfed in comparison with that which awaits him in China. If he succeeds in stabilizing the Government finances, in unifying the currency, and in establishing it on a sound metallic basis under the control of a strong and independent central bank, Doctor Kemmerer will deserve more than the title "money doctor," which he has already earned—he will have become a financial wizard.

AMOY

The estimated quantity of gold and silver used in the industrial arts during 1928 was as follows: Gold, 54,000 ounces; silver, 60,000 ounces.

The total import of United States (\$20) gold coin during 1928 was \$10,140.

CANTON (KWANGSI AND WEST KWANGTUNG)

About 3,000,000 ounces of silver were imported during 1928 for coinage purposes. The number or value of silver 20-cent pieces actually minted is unknown and could not be obtained from the Canton Mint. The Canton silver 20-cent piece is supposed to be 0.700 fine but actually is about 0.400 fine—varying widely from piece to piece.

An unknown quantity of silver coin is reported to be minted for the Kwangsi Government—at a rough guess probably less than \$1,500,000 (gold).

The amount of silver used in the arts is considerable, but not ascertainable.

Approximate stock of silver coin and paper money used for monetary purposes in Kwangtung Province on December 31, 1928

Canton Mint Reopens

[From American consul general, Canton, September 7, 1928]

I have the honor to report that the Canton Mint has been reopened and is now coining silver 20-cent pieces which are to be put into immediate circulation.

The new coins are to contain 70 per cent of pure silver and it is expected that they will take the place of an issue of 20-cent pieces in the thirteenth year of the Republic (1924). These silver coins are said to be of such poor quality and to contain such a low percentage of silver that the general public has refused to accept them. The Government is having no difficulty in retiring these "thirteenth year" coins because of their low silver content, but difficulty will probably be experienced when an effort is made to call in coins of other series, which, though by no means pure, are of a relatively fixed value.

On the whole the reopening of the mint and the coinage of the new silver pieces is little more than a makeshift which can scarcely be hoped to bring about any real improvement in the conditions now prevailing in the money market in Canton. The new coins, if the Government keeps its promise and maintains the 70 per cent of silver, will probably be hoarded while other coins of lesser value will continue in circulation.

It is interesting to note that the Canton Mint has been idle for five or six years and that the machinery is understood to be in a very dilapidated state.

CHEFOO

Imports of gold and silver during 1928: Gold bullion, \$12,309; silver coin, \$1,952,186.

Exports of silver coin during 1928: \$10,972.

HONG KONG COLONY

Approximate stock of silver coin and bank notes used for monetary purposes on December 31, 1928: Silver coin in home Government treasuries, held as reserve against note issue, 40,560,000 Hong Kong dollars (\$18,546,871); notes of

banks of issue in circulation, 61,965,862 Hong Kong dollars (equivalent to 62,891,012 Yuan dollars).

The paper currency is at a considerable premium above the silver dollar on which it is based.

MANCHURIA—MUKDEN

The domestic silver coinage executed in home mints during 1928 is estimated at 10,000,000 Yuan dollar pieces (\$4,505,400).

The estimated quantity of new gold and silver bullion used in the industrial arts during 1928 was as follows: Gold, 70,000 Chinese ounces (93,333 troy ounces); silver, 250,000 Chinese ounces (333,333 troy ounces).

Approximate stock of silver coin and paper money in circulation on December 31, 1928: Silver coin, 20,000,000 Yuan dollars (\$9,010,800); gold yen notes, 25,000,000 Yuan dollars; notes of the Bank of Three Eastern Provinces, estimated at 3,000,000,000 Fengpiao dollars (equivalent to 116,054,000 Yuan dollars).

PALESTINE

Palestine Currency

[From Bankers' Magazine, New York, November, 1927]

The new Palestinian notes will be legal tender for any amount. They will be printed in English, Arabic, and Hebrew. There will be half-pound notes, pound notes, 5-pound notes, 10-pound notes, 50-pound notes, and 100-pound notes. The Palestine pound will have the same value as the pound sterling.

The subsidiary currency will be issued in "mils" or thousandths of a pound. The 50 and 100 mil pieces will be silver; the 5, 10, and 20 mil pieces, nickel-bronze; and the 1 and 2 mil pieces, bronze.

For the present, no gold coins will be minted.

Lebanon-Syrian Gold Money of Account

[From Supplément Colonial de l' Economiste Européen, Paris, October 19, 1928]

The Lebanon-Syrian gold coin, as defined by the decrees of September 28 and 29, 1926, on September 1, 1928, ceased being used as official money of account in the territory under mandate. Consequently the Lebanon-Syrian pound, as defined by decrees of March 31 and August 9, 1920, has become again the legal official money of account and of payment at the rate of 490 Lebanon-Syrian piasters to the gold pound. But obligations entered upon prior to September 1, 1928, shall be settled on the basis of 492 Lebanon-Syrian piasters to the gold pound.

TURKEY

The domestic gold coinage executed in home mints during 1928 amounted to 27,838 liras (\$122,390).

The amount of Government notes in circulation on December 31, 1928, was 153,748,563 paper liras.

The actual currency is paper.

Premium on gold in 1928: Highest, 100 gold piasters=856 paper piasters; lowest, 100 gold piasters=814 paper piasters; average, 100 gold piasters=835 paper piasters.

The New Monetary Régime of Morocco

[From Commerce Reports, October 29, 1928]

The adaptation of the monetary régime of Morocco to that of France, as modified by the French monetary stabilization law of June 25, 1928, has been agreed upon, according to a report from E. A. Masuret, office of the commercial attaché, Paris. Two new conventions—one between the State Bank of Morocco and the Moroccan Government, and the other between the bank and the French Treasury—have been signed. The latter agreement has for its object the maintenance of the Moroccan franc on a parity with the French franc. In its agreement with the Moroccan Government the State bank is obligated to increase payments made for colonization work. In addition the bank will pay to the Government the total of exchange profits made from metals or foreign security comprised in its statutory reserve. It is stated that an early decree of the Moroccan Government will approve and establish the new monetary system and that the striking of silver pieces will begin immediately thereafter.

¹ Domestic coin.

² Reported to the Director of the Mint in value only. Converted to fine ounces on basis of legal silver content of the coin and at the average price of silver in London.

³ Foreign coin.

⁴ For year ended Apr. 30, 1927.

⁵ Gold delivered by the Reichsbank.

⁶ Gold and silver.

WORLD'S MONETARY STOCKS OF GOLD, SILVER, AND PAPER MONEY AT THE CLOSE OF THE YEARS 1927 AND 1928

The following compilations have been made from such data as are available—avowedly incomplete. The amount of gold and silver in circulation in many countries is not obtainable, and in some countries that held by private banks can not be given.

For the United States the figures given cover all domestic gold and silver coin, but only such bullion and foreign coins as owned by the Government and Federal reserve banks. All foreign coin which comes into possession of the Government is converted into bullion.

Monetary stock of principal countries of the world, end of calendar year 1927

¹ Includes gold and silver certificates (representing coin and bullion held in trust in the treasury) redeemable on demand.

² Including some silver.

³ In Mexican banks on Apr. 30, 1928.

⁴ On June 30, 1928; national coin and United States bank notes in Government treasury and in banks.

⁵ United States Government notes.

⁶ Last year's figures or figures of previous years.

⁷ Newfoundland Government notes only.

⁸ In Banco Nacional, paper currency of the United States circulates.

⁹ In United States dollars.

¹⁰ New monetary unit established July 11, 1928.

¹¹ On May 31, 1928.

¹² New monetary unit established Mar. 19, 1927.

¹³ Exclusive of the gold held abroad.

¹⁴ Including nickel.

¹⁵ On Nov. 27, 1928.

¹⁶ Stock in National Bank.

NOTE.—Figures given represent each country's stock at the end of the year, except when otherwise indicated. Population figures are from the Commerce Yearbook, 1928. Blanks indicate no figures available, rather than no stock. Gold reported held abroad but not reported as set aside or "earmarked," not included in the above figures (presumably reported by the country having actual possession).

¹⁷ Exclusive of 1-schilling and 1/2-schilling coins.

¹⁸ On Dec. 25, 1928.

¹⁹ Including some minor coin.

²⁰ New monetary unit established Nov. 28, 1928.

²¹ Monetary standard not established; stabilized rate indicated.

²² On Dec. 28, 1928.

²³ New monetary unit established June 24, 1928.

²⁴ Exclusive of Spanish bank notes.

²⁵ New monetary unit established May 14, 1928.

²⁶ New monetary unit established Dec. 22, 1927.

²⁷ On Dec. 26, 1928.

²⁸ On Jan. 1, 1929.

²⁹ On Dec. 29, 1928.

³⁰ Incomplete.

³¹ Fluctuates with the price of silver.

³² Including notes.

³³ On June 30, 1928.

³⁴ In banks and Government treasury.

WORLD PRODUCTION OF GOLD AND SILVER

World production of gold and silver, 1927 and 1928

[The production figures given below are based upon the preceding data and those published in prior issues of the report of the Director of the Mint]

REPORT OF THE DIRECTOR OF THE MINT

THE TREASURY DEPARTMENT

REPORT OF THE MINT

Washington, D. C., September 14, 1927

In compliance with the provisions of section 346, Revised Statutes of the United States, I have the honor to submit herewith a report covering the operations of the mints and assay offices of the United States for the fiscal year ended June 30, 1927, being the annual report of the Director of the Mint. This report is submitted for publication in connection with the annual report of the Treasury Department.

REPORT OF THE DIRECTOR OF THE MINT

OPERATION OF THE MINTS AND ASSAY OFFICES

PART I

REPORT OF THE DIRECTOR ON THE OPERATIONS OF THE MINT SERVICE FOR THE FISCAL YEAR 1927

DEADWOOD ASSAY OFFICE

The Deadwood, S. D., assay office was closed June 30, 1927, after having functioned as an agency for the collection of bullion since its establishment 31 years ago, under the Act of March 3, 1875, and February 12, 1877. Its original and subsequent locations in the Black Hills region of South Dakota were never large, and during a period of about 15 years (1885-1900) when the Homestake Co., the only large producer of gold in the region, was unable to deposit its product at the local assay office, bullion receipts were then sent to the nearest assay office, namely, during most of the period, the assay office at Lead. During the years that followed, however, the Deadwood assay office received a considerable amount of bullion from the Homestake Co. and other producers in the region.

REPORT OF THE DIRECTOR OF THE MINT

TREASURY DEPARTMENT,
BUREAU OF THE MINT,
Washington, D. C., September 10, 1927.

SIR: In compliance with the provisions of section 345, Revised Statutes of the United States, I have the honor to submit herewith a report covering the operations of the mints and assay offices of the United States for the fiscal year ended June 30, 1927, being the fifty-fifth annual report of the Director of the Mint. There is also submitted for publication in connection therewith the annual report of this bureau upon the production and consumption of the precious metals in the United States for the calendar year 1926.

OPERATION OF THE MINTS AND ASSAY OFFICES

INSTITUTIONS OF THE MINT SERVICE

All of the 11 mint-service institutions were in operation during the fiscal year ended June 30, 1927; coinage mints at Philadelphia, San Francisco, and Denver; assay office at New York, which makes large sales of fine gold bars; mints at New Orleans and Carson City conducted as assay offices; and assay offices at Boise, Helena, Deadwood, Seattle, and Salt Lake City. The seven last-named institutions are, in effect, bullion-purchasing agencies for the large institutions and also serve the public by making assays of ores and bullion. Electrolytic refineries are operated at the New York, Denver, and San Francisco institutions.

DEADWOOD ASSAY OFFICE

The Deadwood (S. Dak.) assay office was closed June 30, 1927, the Congress having discontinued the appropriations for its support. This office was established 30 years ago, under the acts of June 11, 1896, and February 19, 1897, its natural and exclusive territory being the Black Hills region of South Dakota. Its receipts of bullion were never large, except during a period of about three years (1910-1913) when the Homestake Co., the only large producer in that territory, was induced to deposit its product at the Deadwood office; the yearly receipts were then from six million to eight million dollars in value. During five years the deposits amounted to about \$1,000,000 annually, but during most of the life of the office the values received varied from a few hundred thousand dollars to a very few thousand dollars in recent years. Only 14 bullion deposits, worth \$2,936.52 were received during its last two years of operation. The principal work of the office during recent years has been the making of assays of samples of ores for prospectors and others.

COINAGE

The domestic coinage executed by the United States mints during the fiscal year 1927 was greater in value than that of the prior fiscal year by about \$14,000,000, although the number of pieces was approximately 61,000,000 fewer. The principal factors in this result were about \$20,000,000 more gold coin and 68,000,000 fewer pieces of minor coin. The total domestic coinage was 310,960,019 pieces, with value \$102,653,129.50, as compared with the prior year's 372,171,282 pieces, valued at \$88,614,418. The 1927 total consisted of gold, \$83,955,000; silver dollars, \$4,456,900; subsidiary silver, \$9,572,659.50; nickel, \$2,910,100; and bronze, \$1,758,470. As is usual, the Philadelphia Mint made most of the minor and subsidiary silver coin, as well as some silver dollars and about \$26,000,000 in gold. The San Francisco Mint was principally engaged upon gold coin and silver dollars, while the Denver Mint made silver dollars and small coin.

Coinage for foreign governments was made during the past fiscal year only at the Philadelphia Mint. The total was 7,099,000 pieces, which compares with 16,676,000 pieces during the prior year. For Guatemala, 90,000 gold pieces were made; for Venezuela, 1,545,000 silver pieces and 2,800,000 nickel pieces; for Peru, 620,000 silver pieces and 1,194,000 nickel pieces; and for Nicaragua, 500,000 silver pieces, 100,000 nickel pieces, and 250,000 bronze pieces.

The 1927 combined total of domestic and foreign pieces, 318,059,019, compares with last year's 388,847,282 pieces.

GOLD OPERATIONS

Gold acquired by the Government at the several mint service institutions during the fiscal year 1927 totaled \$224,246,630.64. United States gold coin received by the mints for recoinage amounted to \$2,704,940.81; transfers of gold between mint offices totaled \$11,821,953.15; the aggregate amount of gold received by the several mint service institutions during the fiscal year 1927 was \$238,773,524.60, which compares with \$208,493,228.17 during the prior year.

SILVER OPERATIONS

Receipts of purchased silver during the fiscal year 1927 totaled 6,747,524.27 fine ounces, the average cost of which was 59.9 cents per ounce, total cost being \$4,041,552.81. Silver received in exchange for bars bearing the Government stamp totaled 992,969.28 fine ounces; United States silver coin received for recoinage totaled 2,630,930.19 fine ounces, the recoinage value being \$3,637,021.17; silver deposited in trust by other governments totaled 285,961.04 fine ounces; and transfers between mint-service offices totaled 969,555.07 fine ounces, making the aggregate quantity of silver received by the several mint-service offices during the fiscal year 11,626,939.85 fine ounces, as compared with 13,016,507.07 ounces during the prior year.

Silver dollars remaining to be coined from bullion purchased under the Pittman Act amounted to about \$2,000,000.

The New York market price of silver during the fiscal year ended June 30, 1927, averaged \$0.57672; the lowest price was \$0.518125 on October 19, 1926; and the highest price \$0.660625 on July 2 and 3, 1926.

1

2

1. OREGON TRAIL HALF DOLLAR
2. VERMONT-BENNINGTON HALF DOLLAR

REFINERIES

The New York and San Francisco refineries were in operation throughout the year, as usual. The Denver refinery operated only during the last half of the year, on silver bullion only. The quantity of gold and silver in unrefined bullion on hand was reduced during the year by about 45 tons, but there is still on hand about 437 tons, approximately 54 per cent of which is gold.

Production of electrolytically refined gold during the fiscal year ended June 30, 1927, totaled 2,752,093 fine ounces (94.35 tons) as compared with 3,272,689 fine ounces (112.2 tons) during the prior fiscal year, and electrolytically refined silver totaled 3,690,118 fine ounces (126.5 tons) as compared with 4,977,646 fine ounces (170.7 tons) during prior year.

COMMEMORATIVE COINS

Coins of special design, authorized by Congress, were issued during the fiscal year 1927, as follows:

The Vermont-Bennington half dollar was authorized by act of Congress approved February 24, 1925, in commemoration of the one hundred and fiftieth anniversary of the independence of Vermont and of the battle of Bennington. It was designed by Charles Keck. In addition to the legends and inscriptions required by basic law, the obverse of the coin bears a likeness of Ira Allen, with his name as founder of Vermont. The reverse carries the figure of a catamount, the name and date of the Battle of Bennington, which occurred August 16, 1777; also the year of the coin's issue, 1927, and the words "Half Dollar."

The Oregon Trail half dollar is a special-design coin authorized by act of Congress May 17, 1926, to commemorate the heroism of the pioneers who traveled to the Far West, and to aid in erection of suitable monuments to commemorate the tragic events associated with that emigration, which resulted in adding new States to the Union. The obverse of the coin bears a likeness of an old-time Conestoga wagon drawn by oxen over the brow of a hill and toward the setting sun. The phrase "Oregon Trail Memorial" appears, as well as other inscriptions required by law. On the reverse of the coin appears the full-length figure of an Indian with typical headdress, blanket, and bow. The left hand of the Indian is raised as if in warning to those of the East. The Oregon Trail is traced across a map of the United States as a background on this side of the coin, which was designed by Mrs. Laura G. Frazer.

STOCK OF COIN AND MONETARY BULLION IN THE UNITED STATES

On June 30, 1927, the estimated stock of domestic coin in the United States was \$2,138,004,166, of which \$1,304,469,861 was gold, \$537,944,446 standard silver dollars, and \$295,589,859 subsidiary silver coin.

The stock of gold bullion in the mints, assay offices, and Federal reserve banks on the same date was valued at \$3,260,628,275, a decrease during the year of \$8,105,370; the stock of silver bullion was 9,068,349.88 fine ounces, a reduction of 1,005,387.72 fine ounces.

REPORT OF THE DIRECTOR OF THE MINT

PRODUCTION OF GOLD AND SILVER

Domestic gold production during the calendar year 1926 was \$48,269,600, as compared with \$49,860,200 in 1925. The output has declined to under 48 per cent of that for the record year 1915, when the total was \$101,035,700.

Silver of domestic production during 1926 totaled 62,718,746 ounces, valued at \$39,136,497; this compares with 66,155,424 ounces, valued at \$45,911,864, for 1925, and with the record production of 1915, 74,961,075 fine ounces, valued at \$37,397,300.

INDUSTRIAL CONSUMPTION OF GOLD AND SILVER

Gold consumption in the industrial arts during the calendar year 1926 is estimated at \$74,333,684, of which \$43,268,236 was new material.

Silver used in the arts is estimated at 39,408,393 fine ounces, of which 29,407,601 fine ounces was new material.

As compared with the prior year, silver consumption was about the same and gold consumption increased about \$8,400,000.

IMPORT AND EXPORT OF DOMESTIC GOLD COIN

The net export of domestic gold coin during the fiscal year ended June 30, 1927, was \$5,500,953; during the prior fiscal year there was net export of \$46,614,511. During the 13 fiscal years 1915-1927, since the opening of the World War, there has been a net export of \$941,219,179. Since 1870 the net export of domestic gold coin has been \$1,818,868,243, as per tabulation by fiscal years, which may be found in another section of this volume.

APPROPRIATIONS, EXPENSES, AND INCOME

Appropriations available for mint service during the fiscal year 1927 totaled \$1,684,750, and reimbursements to appropriations for services rendered amounted to \$58,023.03, making a total of \$1,742,773.03.

Expenses amounted to \$1,668,244.53, of which \$1,606,311.35 was chargeable to appropriations and \$61,933.18 chargeable to income.

The income realized by the Treasury from the mint service aggregated \$9,416,010.56, of which \$8,842,025.89 was seigniorage. The seigniorage included \$1,009,519.98 on the coinage of silver dollars, which amount offsets an equal loss which was incurred when the silver dollars were melted and sold under terms of the Pittman Act. The seigniorage on subsidiary silver coin was \$3,848,205.08; on nickel coin, \$2,443,230.81; and on bronze coin, \$1,541,070.02.

Summary of appropriations, expenses, and balances, fiscal year 1927

Items	Salaries and wages	Contingent expenses	Freight on bullion	Total
Appropriations				
Earnings credited appropriations	\$1,358,250.00	\$319,000.00		\$1,684,750.00
Total available	45,380.73	12,642.30	\$7,500.00	58,023.03
Expenses	1,403,630.73	331,642.30	7,500.00	1,742,773.03
	1,324,700.73	277,278.82	4,331.80	1,606,311.35
Unexpended balances	78,930.00	54,363.48	3,168.20	136,461.68

DEPOSITS OF GOLD AND SILVER, INCOME, EXPENSES, AND EMPLOYEES, BY INSTITUTIONS, FISCAL YEAR 1927

The number and value of deposits, transfers, gross income, and expenses for the fiscal year 1927, and the number of employees on June 30, 1927, at each institution, are shown in the following table:

Institutions	Num- ber of despoits of gold and silver	Num- ber of mint service trans- fers	Coining value of gold and silver received ¹	Gross income	Gross expense	Excess of income (+) or of ex- penses (-)	Em- ployees June 30, 1927

PURCHASE OF MINOR-COINAGE METAL FOR USE IN DOMESTIC COINAGE

During the fiscal year 1927 there were purchased at the mint at Philadelphia 24,051,869.76 troy ounces of minor coinage metals at a cost of \$363,665.14, which includes 4,444,321.86 troy ounces in nickel blanks prepared for stamping, costing \$157,955.96.

There were also purchased during the same period at the mint at San Francisco 29,429.15 troy ounces of minor-coinage metals at a cost of \$168.95. The Denver Mint purchased 4,944,318.75 troy ounces of minor-coinage metals for use in coinage, costing \$53,739.06.

MINOR-COIN DISTRIBUTION COSTS

The minor-coinage distribution costs paid during the fiscal year 1927 from the profits on minor coinage amounted to \$60,956.76, as follows:

Insurance	-----	\$81. 41
Transportation	-----	49, 583. 03
Containers	-----	11, 292. 32
Total	-----	60, 956. 76

MINOR COINS OUTSTANDING

The following statement shows the coinage of minor coins, by denominations, the amount on hand, issued, melted, and outstanding June 30, 1927. Minor coins were first manufactured at the Philadelphia Mint in 1793; at the San Francisco Mint in 1908; at the Denver Mint in 1911.

PROOF BULLION (1.000 FINE)

In order to establish uniformity in assay of bullion in the offices of the mint service all proof gold and proof silver is made at the mint at Philadelphia and furnished to other offices when required.

The amount made during the fiscal year 1927 was: Gold, 365 ounces. No proof silver was made during the year.

OPERATIONS OF THE MELTING AND REFINING AND OF THE COINING DEPARTMENTS, FISCAL YEAR 1927

The aggregate quantity of metals operated upon in the above-mentioned departments of the coinage mints and assay office at New York during the fiscal year ended June 30, 1927, was 30.69 million fine ounces of gold and 45.4 million fine ounces of silver. There were also operated upon at the coinage mints 82.2 million ounces of minor coinage metal. The figures in the table following are based on the figures obtained at the settlements of the accounts.

Legal limits of wastage on the whole amount delivered by the superintendent to operative officers, as prescribed in section 3542, Revised Statutes, are as follows: Melter and refiner—gold, 0.001; silver, 0.0015; coiner—gold, 0.0005; silver, 0.001.

REFINING OPERATIONS

The net product of electrolytically refined gold and silver of the mint service during the fiscal year 1927 was 6,442,210.638 fine ounces; other electrolytic output included the equivalent of the refined metals used for aiding the processes, 2,396,834.586 fine ounces; the product of melting operations (only) totaled 1,373,688.484 fine ounces, making the total output of the refineries 10,212,733.708 fine ounces. Details are shown in the following table:

WASTAGE AND LOSS ON SALE OF SWEEPS

The value of metals wasted in the operative departments during the fiscal year ended June 30, 1927, was \$2,794.75. A loss of \$5,597.76 occurred from the difference between the assay value of the bullion contained in sweeps sold and the amount received for the same. Details are given in the table following:

Item	Mint at—			Assay office at New York	Total
	Philadel- phia	San Fran- cisco	Denver		
Gold wastage:

ENGRAVING DEPARTMENT

During the fiscal year ended June 30, 1927, the engraving department made 2,828 working dies for domestic coinage, including those for the Oregon Trail, and Battle of Bennington, memorial coinage. Master dies, hubs, and working dies were made for Philippine, Venezuelan, Guatemalan, Peruvian, and Nicaraguan coinage.

LABORATORY, BUREAU OF THE MINT

From the domestic coinage of the calendar year 1926 the assayer of this bureau tested 234 gold coins and 562 silver coins, all of which were found within the legal requirements as to weight and fineness.

The greatest deviation in fineness of gold coins from standard (the limit of tolerance being 1 one-thousandth above or below) was 0.2 one-thousandth above and 0.4 one-thousandth below.

The greatest deviation in fineness of silver coins from standard (the limit of tolerance being 3 one-thousandths above or below) was 1.3 thousandths above and 1.7 thousandths below.

The following table summarizes results of fineness tests on domestic coin:

Fineness (thousandths)	Number of gold coins				Number of silver coins			
	Phila- delphia	San Francisco	Denver	Total	Phila- delphia	San Francisco	Denver	Total

ASSAY COMMISSION'S ANNUAL TEST OF COIN

Section 3547 of the Revised Statutes provides for an annual test of the domestic coinage executed during the prior year, by a commission, of whom part are ex officio members, the others being appointed, without compensation, by the President. The purpose is "to secure a due conformity in the gold and silver coins to their respective standards of fineness and weight." The commission, which met at the Philadelphia Mint February 9 and 10, 1927, reported the following results of their examination:

Your committee on counting reports that the packages containing the pieces reserved by the several mints for the trial of coins were delivered to us by the superintendent of the mint at Philadelphia, and upon comparison of the transcripts kept by the director of the mint were found to be correct.

Several packages were selected from the deliveries of each month of all denominations coined, and the coins contained therein were counted and found to agree with the number called for in each package.

The reserved coins were then delivered to the committees on assaying and weighing. In the reports of those committees will be found an account of the disposition of these coins.

The committee on weighing have to report that they have weighed the coins shown in the appended list and have found all of them to be within the legal tolerances. The coins were selected at random from those reserved by the mints at Philadelphia, San Francisco, and Denver.

The coins were directly weighed against a set of sealed coin weights, which were accompanied by a certificate signed by the Director of the Bureau of Standards, Department of Commerce, and which gave the value of the weights in terms of United States standard. The weighings were made on a Troemner balance supplied by the Philadelphia Mint, and was tested by your committee as to the equality of the arms and as to its sensibility, which were entirely satisfactory.

Making a comparison with the standard Troy pound weight as against 10 ounces + 2 ounces, we found the agreement to be within 0.0005 ounce. The 10-ounce weight was compared with the sum of the 5, 3, and 2 ounce weights and found to agree within 0.0005 ounce.

The committee appointed to conduct the assaying of coins selected from reserve samples representing deliveries of gold and silver coined during the calendar year 1926 by the mints at Philadelphia, San Francisco, and Denver has completed its duties.

Since the law provides for legal variations in fineness of one one-thousandth above or below standard (900) on gold coin and three one-thousandths on silver coin, we are pleased to report that all assays made by the committee have been within the legal limits provided and are shown in the schedules following.

Assays of individual gold coins selected

Mint	Highest assay	Lowest assay

The foregoing report, covering the operations of the mints and assay offices of the United States for the fiscal year ended June 30, 1927, is respectfully submitted.

R. J. GRANT,
Director of the Mint.

HON. ANDREW W. MELLON,
Secretary of the Treasury.

REPORT OF THE DIRECTOR OF THE MINT ON
THE PRODUCTION AND CONSUMPTION OF GOLD AND SILVER
IN THE UNITED STATES DURING THE CALENDAR YEAR 1926

PART II

REPORT OF THE DIRECTOR OF THE MINT ON
THE PRODUCTION AND CONSUMPTION OF GOLD
AND SILVER IN THE UNITED STATES DURING
THE CALENDAR YEAR 1926

REPORT ON PRODUCTION AND CONSUMPTION OF GOLD AND SILVER IN THE UNITED STATES DURING THE CALENDAR YEAR 1926

INTRODUCTION

The official estimate of the production of gold and silver in the United States is made by the Bureau of the Mint with the cooperation of the Bureau of Mines, the latter making a mine canvass in each State and the former working backward from mint deposits through refineries, smelters, and other reduction works to the mine production estimate made by the former. The official estimate represents the material received at mint service offices and private refineries. The difference between this estimate and the mine production estimate is almost entirely due to the time element involved in the reducing processes, since differences for series of years are shown by comparison to practically offset each other. The two systems thus verify and support each other.

The gold production of the United States, including its insular dependencies, for the calendar year 1926 is estimated to have been \$48,269,600, and the production of silver is estimated at 62,718,746 fine ounces. A comparison of these figures with those for 1925 indicates approximately \$1,600,000 decrease in production of gold and approximately 3,400,000 ounces increase in silver production.

As regards individual States, the only outstanding difference in gold production as compared with the prior year is California's decrease of about \$1,250,000.

Individual States' material differences in silver production as compared with the prior year include California's decrease of 1,260,000 ounces, and Utah's decrease of 1,300,000 ounces.

A brief review of mining conditions, for which acknowledgments are made to the United States Bureau of Mines, follows; further information concerning same can be obtained by those interested by addressing the last-named bureau at Washington.

ALASKA

Alaska mines in 1926 produced gold valued at \$6,707,000, compared with an output of \$6,360,281 in 1925. The value of silver produced in Alaska in 1926 was \$430,500, or about \$52,000 less than in 1925.

In 1926 about 43.8 per cent of the total gold production came from lode mines, compared with 49.3 credited to lode mines in 1925 and 43.3 per cent in 1924.

The auriferous lode mines produced during the year gold valued at \$2,938,000 and silver valued at \$37,400. Twenty-four gold and silver lode mines and seven prospects were operated in Alaska in 1926. The copper ores contained \$377,600 in silver.

The value of the placer gold produced in Alaska in 1926 was \$3,769,000 compared with an output of \$3,223,000 in 1925. The silver recovered from placer mining operations in 1926 was valued at

\$15,500. It seems probable that the production of placer gold will be somewhat increased when several of the large mining enterprises now in course of development have completed their preparatory work. It is estimated that about 455 placer mines were operated during the season of 1926.

Thirty-two gold dredges were operated in Alaska in 1926, five more than in 1925. The dredges in 1926 handled about 5,730,000 cubic yards of gravel and produced gold valued at \$2,291,000. The production is a considerable increase over that of 1925, which was \$1,572,312. The total output of the dredges since this form of mining was introduced now amounts to \$32,151,000.

ARIZONA

Arizona mines produced gold in 1926 to a value of \$4,837,436, an increase of \$667,081 from that of 1925, according to V. C. Heikes, of the Bureau of Mines. The larger part of the gold, or \$2,834,984, had its source in crude ore smelted. Gold in bullion from ore treated by amalgamation or cyanidation, which increased, was valued at \$812,150; and gold in concentrate was valued at \$1,147,614. The gold from lode mines was derived from the following sources: Dry or siliceous ore, \$1,047,759; copper ore, \$3,471,219; lead ore, \$220,900; copper-lead ore, \$53,905; lead-zinc ore, \$35,277; and zinc ore, \$1,369. Gold from siliceous ore, chiefly from Mohave County, increased about 37 per cent. Nearly 72 per cent of the State's gold came from copper ore, while placers produced only \$7,007 in gold.

The silver output amounted to 7,381,027 ounces, an increase of 123,159 ounces from the output of 1925. Silver from copper ore continued to increase but that from siliceous ore materially decreased. The sources of the silver output were: Siliceous ore, 460,826 ounces; copper ore, 5,984,415 ounces; lead ore, 716,945 ounces; copper-lead ore, 145,989 ounces; lead-zinc ore, 38,864 ounces; zinc ore, 33,932 ounces; and placers, 56 ounces.

There were 383 mines producing during the year, of which number only 21 were placer mines.

CALIFORNIA

California mines in 1926, according to James M. Hill, of the United States Bureau of Mines, produced \$11,923,481 in gold, of which placer mines produced \$5,228,403 and lode mines \$6,695,078. The gold production from placer mines increased 3 per cent, but lode production was 16 per cent less, and the total output of gold was 9 per cent less than in 1925. Gold dredges in 1926 produced \$4,950,545 in gold, which was 95 per cent of the gold produced at placer mines. Dry gold ore and tailings yielded 53 per cent of the total gold and 95 per cent of the gold from lode mines. Silver ore and tailings carried 0.71 per cent of the total gold, or 1 per cent of the lode gold; copper ore, 1.95 per cent of the total gold and 3 per cent of the gold won at lode mines in California.

In 1926 California mines produced 2,022,460 ounces of silver, valued at \$1,262,015, a decrease of 34 per cent in quantity and 40 per cent in value as compared with 1925. The yield of silver from placer mines was 19,362 ounces, or 0.96 per cent of the total silver of the State. Lode mines produced 2,003,098 ounces of silver in

1926, of which silver ore and tailings yielded 58 per cent, copper ore and tailings 20 per cent, lead ore and tailings 6 per cent, zinc ore 7 per cent, and lead-zinc ore 4 per cent.

There were 335 producing lode mines, and 483 producing placer mines including 23 dredges, in California in 1926.

COLORADO

According to Charles W. Henderson, United States Bureau of Mines, the production of Colorado metal mines in 1926, in terms of gross value of recovered and recoverable content of gold, silver, copper, lead, and zinc, at average yearly prices, was only slightly less than the \$20,851,267 credited for the year 1925. The gross calculated value for 1924 was \$18,620,796.

In comparative value of product in 1926, gold ranked first, lead second, and zinc third. Of the strictly gold districts the Cripple Creek district yielded \$4,500,000 in 1926 and the Summitville district \$100,000. Placer mines yielded \$47,419 in gold, of which \$38,860 was recovered by dredges. With the exception of some strictly gold ore from the gold area of the Leadville district, from La Plata, Boulder, and Clear Creek Counties, the rest of the gold production came from complex ores from 16 counties.

The total gold production of the State was 340,214 fine ounces, valued at \$7,032,848, and the total silver was 4,786,000 fine ounces.

The silver production came almost entirely from complex ores. The former large productive silver districts—Leadville, Creede, Aspen, Georgetown, and Silver Plume—now market silver ores (other than the lead-zinc-silver ores) on a basis of silica, lime, lead, or manganese-iron content. The San Juan region ores are all complex, in which a small content of gold and silver, relatively unimportant in weight ratio, are often the vital controlling factors in the design of metallurgical plants for making marketable lead, zinc, and iron concentrates.

CENTRAL STATES

The total mine production of silver in the Central States in 1926 was 198,232 ounces, valued at \$123,697, against 228,957 ounces in 1925. All the silver from Michigan was obtained from lode copper mines, mainly recovered in electrolytic refining. The output, 105,242 fine ounces, was 34,257 ounces less than in 1925. The output of silver from Missouri in 1926, 90,000 ounces, was derived mainly from treatment of lead skimmings from lead ores mined in southeastern Missouri, but a considerable quantity was obtained from copper matte, from lead smelters and from zinc concentrates derived from the treatment of lead ores. The 1926 Missouri production of silver increased 6,660 ounces over 1925. From lead concentrates derived from southern Illinois fluorspar mines 2,990 fine ounces of silver was recovered, which was 10 ounces less than in 1925.

EASTERN OR APPALACHIAN STATES

The mine production of gold in the Eastern or Appalachian States decreased from 1,964.60 fine ounces, valued at \$40,612 in 1925, to

694.23 fine ounces, valued at \$14,351 in 1926. Tennessee produced \$8,622, Georgia \$3,074, North Carolina \$1,631, Pennsylvania \$450, South Carolina \$313, Virginia \$220, and Vermont \$41. The production from placer bullion was only 80.54 ounces, largely from small operations at Dahlonega and Sautee, in Georgia. Placers were also operated in North Carolina, South Carolina, and Virginia. The gold obtained from siliceous ores decreased from 1,356.67 fine ounces in 1925 to 172.85 ounces in 1926. It was the yield of five mines in Georgia and North Carolina. Tennessee copper ores from the Ducktown district yielded 417.09 ounces, pyritiferous magnetite ores in Pennsylvania 21.77 ounces, and copper ore from Vermont 1.98 ounces.

The mine output of silver was 106,539 ounces, or 311 ounces more than in 1925. Of this only 3 ounces was from placer bullion and only 27 ounces from siliceous ores. The copper ores of Tennessee yielded 104,000 ounces; copper ore from Vermont, 1,965 ounces. The remainder of the silver production, 544 ounces, was obtained from copper concentrates derived from pyritiferous magnetite ore in Pennsylvania.

IDAHO

In 1926, according to C. N. Gerry, of the Bureau of Mines, Idaho's output of gold was valued at \$282,569 and that of silver \$4,715,221. The production of both gold and silver was slightly less than that of 1925, although the large silver-lead mines were vigorously operated.

Gold decreased from \$431,771 in 1925 to \$282,569 in 1926, as a result of curtailed operations of both placers and lode mines, especially in Custer, Elmore, and Shoshone Counties. Of this total the placer gold amounted to \$172,826 against \$262,386 in 1925; the gold won by dredges was valued at \$141,160, a decrease from \$229,489 in 1925, as the dredge at Murray ceased work in June. Dry or siliceous ore produced more gold than any other kind of ore, or \$61,916; gold in copper ore was valued at \$8,923; lead ore, \$30,093; copper-lead ore, \$702; and lead-zinc ore, \$8,109. In 1926 more than 83 per cent of Idaho's gold came from placers and from siliceous ore.

The silver output was 7,556,444 ounces, a decrease of 186,995 ounces. Most of the silver, or 4,575,490 ounces, came from lead ore. Lead-zinc ore supplied 2,079,727 ounces; copper-lead ore, 445,520 ounces; siliceous ore, 24,335 ounces; copper ore, 429,343 ounces; and placers, 2,029 ounces. The Coeur d'Alene region alone produced 6,952,074 ounces of silver.

There were 246 mines producing during the year, of which 69 were placer mines and 177 lode mines.

MONTANA

Montana's mine output of gold in 1926, according to C. N. Gerry, of the Bureau of Mines, was valued at \$1,250,731, a decrease of \$446,899. Of this total \$1,227,903 came from lode mines and \$22,828 from placers. There was a marked decrease in gold from lode mines, due chiefly to lessened output of the Jib and Jardine mines in Jefferson and Park Counties. No dredges were operated, and the placer output was small when compared with past years. The

gold was derived principally from copper ore, which was the source of \$564,128. Gold from other sources was as follows: Siliceous ore, \$492,198; lead-zinc ore, \$111,946; lead ore, \$49,433; copper-lead ore, \$6,851; and zinc ore, \$3,347. Nearly 65 per cent of the gold was produced by the Anaconda, Jardine, St. Louis, and New Gould companies.

The output of silver decreased slightly from 13,158,191 ounces in 1925 to 12,769,092 ounces in 1926, of which nearly 87 per cent was recovered from the mines at Butte. Silver from copper-lead ore and lead-zinc ore increased considerably, but that from siliceous ore, copper ore, lead ore, and zinc ore was less than in 1925. Copper ore supplied the largest quantity of silver, 7,762,190 ounces; lead-zinc ore, 3,354,233 ounces; siliceous ore, 345,456 ounces; lead ore, 514,628 ounces; copper-lead ore, 668,986 ounces; and zinc ore, 123,437 ounces. Nearly 77 per cent of the silver was produced by the Anaconda, Butte & Superior, Silver Dyke, Butte Copper & Zinc, and Elm Orlu companies.

There were 393 producing mines, of which 335 were lode mines and 58 were placer properties.

NEVADA

The gold output of Nevada in 1926, according to V. C. Heikes, of the Bureau of Mines, had a value of \$3,625,461, a decrease as compared with \$3,867,798 in 1925. The production of gold from the Tonopah district was \$454,067, a marked decrease from that of 1925, but the Comstock district produced \$1,181,277 in gold, nearly the same as in 1925. The largest producers of gold were the Comstock Merger, Nevada Consolidated, and Elkorro properties. Most of the gold, \$2,617,366, came from siliceous ore. Copper ore supplied gold valued at \$752,640; placers, \$59,249; lead ore, \$176,499; lead-zinc ore, \$15,500; and copper-lead ore, \$4,207.

The production of silver was 6,518,983 ounces, a decrease from 7,096,618 ounces in 1925. The mines of the Tonopah district in Nye and Esmeralda Counties produced 2,052,956 ounces, which is a large decrease, but more than the production of any other district in the State. Ore was mined in the western part of the district in Esmeralda County, but the production was 33 per cent less than in 1925. Comstock district, Storey County, increased its output from 1,350,156 ounces to 1,534,116 ounces of silver, largely from the Comstock Merger property. Most of the silver of the State, 4,509,178 ounces, had its source in siliceous ore, the greater part of which was treated by cyanidation. Silver from lead ore amounted to 1,395,285 ounces; lead-zinc ore, 322,613 ounces; zinc ore, 627 ounces; copper ore, 142,316 ounces; copper-lead ore, 147,470 ounces; and placers, 1,494 ounces. The largest producers of silver were the Comstock Merger, Betty O'Neal, and Tonopah Belmont mines.

There were 405 mines producing in Nevada in 1926, of which 28 were placer mines and 377 were lode mines.

NEW MEXICO

The production of New Mexico metal mines in 1926, in terms of gross value of recovered and estimated recoverable content of gold,

silver, copper, lead, and zinc at average yearly prices, according to Charles W. Henderson, of the United States Bureau of Mines, was about \$14,550,000, as compared with \$13,875,960 in 1925.

Copper is the metal of chief value produced in New Mexico. The gold output in 1926 was \$406,000 and the silver 441,000 ounces. Comparative figures for 1925 were \$549,073 in gold and 735,124 ounces of silver. These decreases in 1926 for gold and silver are due to the closing of mining in December, 1925, at Mogollon, which in 1925 produced \$163,322 in gold and 449,699 ounces of silver. This loss of gold production was partly made up by an increase from copper ores and the loss of silver production was partly made up by increased production of silver-lead ores.

OREGON

Oregon mines in 1926, according to James M. Hill of the United States Bureau of Mines, produced \$273,759 in gold of which placer mines produced \$122,758 and lode mines \$151,001. The production from placer mines decreased 34 per cent, that from lode mines 27 per cent, and the total gold output of Oregon decreased 30 per cent as compared with 1925. Dry gold ore produced in 1926 yielded 51 per cent and copper ore 4 per cent of the total gold yield. Dredges produced 27 per cent, hydraulic placer mines 11 per cent, surface placer mines 5 per cent, and drift placer mines 2 per cent of the total gold yield.

There were 29,733 ounces of silver, valued at \$18,553, produced by Oregon mines in 1926, a decrease of 9 per cent in quantity and 18 per cent in value as compared with 1925. Placer mines produced 843 ounces, or 3 per cent. Gold ore yielded 74 per cent, silver ore 1 per cent, and copper ore 22 per cent of the total.

There were 49 producing lode mines and 100 producing placer mines in Oregon in 1926.

SOUTH DAKOTA

According to Charles W. Henderson, United States Bureau of Mines, only one mine was operated in South Dakota in 1926—the Homestake, at Lead. The Homestake Mining Co.'s printed annual report shows proceeds of gold (with some silver) bars as \$5,811,944, from 1,415,775 tons of ore milled, realizing an average of \$4.105 to the ton.

TEXAS

According to Charles W. Henderson, United States Bureau of Mines, the Presidio mine, at Shafter, Presidio County, operated continuously since 1885, and the only metal mine of importance in Texas, was transferred on April 16, 1926, under a bond and lease to the American Metal Co., which closed the cyanidation mill for a while until it could develop sufficient tonnage to run the mill steadily. The production of this mine, together with small lots of ore from Allamoore, yielded \$2,270 in gold and 436,966 ounces of silver in 1926.

UTAH

The value of the metal output of Utah was \$82,662,884 in 1926, according to V. C. Heikes, of the Bureau of Mines. The metal mines of the State made a record output of copper and zinc in 1926, but the production of silver and lead was not as large as in 1925.

The gold output was valued at \$3,778,046, an increase of \$102,530 from that of 1925. Separated as to source, copper ore was most important, containing gold valued at \$2,084,830; siliceous ore supplied \$498,131 in gold; lead ore, \$394,734; lead-zinc ore, \$799,976; and zinc ore, \$41. The placer gold was valued at \$334.

The silver production in Utah decreased from a record output of 21,276,689 ounces in 1925 to 19,358,581 ounces in 1926. Separated as to source, the silver came principally from lead-zinc ore, which supplied 7,402,838 ounces; lead ore supplied 7,307,599 ounces; dry or siliceous ore, 3,365,644 ounces; copper ore, 1,281,767 ounces; and zinc ore, 732 ounces. The Tintic district, in Juab and Utah Counties, produced 8,550,848 ounces against 9,499,425 ounces in 1925. The Bingham district of Salt Lake County produced 3,528,460 ounces, and the Park City region, in Summit and Wasatch Counties, 6,620,817 ounces.

There were 166 producing properties in 1926, of which 164 were lode mines and 2 placer mines.

WASHINGTON

The output of gold in Washington in 1926, according to C. N. Gerry, of the Bureau of Mines, had a value of \$193,092, a decrease of \$37,161 from the production of 1925. Most of the gold of the State, or \$159,335, came from siliceous ore; copper ore supplied only \$3,948 in gold; lead ore, \$1,556; lead-zinc ore, \$253; and placers, \$28,000. Dredge operations at Swauk, Kittitas County, increased the output of gold from placers. Crude ore supplied \$150,269 in gold, and concentrates \$3,719. Since 1860 Washington has produced \$29,517,552 in gold.

The output of silver in 1926 was 171,649 ounces, an increase of 5,224 ounces. Of the total silver, 56,556 ounces had its source in siliceous ore, 18,456 ounces in copper ore, 82,733 ounces in lead ore, and 13,448 ounces in lead-zinc ore. Crude ore supplied most of the silver, or 139,303 ounces, concentrates 30,403 ounces, and placers 456 ounces.

There were 9 placers and 49 lode producing mines.

WYOMING

No gold or silver were mined in Wyoming in 1926.

Refinery production of gold mined in the several States and Territories in 1925 and 1926, with the increase and decrease in each for the latter year

State or Territory	Production			Increase, 1926 (value)	Decrease, 1926 (value)

¹ Valued at 62.4 cents per ounce, the average New York price.

² Valued at 69.4 cents per ounce.

¹ Valued at 62.4 cents per ounce, the average New York price of bar silver.

² Valued at 69.4 cents per ounce, the average New York price of bar silver.

Disposition of the gold and silver product of the United States, calendar year 1926

Items	Gold	Silver
Product of domestic refineries:		
Deposited at mints and assay offices, per mint returns.....	<i>Fine ounces</i> 2,515,247	<i>Fine ounces</i> 4,205,857
Sold for use in the arts, per private refineries' and dealers' reports.....	337,600	37,987,145
Nonmint bullion exported, per customs returns.....	180,746	114,333,488
Unaccounted for.....	84,486	
	3,118,079	156,526,490
Less:		
Foreign bullion contained in private refineries' and dealers' product.....	738,059	76,274,009
Old bullion contained in private refineries' and dealers' product.....	815,496	9,080,835
Prior stock decrease, per private refineries' reports.....	36,000	4,625,919
Unaccounted for, probably export of dealers' prior stocks and of refined imports.....		4,242,508
	1,589,555	94,223,271
New domestic product of private refineries.....	1,528,524	62,303,219
Unrefined domestic product deposited at mints and assay offices.....	806,518	415,527
Total domestic product of United States.....	2,335,042	62,718,746

Distribution of gold and silver production of the United States, in fine ounces, as reported by mine owners for 1926 as to sources of production

GOLD AND SILVER USED IN INDUSTRIAL ARTS IN THE UNITED STATES DURING THE CALENDAR YEAR 1926

Among the purveyors of gold and silver bars for use in the industrial arts of the United States, the United States assay office at New York and the mint at Philadelphia hold the foremost places; consequently the larger portion of the material consumed in the arts is brought under Government notice and is a matter of public record. The following table gives the value of the gold and the quantity of the silver bars issued by the Government institutions and private

refineries during the calendar year 1926, with the classes of material from which they were made.

Gold and silver issued for use in the industrial arts during the year ended December 31, 1926

Material	Issued by—	Gold	Silver
Bullion		<i>Dollars</i>	<i>Fine ounces</i>
Bullion in various forms	Mints and assay offices	63,854,872	1,343,904
United States coin ¹	Private refiners	6,978,812	37,987,145
	Banks, etc.	3,500,000	77,344
Total		74,333,684	39,408,393
Old jewelry, plate, scrap, etc., contained in private refinery returns, and that returned to monetary use		31,065,448	10,000,792
New material		43,268,236	29,407,601

¹ Estimated; the quantity of silver is equivalent to 100,000 silver dollars.

Gold furnished for use in manufactures and the arts, and classification of the materials used, by calendar years, since 1880

Calendar year	New material			Old material	Grand total
	United States coin	Domestic and foreign bullion and foreign coins	Total		
1880	\$3,300,000	\$5,511,047	\$8,811,047	\$1,294,385	\$10,105,432

¹ Total loss \$10.53, less a gain of \$3.30 on recoinage of mutilated silver dollars into subsidiary coin, giving a net loss of \$7.23.

REPORT OF THE DIRECTOR OF THE MINT

LOSSES AND GAINS ON WITHDRAWN COIN

The loss on face value of gold coin totaling \$2,727,478 withdrawn from circulation during the fiscal year 1927 was \$22,537.31, of which \$2,334.69 was reimbursable from the appropriation provided for that purpose. The loss on face value of silver coin totaling \$3,936,868.63 withdrawn from circulation was \$299,847.62, all being reimbursable from the appropriation provided. The reimbursable loss, provided for by appropriation, on minor coin totaling \$265,689.25 withdrawn during the fiscal year was \$15,042.79.

Standard silver dollars (mutilated) purchased as bullion for use in the manufacture of subsidiary silver coin, since 1883

¹ Includes United States paper currency in circulation in foreign countries and the amount held by the Cuban agency of the Federal Reserve Bank of Atlanta. Does not include silver bullion (a potential monetary asset) to the value of \$6,925,100, nor nickel and bronze coin, the value of which depends almost exclusively on the Government impression rather than intrinsic metallic value or a specific reserve.

² Includes money held by the Cuban agency of the Federal Reserve Bank of Atlanta.

³ Population of continental United States (estimated) June 30, 1927, 116,943,000; June 30, 1926, 115,523,000; Nov. 1, 1920, 107,491,000; July 1, 1914, 99,027,000; Jan. 1, 1879, 48,231,000.

⁴ Does not include gold bullion or foreign coin outside of vaults of the Treasury, Federal reserve banks, and Federal reserve agents.

⁵ These amounts are not included in the total since the money held in trust against gold and silver certificates and Treasury notes of 1890 is included under gold coin and bullion and standard silver dollars, respectively.

⁶ The amount of money held in trust against gold and silver certificates and Treasury notes of 1890 should be deducted from this total before combining it with total money outside of the Treasury to arrive at the stock of money in the United States.

⁷ This total includes \$19,638,207 of notes in process of redemption, \$139,124,060 of gold deposited for redemption of Federal reserve notes, \$7,355,599 deposited for redemption of national bank notes, \$2,830 deposited for retirement of additional circulation (act of May 30, 1908), and \$6,426,700 deposited as a reserve against postal savings deposits.

NOTE.—Gold certificates are secured dollar for dollar by gold held in the Treasury for their redemption; silver certificates are secured dollar for dollar by standard silver dollars held in the Treasury for their redemption; United States notes are secured by a gold reserve of \$155,420,721 held in the Treasury. This reserve fund may also be used for the redemption of Treasury notes of 1890, which are also secured dollar for dollar by standard silver dollars held in the Treasury. Federal reserve notes are obligations of the United States and a first lien on all the assets of the issuing Federal reserve bank. Federal reserve notes are secured by the deposit with Federal reserve agents of a like amount of gold or of gold and such discounted or purchased paper as is eligible under the terms of the Federal reserve act. Federal reserve banks must maintain a gold reserve of at least 40 per cent, including the gold redemption fund which must be deposited with the United States Treasurer, against Federal reserve notes in actual circulation. Lawful money has been deposited with the Treasurer of the United States for retirement of all outstanding Federal reserve bank notes. National bank notes are secured by United States bonds except where lawful money has been deposited with the Treasurer of the United States for their retirement. A 5 per cent fund is also maintained in lawful money with the Treasurer of the United States for the redemption of national bank notes secured by Government bonds.

Estimated monetary stock of gold and silver in the United States and the amount per capita at the close of each fiscal year since 1873

CASH HOLDINGS OF NATIONAL BANKS

Reports to the Comptroller of the Currency of cash holdings on June 30, 1927, of the national banks (7,796) give:

Gold coin.....	\$17, 121, 000
Standard silver dollars.....	6, 833, 000
Subsidiary silver and minor coin.....	30, 723, 000
Gold certificates.....	47, 629, 000
Silver certificates.....	30, 125, 000
United States notes.....	27, 276, 000
National-bank notes.....	67, 987, 000
Federal reserve and Federal reserve bank notes.....	136, 323, 000
Clearing-house certificates.....	187, 000
Total.....	364, 204, 000

CASH HOLDINGS OF NONNATIONAL BANKS

Reports to the Comptroller of the Currency of 20,168 reporting banks, other than national banks, as of June 30, 1926, show cash holdings as follows:

Gold coin.....	\$22, 842, 000
Silver coin.....	25, 417, 000
Paper currency.....	294, 050, 000
Nickels and cents.....	2, 077, 000
Not classified.....	292, 183, 000
Total.....	636, 569, 000

STOCK OF MONEY IN THE UNITED STATES DECEMBER 31, 1926

On December 31, 1926, the stock of domestic coin in the United States was \$2,034,509,855, as shown by the following table:

Stock of domestic coin in the United States December 31, 1926

Item	Gold	Silver	Total

¹ Includes United States paper currency in circulation in foreign countries and the amount held by the Cuban agencies of the Federal reserve banks. Does not include silver bullion (a potential monetary asset) to the value of \$7,815,680, nor nickel and bronze coin, the value of which depends almost exclusively on the Government impression rather than intrinsic metallic value or a specific reserve.

² Includes money held by the Cuban agencies of the Federal reserve banks of Boston and Atlanta.

³ Population of continental United States (estimated) Dec. 31, 1926, 116,232,000; Dec. 31, 1925, 114,813,000; Nov. 1, 1920, 107,491,000; July 1, 1914, 99,027,000; Jan. 1, 1879, 48,231,000.

⁴ Does not include gold bullion or foreign coin outside of vaults of the Treasury. Federal reserve banks, and Federal reserve agents.

⁵ These amounts are not included in the total since the money held in trust against gold and silver certificates and Treasury notes of 1890 is included under gold coin and bullion and standard silver dollars, respectively.

⁶ The amount of money held in trust against gold and silver certificates and Treasury notes of 1890 should be deducted from this total before combining it with total money outside of the Treasury to arrive at the stock of money in the United States.

⁷ This total includes \$16,371,684 of notes in process of redemption, \$177,952,033 of gold deposited for redemption of Federal reserve notes, \$11,255,682 deposited for redemption of national bank notes, \$3,590 deposited for retirement of additional circulation (act of May 30, 1908), and \$6,614,600 deposited as a reserve against postal savings deposits.

NOTE.—Gold certificates are secured dollar for dollar by gold held in the Treasury for their redemption; silver certificates are secured dollar for dollar by standard silver dollars held in the Treasury for their redemption; United States notes are secured by a gold reserve of \$154,188,886 held in the Treasury. Federal reserve notes are obligations of the United States and a first lien on all the assets of the issuing Federal reserve bank. Federal reserve notes are secured by the deposit with Federal reserve agents of a like amount of gold or gold and such discounted or purchased paper as is eligible under the terms of the Federal Reserve Act. Federal reserve banks must maintain a gold reserve of at least 40 per cent, including the gold redemption fund which must be deposited with the United States Treasurer, against Federal reserve notes in actual circulation. Lawful money has been deposited with the Treasurer of the United States for retirement of all outstanding Federal reserve bank notes. National bank notes are secured by United States bonds except where lawful money has been deposited with the Treasurer of the United States for their retirement. A 5 per cent fund is also maintained in lawful money with the Treasurer of the United States for the redemption of national bank notes secured by Government bonds.

NOTE.—The quantities in the column "Net imports" for both gold and silver for the years 1873-74 to 1886-87 are estimated only, deducted from the declared values of the trade for those years by the following process:

For gold, the rupee value of the monthly net imports was converted into sterling at the average rate of exchange in each month, and this sterling value was then divided by the English mint price of gold (£3 17s. 10½d.). For silver the average price of 107 rupees per 100 tolas, or 285.33 rupees per 100 ounces, was taken as the basis of the value of the annual imports.

THE COURSE OF GOLD AND SILVER

The following review of the London market during the calendar year 1926 is from the annual circular issued by Messrs. Sharps & Wilkins, bullion brokers, of London, England:

GOLD

The act constituted in 1920, which prohibited the export of gold bullion or coin without a special license, terminated at the end of 1925. By the provisions of the gold standard act of 1925 the free export of gold was permitted as from January 1, 1926, a license being no longer required. Under this act the Bank of England is compelled to sell gold bullion in amounts of not less than 400 ounces at the fixed price of 77s. 10½d. per ounce standard against payment of legal tender, but is under no obligation to exchange notes into sovereigns for domestic use. At the discretion of the Bank of England, gold coin may, however, be sold for export only, and in order to insure that this condition is strictly adhered to the bank has continued throughout the year the practice of attending to the packing of such coin and the delivery to the representatives of the shipping companies themselves.

The question of reverting to an actual gold currency continues to receive little encouragement. Coins of certain denominations have been issued for circulation by some of the continental countries with unsatisfactory results, as there has been a tendency to hoard the coins as soon as they are circulated, especially in the country districts.

In our report for 1925 we mentioned that one of the principal points of interest in connection with the return to a gold standard in this country was the effect which was likely to be produced upon the reserves of gold in London. Up to the end of 1925 these reserves had been depleted to the extent of £11,500,000, and this deficit was further increased during the first month of 1926 until the figure of £12,390,000 was reached on January 15. From this date the position gradually improved, the Bank of England securing a good proportion of the weekly arrivals of gold in the absence of any important competition until by September 20 the net efflux, since the return to a free gold market, was reduced to the small amount of £228,000. This improvement, however, was not maintained, the heavy purchases of the metal on continental account which took place during the autumn months more than absorbing the weekly arrivals from South Africa and elsewhere, so that the bank's reserves were once more drawn upon, increasing the net efflux to £5,324,000 by the end of the year. This deficit must be regarded as of minor importance compared with the very great financial advantages which have undoubtedly been gained by the return to the pre-war monetary conditions in this country.

With the return to a free gold market the fluctuations in the price of the metal have been comparatively unimportant, the highest and lowest quotations being 84s. 11½d. per ounce fine and 84s. 9¾d. per ounce fine, respectively, the practice of quoting in the London bullion market on the basis of "per ounce fine" having been maintained. The demand for gold for the Netherlands for shipment to the Dutch East Indies in connection with the flotation of new rubber companies, which was extremely large during the autumn of 1925, continued throughout the first month of 1926, but this was offset by imports of gold from Russia, nearly £2,000,000 being received in January and a further £500,000 in the following month. With the exception of purchases of approximately £1,000,000 for Germany in March and £1,000,000 for Russia in May, no important amounts of gold were bought in London on any special continental account until the autumn, although the returns issued show that monthly exports of moderate amounts continued to be made to France, Germany and the Netherlands, Spain also entering the market during July and August and Austria in the latter month. From October to the end of the year Germany became a large buyer of gold, and approximately £9,500,000 was exported to that quarter during the period referred to.

On October 21, 1926, Germany returned to a gold standard, the president of the Reichsbank announcing that the export of gold would be permitted in the event of an adverse movement in the exchange rendering such a step necessary.

The decision to increase the reserves of gold held by the Reichsbank by purchases of the metal in London and elsewhere was chiefly prompted we understand by a desire to restore confidence, partly by covering the rentenmark notes with gold to the same extent as the reichsmark notes, partly by increasing the holding

of gold against the existing circulation of subsidiary coins and partly by keeping a sufficient margin on hand to support the reichsmark, if necessary, and to justify the decision to return to pre-war monetary conditions.

The amount of gold taken by India both from London and also from South Africa for shipment direct has shown a big reduction compared with 1925. During the first few months a fair demand was received for shipment from London and considerable amounts of both bullion and sovereigns were purchased in South Africa, but, owing to a slackening off in the up-country demand and also to the fact that the comparative steadiness in the exchange rate and also in the price of gold, practically eliminating speculation in Bombay, the demand decreased considerably in June and continued extremely small throughout the remainder of the year. The reduction in the purchases on Indian account has been largely responsible for the increase in the amount of gold imported from South Africa.

* * * * *

SILVER

The silver market during 1926 has been chiefly influenced by two factors of special importance, namely, the unsatisfactory condition of affairs in China, which have gradually gone from bad to worse, and the report of the Indian Currency Commission issued for publication at the commencement of August, both producing an adverse effect upon the price of the metal and being mainly responsible for the lower level reached. There is no doubt that the chief operators in the Indian bazaars took the view that the commission on the Indian currency question would report in a manner adverse to the future price of silver, and although the demand from Bombay and Calcutta has been extremely large, very important shipments being made from London to arrive in time for the various monthly settlements, yet a good proportion of these purchases were offset by sales for forward delivery, in addition to which heavy bear selling took place continuously. The open position thus created for forward delivery amounted at one time to as much as £2,500,000, and with the persistent fall in price these transactions proved highly successful, and the covering of part of this position, from time to time, as lower levels were reached, gave temporary support to an otherwise consistently falling rate.

For the purposes of our report the prices mentioned are those for cash unless otherwise stated.

In reviewing the position of the market, the year can be divided into two periods so far as the price levels are concerned. From January to July the rate ruled between $31\frac{1}{2}$ d. and $29\frac{1}{8}$ d. per ounce standard, and from August to December between the latter figure and $24\frac{1}{8}$ d. per ounce standard, from which it will be seen that the weakness was most pronounced during the last five months of the year, in other words, subsequent to the publication of the report of the Indian Currency Commission. The report was issued in August and advocated, inter alia, the reduction of the reserves of silver to be held by the Government and the sale of the unrequired balance, about 300,000,000 ounces, over a period of 10 years.

This report, confirming the accuracy of forecast on the part of the large operators in India, not only made these latter unwilling to cover their short positions open but induced still further bear sales to be made, and the amount oversold, considerably reduced by profit-taking at an earlier date, became again quite as large, if not larger, than it had previously been. Buyers of silver for actual consumption felt little disposed to make purchases of more than they actually required at the time and, as a result, the price continued its downward course until the level was reached of about 26d. per ounce standard.

Some expectation of steadiness at this point was only natural and in all probability would have temporarily taken place, but before the market had had time to recover from the already continuous fall it was faced with heavy selling through the Banque de France, sold heavily of its silver coin in reserve, the 7,000,000 ounces were disposed of in this way. On a market already in a weakened and most sensitive condition, there could be but one result, and $24\frac{1}{8}$ d. per ounce standard was reached on October 20.

* * * * *

Owing to the general strike in this country, which occurred during early May, movements of bullion were temporarily suspended and business consequently

restricted, as it was impossible to execute any orders received for shipment either to India or elsewhere. It was perfectly obvious from the start that this attempt by the extremists to hold up the nation to ransom must inevitably fail to achieve the desired results, and with a return to normal conditions the Indian bazaars, compelled temporarily to fill their requirements in New York, resumed their buying in London.

On June 17 the recurrent announcement was made that the United States Treasury would purchase about 14,500,000 ounces of silver, representing the balance due under the Pittman Act. This announcement, which the market is now disposed to look upon rather in the nature of a hardy annual, had the effect, as in the last two years, of producing a temporary steadiness. The bill, however, has yet to be passed by the House of Representatives and no purchases of importance have taken place.

This level of 24½d. per ounce standard proved to be the lowest of the year. The important sales of silver referred to previously on continental account were over and, the up-country demand being stimulated by the lower level of price, India became a strong buyer for shipment. There was also a disposition to cover up sales and secure the handsome profits which these transactions now showed. Firmer advices were received from China, encouraging buying from that quarter, with the result that a more or less continuous improvement took place to 26d. per ounce standard quoted on November 16. This recovery proved rather overdone and resulted in fresh bear selling from both India and China. America also being a continuous seller, a gradual setback took place to the level of 24½d. to 25d. per ounce standard, at which the rate has remained until the end of the year. The lower level increased the Indian demand for shipment, very large orders being received not only from Bombay but also from Calcutta, chiefly due, we believe, to the announcement made by Sir Basil Blackett that the Indian Government had not made any sales of silver and was not contemplating doing so in the immediate future.

The highest price for the year was 31½d. per ounce standard quoted on January 4 and the lowest 24½d. per ounce standard on October 20; representing a difference of 7½d. per ounce standard, the widest range in rates since the year 1921. Twenty-four and one-eighth pence per ounce standard was also the lowest quotation since November, 1925.

The prices on December 31, 1926, were 25d. and 24½d. per ounce standard for cash and forward, respectively, and compare with 31½d. per ounce standard for both deliveries quoted at the end of 1925.

It is impossible to make any forecast of prices likely to rule in 1927. Certainly at the moment the outlook does not appear particularly bright and it is not easy to find any factors which may be considered as likely to produce a permanent improvement in rates. In endeavoring to look ahead one is faced with the difficulty of contending with two very important points as yet in an undecided stage.

There is, for one, the chaotic condition of China upon which silver in the past years always has been, and in the future will be, forced to depend chiefly for its greatest support. At the present moment, with that country taking its turn in facing difficulties caused by turbulent and revolutionary elements both from without and from within, there is nothing to guide one at present to form any reasonably correct idea not only as to the ultimate outcome but even as to the length of time that must elapse before sedition and revolt are stamped out and decent organized conditions prevail.

Although the stocks of silver in Shanghai have increased considerably during the past year and are now extremely large, this is probably due, to a great extent, to silver finding its way down from up country for safe-keeping, and would quickly resume more normal proportions in the event of any real improvement in trade occurring.

The second factor which will have an important bearing upon the price of silver is the question whether the report of the currency commission will be adopted in its entirety by the Indian Government. Opinion upon this point is by no means unanimous either in London or in India. There is the question whether the people of India are much more prepared to-day to adopt the use of

Government bank notes than they have been during the past. The use of paper money—possessing in itself no intrinsic value—may not appeal to them to-day as it might have done before the war. They have the example before them of the paper money of great continental nations, in some cases entirely repudiated, in others terribly depreciated, and it will be strange if at the fiat of legislation they can be persuaded to alter, except by very gradual process, their adoption of silver (which, after all, does have some intrinsic value) as a means of hoarding their savings, and break away from habits and traditions handed down to them from generation to generation.

Any attempt by the Government to sell silver or any announcement that silver will be sold at any price in the neighborhood of current levels would most adversely affect the rate. Already the price has fallen from 30d. to 24d. per ounce standard chiefly in anticipation of such a contingency, and already the savings of millions of people of India are thereby depreciated by nearly 25 per cent. Any drastic selling of silver of large quantities would cause a violent depreciation in the price, for there is no more sensitive market in existence than that of silver.

There is also the effect which the fall in the price of silver has had and will have upon the metal industry of the United States, Mexico, and Canada. Those countries being instrumental in producing 75 per cent of the world's production, and of this production about 70 per cent is a by-product of lead, copper, gold, etc., the profit accruing from such production must necessarily decrease according to the lessened price of silver, and this should tend to affect the cost of other metals used to such an enormous extent by the world in general.

There are no prospects at present of any important amount of silver being required for coinage. On the other hand, the lower level of silver now reached will probably increase the consumption on the part of the Indian bazaars.

It will be well to be prepared during 1927 for movements in price to be brought about by either or both of the two great factors indicated above.

* * * * *

(NOTE.—British import and export figures may be found elsewhere in this volume.)

Price of silver in London and in New York

NOTE.—From 1687 to 1832 the ratios are taken from Dr. A. Soetbeer, from 1833 to 1878 from Pixley and Abell's tables, from 1879 to 1896 from daily cabled prices from London to the Bureau of the Mint, and since from daily London quotations.

RATIO OF SILVER TO GOLD, AS AFFECTED BY WORLD WAR

During the period December, 1916, to June, 1920, it is probable that the world's basic silver price was that of New York rather than that of London. The normal relationship between the two prices—New York a fraction of a cent below the London quotation with exchange considered—did not prevail during this period, when the average monthly New York price varied between approximately 3 cents above and 6 cents below the London price. This period appears to have been initiated by enormous coinages to meet war-time needs, and large silver shipments from the United States to the Orient. Its close was coincident with the removal of the product of United States mines from the world market, purchases under the Pittman Act of April 23, 1918, having begun in June, 1920.

The ratio of silver to gold, based on the New York price, was for this period: Calendar year 1917, 24.85; 1918, 21; 1919, 18.44; 1920, 20.27.

With the partial release during the first half of 1919 of British governmental control of gold export, the London price of exportable gold advanced above its monetary par. The ratio of silver to this

gold, based on the average London price of both metals, follows: 1919, 17.53; 1920, 20.41; 1921, 32.34; 1922, 30.11; 1923, 31.35; 1924, 30.62.

Final release of British governmental control of gold export became effective April 28, 1925, when the Chancellor of the Exchequer of Great Britain announced that the restrictions authorized by the gold and silver (export control) act of 1920 on export of gold would be discontinued from that date. This had the effect of restoring the gold standard to the United Kingdom. The example of Great Britain was followed by Australia, New Zealand, Netherlands, and the Dutch East Indies, and on June 1 by South Africa. On April 29, 1925, the London quotation on gold dropped more than 1 shilling to 84s. 11d. per fine ounce, as compared with 84s. 11.45d., mint par. Thereafter the quotation fluctuated between 84s. 10½d. and 84s. 11½d. until January 29, 1926, when it touched 84s. 9¾d.; it has since varied between the latter figure and 84s. 11½d.

Bullion value of the silver dollar [371¼ grains of pure silver] at the annual average price of silver each calendar year since 1837

VALUES OF FOREIGN COINS, OCTOBER 1, 1927

In pursuance of the provisions of section 25, of the act of August 27, 1894, as amended by section 403, Title IV, of the act of May 27, 1921, and reenacted by section 522, Title IV, act of September 21, 1922, I hereby proclaim the following estimate by the Director of the Mint of the values of pure metal contents of foreign coins to be the values of such coins in terms of the money of account of the United States, to be followed in estimating the value of all foreign merchandise exported to the United States during the quarter beginning October 1, 1927, expressed in any such metallic currencies: *Provided, however,* That if no such value has been proclaimed, or if the value so proclaimed varies by 5 per cent or more from a value measured by the buying rate in the New York market at noon on the day of exportation, conversion shall be made at a value measured by such buying rate, as determined by the Federal Reserve Bank of New York and published by me as certified by said bank pursuant to the provisions of said section 25 as amended.

ANDREW W. MELLON,
Secretary of the Treasury.

Values of foreign coins

Country	Legal standard	Monetary unit	Value in terms of United States money	Remarks	
Argentine Republic.	Gold	Peso	\$0.9648	Currency: Paper normally convertible at 44 per cent of face value.	
Austria	do	Schilling	.1407		
Belgium	do	Belga	.1390	1 belga equals 5 paper francs.	
Bolivia	do	Boliviano	.3893	12½ bolivianos equal 1 pound sterling.	
Brazil	do	Milreis	.5462	Currency: Government paper a part of which is legally convertible at 16 pence (= \$0.3244) per milreis; now inconvertible.	
British Colonies in Australasia and Africa.	do	Pound sterling	4.8665		
British Honduras.	do	Dollar	1.0000		
Bulgaria	do	Lev	.1930		
Canada	do	Dollar	1.0000		
Chile	do	Peso	.1217		
China	Silver	Tael	Amoy	.6652	The tael is a unit of weight; not a coin. The customs unit is the Haikwan tael. The values of other taels are based on their relation to the value of the Haikwan tael. The Yuan silver dollar of 100 cents is the monetary unit of the Chinese Republic; it is equivalent to .0637—of the Haikwan tael.

FOREIGN AND WORLD MONETARY STATISTICS

The statistics of foreign countries on production, import, export, and coinage of gold and silver, and stocks of money, published annually in the reports of the Bureau of the Mint, are obtained, so far as practicable, directly from the Governments of such countries by the representatives of the United States accredited to them.

A list of interrogatories covering the points on which information is sought is sent yearly to the United States ambassadors and ministers through the Department of State, and the replies, in the form of reports, are forwarded directly to the Bureau of the Mint.

Receipts of replies to the interrogatories are frequently delayed in transmission and the available data for the calendar year under review are usually incomplete.

In the absence of official returns from foreign countries the most reliable data available are used in compiling world statistics. Where data other than from the interrogatory replies are published the source of the information is stated. Conversions of foreign moneys or values into United States equivalents have been made at the legal par rates unless otherwise stated (in the text).

Revised world tables for 1925 and tables for 1926, subject to revision, are printed at the end of this volume. Detailed data, arranged by continents and countries, follow herewith; they form the basis of the tables.

NORTH AMERICA

CANADA

The amount of domestic silver coin withdrawn from monetary use for recoinage during 1926 was \$329,556.

The amount of gold and silver in the form of jewelry, dental scrap, etc., returned from the industrial arts to monetary use during 1926 was as follows: Gold, 12,696 fine ounces, valued at \$262,455; silver, 4,684 fine ounces, valued at \$2,951.

The total amount of United States gold bullion melted at mints during 1926 was 78 fine ounces, valued at \$1,615.

Exports of silver coin to the United States during 1926: About \$60,000.

HONDURAS

The quantity of gold and silver produced from deep mines during the year ended December 31, 1926, was as follows: Gold, 5,829 fine ounces, valued at \$120,077; silver, 2,501,542 fine ounces, valued at \$1,500,925.

Approximate stock of gold and silver coin, also of paper money, used for monetary purposes on December 31, 1926: Gold coin, \$20,000; silver coin, \$500,000; notes of banks of issue \$630,000.

The actual currency consists of paper and silver coins of practically all Latin-American countries.

The new monetary law of April 3, 1926, establishing a gold standard for Honduras, while fully effective for legal purposes, has not yet been put into operation. A translation of the full authentic text of the law follows:

MONETARY SYSTEM

DECREE NO. 102

THE NATIONAL CONGRESS

Considering: That by the legislative decree No. 14 of 1919 approval was given to the decree No. 59 of 1918, issued by the Executive Power in the Council of Ministers, establishing a fixed rate of exchange of the national money in relation to the dollar on the basis of two pesos to the dollar;

Considering: That in order to facilitate commercial transactions it is necessary to establish uniformity in the monetary system of the Republic;

Therefore, in virtue of article 82 of the Political Constitution,

DECREES

ARTICLE 1. There shall be adopted as monetary unit of Honduras the lempira, equal to half of the United States dollar, or a value represented by 0.836 gram of gold, .900 fine.

The lempira is divided into 100 parts called centavos.

ART. 2. Only the Government, either itself or through private individuals, companies, or foreign governments, may coin national money.

For this purpose the Executive is authorized to issue the coins provided for in this law in the shape he deems fit and suited to the needs of the nation.

ART. 3. The gold coins of the Republic shall be as follows:

(a) A coin of twenty lempiras weighing 16.71812 grams, .900 fine, and containing 15.046308 grams of pure gold.

(b) A coin of 10 lempiras weighing 8.35906 grams, .900 fine, and containing 7.523154 grams of pure gold.

ART. 4. The silver coins of the Republic shall be as follows:

(a) A coin of 50 centavos weighing 10 grams and containing 7.2 fine grams.

(b) A coin of 25 centavos weighing 5 grams and containing 3.6 fine grams.

ART. 5. The minor coins of the Republic shall be as follows:

(a) A coin of 5 centavos weighing 5 grams and containing 75 per cent copper and 25 per cent nickel.

(b) A coin of 1 centavo weighing 3 grams and containing 95 per cent copper and 5 per cent tin and zinc.

ART. 6. The Executive power shall determine the dimensions and design of the multiples and submultiples of the lempira, as well as the limit of their remedy allowance.

ART. 7. The new coins shall be the only legal tender money of the country and shall be accepted in any amounts by the offices of the Treasury; but no private individual shall be obliged to accept in each payment more than 100 lempiras in silver coin and 5 lempiras in minor coins, except in cases of special agreements.

ART. 8. Any person having contracted the obligation to pay in silver coin of prior issue shall be legally exempted therefrom and free to pay the creditor in the new money established by the present law, in the shape, proportion, and conditions stated in article 7.

ART. 9. The new silver and minor coins shall be deposited in the vaults of the National Bank when it will be established or, in the absence of such bank, in another bank offering sufficient guarantee to perform the operations of retiring and exchanging the old money in circulation against an equivalent amount of money issued under the present law.

ART. 10. The profits accruing from the minting of the coins specified in articles 4 and 5 shall be applied to the establishment of a reserve fund called "Exchange Fund."

This reserve, which shall be used exclusively for the purposes indicated by this law, shall be deposited in the National Bank or, in the absence thereof, in another well-established bank, and shall be managed by the bank separately from the other funds of the bank or of the Government.

ART. 11. The "exchange fund" shall be used solely for the following purposes:
(a) To exchange for Honduran gold the money specified in articles 4 and 5, using, however, the redemption form provided by the following paragraph;

(b) To redeem the money specified in articles 4 and 5 in sight drafts on foreign countries when presented for redemption, charging a fee equivalent to the cost of exportation of the Honduran gold coin.

ART. 12. The profits accruing from the operations of the "exchange fund" shall be added to the latter, and the movements thereof shall be published monthly in the Official Gazette.

ART. 13. The supervision of said "exchange fund" shall be exclusively entrusted to an employee under the jurisdiction of the Secretary of the Treasury and Public Credit, called General Comptroller of Monetary Circulation. The Executive shall define his authority, duties, and responsibilities.

Pending the appointment of such an employee and the definition of his duties, his place shall be filled by the General Inspector of the Treasury.

ART. 14. The Executive power is authorized to dictate all the necessary measures leading to the execution of this law, with a view to maintaining the stability of the monetary system hereby established, retiring within a period not exceeding one year after the promulgation of this law the silver and copper coin circulating in the country at the rate of two to one or two lempiras to the dollar, according to the legislative decree No. 14 of 1919.

ART. 15. The present law annuls all the previous legal dispositions in opposition thereto.

Given at Tegucigalpa, in the Session Palace, on the third day of April, 1926.

V. CALLEJAS, *President*.

THE CURRENCY SITUATION IN HONDURAS

[Consul George P. Shaw, Tegucigalpa, in Commerce Reports, April 4, 1927]

United States currency exclusively circulated on the north coast of Honduras until the latter part of 1926, when an attempt was made to force the silver peso into circulation. The Government began paying its north-coast employees in pesos instead of dollars, and merchants, accordingly, were forced to accept silver for merchandise. American money, however, is still the principal medium of exchange, and as the large fruit and sugar plantations continue to pay their employees in American currency, probably it will not be driven out.

THE PEGGING OF THE DOMESTIC SILVER-GOLD RATE

Since the value of the Honduras silver peso, for purposes of domestic exchange, is artificially "pegged," and the price of silver abroad is such as to make it highly profitable to bring in other Central and South American silver coins which are legal tender in Honduras, silver imports are prohibited. The Government has decreed that silver and gold are exchangeable at 200 for 100 in governmental transactions. The rate of exchange according to the intrinsic value of the coins should be between 250 and 270 instead of 200.

DUTIES PAYABLE IN BOTH GOLD AND SILVER

The law provides that about 65 per cent of the duties and surcharges shall be paid in gold. In some places on the north coast all of the duties and surcharges are collected in American currency. The Government transfers these funds to be collected in American currency, where it pays its employees, Tegucigalpa through one of the principal banks, where this currency does not circulate or at least part of them, in American currency. This currency does not circulate there; the employees sell it to the merchants for pesos at a premium of about 5 per cent. The merchants in Tegucigalpa use it to pay their duties in Amapala, where little gold is available. Because of the scarcity of gold in southern Honduras the Government has not insisted upon the payment of the full 65 per cent of duties in gold. In January it required about 30 per cent at Amapala paid

in gold. Some of the large enterprises doing business in the country have sent American currency to Tegucigalpa and are selling it in competition with the banks to assist the Government to issue "lempiras," the newly authorized gold-currency unit.

THE SMUGGLING DIFFICULTY—EXCHANGE

The Government also deals to a certain extent in exchange and quotes its drafts against the north-coast funds at the pegged rate. If the prohibition on the importation of silver remains effective, and if the Government continues to get sufficient funds from its north-coast customhouses, probably the rate can be maintained for some time to come. It is very profitable, however, to smuggle silver, which has been done in the past. Should it recur on a large scale the silver coins can not continue to hold their token value.

The average rate for the purchase of dollar drafts in Tegucigalpa during 1926 was 2.15 pesos to the dollar. The average rate for the purchase of sterling drafts was \$5, or 10.75 pesos to £1.

NEWFOUNDLAND—INCLUDING LABRADOR

CURRENCY

The outstanding feature of the currency and financial situation in Newfoundland consists of practically universal use of the bank notes of four Canadian banks and currency notes of Newfoundland. The total amount of the Canadian paper bank notes in circulation is not published, and is not available, because each bank refuses to state the amount of its currency in circulation in this country for reasons of private banking business. The amount of paper \$1 and \$2 bills of Newfoundland Government issue is a negligible fraction of the total paper currency in circulation, and amounts to but \$184,918.

One and two dollar bills, legal tender of the United States, circulate freely in Newfoundland along with Newfoundland Government notes, and \$1 and \$2 notes of the Canadian banks of issue, and at the present time American \$5 paper bills, are freely acceptable in commerce and in the banks without any payment for the exchange. On American bills above the denomination of \$5 the banks and business houses in Newfoundland make an exchange charge on acceptance that amounts to one-third of 1 per cent.

NICARAGUA

The amount of gold and silver produced from deep mines during 1926 was as follows: Gold, \$686,264 (33,198 fine ounces); silver, \$33,782 (53,730 fine ounces).

Approximate stock of silver coin and bank notes used for monetary purposes on December 31, 1926

Imports of gold coin during 1926: From the United States, \$636,800; from Great Britain, £55,000 (\$267,658), and \$400.

Following is the text of the new monetary law:

BILL TO STABILIZE THE CURRENCY

[Approved by the President December 18, 1926]

ARTICLE 1. Gold, nine-tenths fine, shall be adopted as the monetary standard of Brazil.

SECTION 1. The unit shall be called "cruzeiro" ¹, and shall be divided into 100 parts.

SEC. 2. Silver, nickel, and copper, in their respective ratios, shall be adopted for the subsidiary coins.

¹ "Cruzeiro," short for "Cruzeiro do Sul," or "Southern Cross," one of the symbols of Brazil.

ART. 2. All the paper currency at present in circulation, amounting to 2,539,-304:350\$500, shall be converted into gold on the basis of 200 milligrams per milreis.

ART. 3. The method and the exact date for initiating the conversion mentioned under article 2 shall be determined six months in advance through an executive decree.

ART. 4. The financial resources for the conversion covered by this law shall be constituted:

SECTION 1. By the gold amounts already collected and deposited under the terms of the existing laws for the purposes of redemption, guarantee, and conversion of the paper currency.

SEC. 2. By the gold amounts which by virtue of this law shall be collected.

SEC. 3. By budget surpluses, after their definite conversion into gold.

SEC. 4. By the proceeds of credit operations effected for that purpose.

SEC. 5. By any other amounts which may be designated for said purpose, such as the banking profits mentioned in Clause III of the contract of April 24, 1923, authorized by law No. 4635-A of January 8, 1923, and which may be included in the reform hereby authorized.

ART. 5. Pending the issue of the decrees referred to under article 3, the exchange of notes into gold and of gold into notes, upon the basis provided in article 2, shall be made in the Caixa de Estabilizacão (Bureau of Stabilization), which for that exclusive purpose is hereby created.

Sole paragraph: The Bureau of Stabilization, or whatever other name it may be given, shall be annexed to the Bank of Brazil as soon as the latter shall be reorganized in accordance with the present law.

ART. 6. The gold received shall be placed on deposit in the Bureau of Stabilization, or in its branches in London and New York, and in no case nor upon the order of anyone shall be employed for any other purpose than for the conversion of notes issued under the personal responsibility of the Board of the Bureau of Stabilization and with the guarantee of the National Treasury. These notes shall be legal tender.

Sole paragraph: For any misuse of the deposit referred to in this article, in addition to personal responsibility, the members of this bureau shall incur the penalties of article 1 of Decree No. 4780 of December 27, 1923.

ART. 7. In the regulations to be issued for the organization of the Bureau of Stabilization, which shall be under the immediate supervision of the Minister of Finance and shall be modeled as far as possible upon the present Caixa de Amortizacão (Amortization Office), the Executive Power shall make use of the employees determining their duties and salaries.

ART. 8. The Executive Power is hereby authorized to buy and to sell foreign drafts and bills of exchange with a view to maintaining the rate mentioned in article 2. To carry out said transactions, which can not be undertaken by the Bureau of Stabilization, the Executive Power as soon as the alterations in the Bank of Brazil have been effected shall utilize the gold reserve which guarantees the present paper issue of that bank, the responsibility for which is assumed by the Government.

ART. 9. Once the conversion covered by article 3 of this law is effected, the Executive Power shall issue a decree ordering the minting of gold, silver, nickel, and copper coins, following the decimal system, and indicating their weight, value, size, and fineness as provided in this law.

ART. 10. Customs duties in gold and paper shall continue to be payable in the same ratios as now collected.

Sole paragraph: The same ratio shall be likewise maintained as regards gold payments.

ART. 11. The Executive Power is hereby authorized to alter the contract with the Bank of Brazil in accordance with this law.

ART. 12. The Executive Power is hereby authorized to effect the necessary credit operations at home and abroad for the execution of this law relative to time limit, interest, redemption, and guarantees.

ART. 13. The Executive Power is hereby authorized to provide the necessary credits up to 500:000\$000 for the execution of this law.

ART. 14. All provisions to the contrary are hereby revoked.

DECREE NO. 606 OF OCTOBER 14, 1925, ESTABLISHING NEW MONETARY UNIT IN CHILE

[From Bulletin de Statistique, Paris, November, 1926]

I. GOLD COINS

ARTICLE 1. The monetary unit of Chile shall be the peso, which shall contain 0.183057 gram of fine gold.

Ten of these units, which must contain a total of 1.83057 grams of fine gold, shall constitute the condor.

ART. 2.—On all bills and on all coins having a value of or above 10 pesos shall be indicated: In letters and in figures the value in pesos; in smaller letters the equivalent value in condors.

The terms "condor" and "peso" may be used indiscriminately in contracts to state prices, salaries, taxes, and in any other public or private obligations involving a transfer of funds.

ART. 3. The mint will coin gold coins of the denominations and weights authorized by this law from the gold bars presented, without any limitation as to quantity, as long as the quantity is not less than 500 grams and the fineness not less than 0.500. The expense of the gold coinage shall be borne by the Government; but the mint may recover the expense entailed by the assaying and refining of the bars intrusted to it for coinage. For this purpose the superintendent of the mint shall publish a table of charges approved by the President of the Republic.

ART. 4. The gold coins shall be 0.900 fine and have the following denominations and weights: 20 pesos, 4.067932 grams gross weight and 3.6611 grams fine weight; 50 pesos, 10.16983 grams gross weight and 9.15285 grams fine weight; 100 pesos, 20.33966 grams gross weight and 18.30570 grams fine weight.

ART. 5. The President of the Republic will determine, once for all, the diameter, thickness, design, and edge of the gold coins. Any subsequent change will have to be authorized by law.

ART. 6. The tolerance in the weight and fineness of the gold coinage shall be 0.001 when taken collectively or singly, and the tolerance in the weight per piece shall be 32 milligrams for the 50 and 100 peso pieces, and 16 milligrams for the 20-peso pieces.

ART. 7. All gold coins coined in accordance with the law and whose weight meets the requirement as to tolerance shall have unlimited legal tender, and shall serve to meet all classes of obligations, public or private, unless a special agreement to the contrary has been made. The gold coins coined according to law No. 277 of February 11, 1895, shall be received in payment of any debt contracted in legal tender money at the rate of 1 old peso for 3 new pesos.

The gold coins, both old and new, which are below the limit of the legal tolerance, shall be received only for the value of their actual weight.

The coins dealt with in the present law as well as those issued under the law of February 11, 1895, shall serve for the payment of any obligations contracted in national gold coin, at the rate of 1 old peso to 3 new pesos.

ART. 8. The mint and the Central Bank of Chile, which for this purpose will act as its agent, shall accept at their nominal value the Chilean gold coins which after 20 years from the date indicated on the coin show a loss due to

usage of not more than one-half per cent of their legal weight. If they have been used less than 20 years, the loss shall be proportionate to the time elapsed. The President of the Republic shall establish the loss allowed in each case in order to protect the treasury against fraudulent clipping and similar illicit practices. All gold coins received at the mint which owing to usage have lost more than the permissible weight shall be melted and recoined.

ART. 9. The gold coins coined in accordance with Law No. 277, which will be accepted by the Government, administrations and other public institutions, the Government railways or other fiscal enterprises, the Central Bank of Chile, shall be returned from circulation and deposited at the mint for recoinage.

ADDENDA

II. SILVER AND NICKEL COINS

ART. 10. There shall be four types of silver coins—5 pesos, 25 grams gross weight and 18 grams fine weight; 2 pesos, 10 grams gross weight and 7.2 grams fine weight; 1 peso, 5 grams gross weight and 3.6 grams fine weight; $\frac{1}{2}$ peso, 2.5 grams gross weight and 1.8 grams fine weight.

ART. 11. From the date of promulgation of the present law the coinage of silver coins weighing 9 grams, ordered by law No. 4014 of May 22, 1924, shall be superseded.

The President of the Republic, with the advice of the board of directors of the Central Bank of Chile, shall prescribe the rule to be followed in retiring said coins and coining new pieces in accordance with the present law.

ART. 12. The President of the Republic will determine, once for all, the diameter, thickness, design, and edge of the silver coins. Any subsequent change will have to be authorized by law.

ART. 13. The tolerance of the silver coins shall be 0.004 for the fineness and 0.003 for the weight. For each silver coin the tolerance shall be 0.130 gram for the 5, 2, and 1 peso pieces and 0.100 gram for the $\frac{1}{2}$ -peso piece.

ART. 14. No one shall be obliged to accept in payment for obligations more than 50 pesos in silver coins struck in accordance with this law. Coins clipped, perforated, corroded, or deteriorated in any way shall lose their legal-tender quality.

ART. 15. The mint and the Central Bank of Chile, which for this purpose will act as its agent, shall accept deteriorated silver and nickel coins subject to the regulations dictated by the President of the Republic in order to protect the treasury against fraudulent clipping and other abuses.

Upon receiving said coins the mint and the Central Bank of Chile shall exchange them for new coins without any expense whatsoever to the bearer.

The coins deteriorated by use shall be melted and recoined.

ART. 16. The mint shall remit at once to the Central Bank of Chile, upon the latter's request, silver or nickel coins at their legal value in exchange for gold coins or bars. If the mint receives gold bars it shall maintain, for their exchange against silver or nickel coin, the ratio established by article 3 of the present law for the exchange of gold bars against coins of the same metal.

ART. 17. The treasury, its branches and other public institutions, the railways and other fiscal enterprises, and the Central Bank of Chile shall accept the silver and nickel coins of legal weight in payment of any obligation without any limitation as to the amount.

ART. 18. The silver and nickel coins issued in agreement with previous laws shall remain legal tender at their face value, subject to the same conditions as govern the coins issued in virtue of the present law.

ART. 19. There shall be three types of nickel coins—20 centavos, weight 4.5 grams; 10 centavos, weight 3 grams; 5 centavos, weight 2 grams. The composition of these coins shall be 75 per cent copper and 25 per cent nickel.

The tolerance of the nickel coins shall be 0.03 for the fineness and 0.005 for the weight.

No one shall be obliged to accept more than 5 pesos in nickel coins for the payment of obligations.

ART. 20. The acceptance of any foreign money in payment of debts or other obligations, except in the case of contracts made in agreement with the law of September 10, 1892, and in which special money has been stipulated, shall cease to be obligatory after the promulgation of the present law.

ART. 21. All the obligations contracted in current money prior to the promulgation of the present law shall be met, peso for peso, in any of the moneys to

which the present law imparts legal-tender quality and in agreement with its provisions.

ART. 22. After the promulgation of this law the following laws are repealed: No. 277 of February 11, 1895, No. 3527 of August 8, 1918, No. 4014 of May 22, 1924, and the other legal provisions incompatible with the present law. On the day on which the Central Bank of Chile will open officially its offices there shall be repealed the provision contained in Law No. 3460 of December 30, 1918, which prohibits the exportation of gold.

ART. 23. The decree No. 528 of September 16, 1925, is repealed.

ART. 24. The present law shall become effective on the day of its publication.

COLOMBIA

The domestic gold coinage executed in home mints during the year ended December 31, 1926, amounted to 1,916,695 pesos (\$1,865,519).

The total import of United States gold bullion during 1926 was 2,064,077 pesos (\$2,008,966).

Gold production during 1926: 62,486 fine ounces.

MONETARY LAW OF MARCH 4, 1927

[Translation from Ecuador's Registro Oficial dated March 19, 1927]

GOLD COINS

ARTICLE 1. The monetary unit of the Republic of Ecuador shall be the sucre, which shall contain 0.300933 grams of fine gold.

ART. 2. The following gold coins, 0.900 fine, shall be minted: One condor (25 sucres) having a gross weight of 8.35925 grams and a fine weight of 7.523325 grams; 2 condors (50 sucres) having a gross weight of 16.7185 grams and a fine weight of 15.04665 grams.

ART. 3. The Central Bank, as agent for the Government, shall receive gold for coinage in sums equivalent to 10,000 condors or more at the rate of 0.300933 grams of fine gold per sucre, collecting for this service only the cost of the coinage and other necessary expenses. The Minister of Finance is authorized to recoin such part of the existing Ecuadorian gold coins as he may deem available, the expense of such coinage to be borne by the national treasury.

ART. 5. The limit of tolerance of gold coins in bulk shall be 0.001 for the fineness as well as for the weight; the limit of tolerance of individual coins shall be 32 milligrams.

ART. 6. The new gold coins shall be unlimited legal tender for all debts, unless otherwise specifically provided by contract.

ART. 7. The old gold coins shall be received in unlimited amounts by the Government at the rate of 2.43325 times their face value for all debts, taxes, and other dues, and shall be received by the Central Bank, acting as agent for the Government, in the same manner.

ART. 8. All debts and obligations contracted before the passage of the law and held by the courts to be specifically payable in foreign money are to be subject to the present provisions of the code of commerce and other laws in force.

SILVER AND MINOR COINS

ART. 11. The following silver coins, 0.720 fine, shall be minted: 2 sucres having a gross weight of 10 grams and a fine weight of 7.2 grams; 1 sucre having a gross weight of 5 grams and a fine weight of 3.6 grams; one-half sucre or 50 centavos having a gross weight of 2.5 grams and a fine weight of 1.8 grams.

ART. 13. The limit of tolerance of silver coins in bulk shall be 0.004 for the fineness and 0.003 for the weight. The limit of tolerance of individual coins shall be 135 milligrams for 2 sucres and 1 sucre and 100 milligrams for 50 centavos.

ART. 14. The minor coins of Ecuador shall be as follows: 10 centavos, weighing 4 grams; 5 centavos weighing 3 grams; $2\frac{1}{2}$ centavos weighing $2\frac{1}{2}$ grams; 1 centavo weighing $3\frac{1}{2}$ grams. The first three shall be approximately 100 per cent nickel; the 1-centavo coin shall be 95 per cent copper and 5 per cent tin and zinc.

ART. 16. Silver coins shall be legal tender in payment of all private obligations in amounts of 10 sucres or less in one payment; nickel coin shall be legal tender in amounts of 2 sucres or less; copper coins shall be legal tender in amounts of 20 centavos or less.

All silver and minor coins shall be received in unlimited amounts in payment of taxes and other Government dues.

Clipped, bored, sweated, or otherwise mutilated coins lose their legal tender capacity.

ART. 17. All Ecuadorian silver and minor coins minted in accordance with previous laws shall be legal tender at their face value under the same conditions as apply to the new coins.

ART. 18. The Central Bank, as agent of the Government, shall receive at par such old silver and minor coins as have been so worn by natural abrasion that the date and design are obliterated.

ART. 24. The executive decree of August 6, 1914, and the legislative decree of August 30, 1914, providing for a moratorium, are repealed as of the date on which

the Central Bank officially opens for business. Upon such date all obligations automatically become payable *sucre* for *sucre* in the new gold standard *sucre*.

ART. 27. All previous laws and provisions pertaining to coinage are repealed.

ART. 28. This law shall become effective on the date of its publication in the *Registro Oficial*.

Issued at Quito on March 4, 1927.

GUIANA, BRITISH

EUROPE

ALBANIA

NATIONAL BANK—CURRENCY

[From L'Economiste Européen, Paris, October 1, 1926]

The National Bank of Albania was established in 1925 by an international financial group controlled by Italian bankers. Its note circulation seems to fluctuate at present around 1,000,000 gold francs, these notes being convertible into gold on demand. The bank also issues 100-franc gold pieces, struck at Rome. The monetary system of the country has thus gold as a basis, and it could not very well be otherwise, as the people are not used to paper money. Foreign coins are also in circulation, as the greater part of the Albanian foreign trade is carried on in foreign currency.

ROYAL DECREE OF MONETARY STABILIZATION

[Decree of October 25, 1926]

We, Albert, King of the Belgians, to all present and to come, greetings:
In view of the law of July 6, 1926, relative to certain measures to be taken with a view to bettering the financial situation.

In view of the law of February 26, 1926, relative to the need of a sound fiduciary circulation and monetary stability.

On the proposal of our ministers, deliberated in council, we have decreed and do decree:

ARTICLE I. The franc is stabilized under the conditions determined by the present decree. The National Bank is charged with the operations of stabilization under the control of the Minister of Finance.

ART. II. The debts of the State to the National Bank totaling on this day Fcs.6,705,000,000 will be reduced by the operations hereinafter indicated to Fcs.2,000,000,000 maximum. This balance will be progressively amortized. It can no longer in any event be increased.

The sums drawn against the credit authorized by the law of May 19, 1926, relative to the discount of Treasury bills by the National Bank will be the first to be reimbursed.

The State will pay to the National Bank the full proceeds of the foreign loan contracted in execution of the royal decree dated to-day concerning the monetary

stabilization loan. On its side the National Bank will carry the gold, the silver, and the foreign "devisen" now carried in its reserve at its real value in francs at the rate determined by the present decree.

The increase in assets resulting from the revaluation of the metallic reserve will be credited to the State.

ART. III. In addition to the resources in gold mentioned in Article II, the bank will use the available gold "devisen" which it possesses to assure exchange stability. It will use to the same end if necessary the credits which it has directly obtained from foreign issue and reserve banks.

ART. IV. The reimbursal of the balance provided for in Article II above will be undertaken by the Fonds d'Amortissement governed by the conditions of Article VI of the law of June 7, 1926, and in agreement with the bank. It will take place concurrently with the reimbursal of the external floating debt as of to-day and of the charges which the Fonds must meet in respect to the internal floating debt.

ART. V. The bank is obliged to maintain a reserve of gold or of gold "devisen" equal to 40 per cent of its demand liabilities, of which a minimum of 30 per cent in gold.

ART. VI. The capital of the National Bank will be raised to Fcs.200,000,000.

ART. VII. The franc bank notes put out by the National Bank will continue to be legal tender.

The present decree does not nullify in any way existing laws with respect to the debt freeing power of these bank notes and of the obligation of State receivers and of individuals to receive them as legal tender, notwithstanding any convention to the contrary.

These bank notes are guaranteed by the entire reserves of the bank as constituted and increased by virtue of the present decree.

ART. VIII. The rate of the Belgian franc abroad is established in multiples of Fcs.5. The National Bank will adopt this same multiple as the basis of its reimbursals in cash which will be made at sight in gold or silver at its gold value, or in "devisen" at the choice of the bank. The multiple only is quoted in respect of exchange transactions, and bears to this end the name of "Belga." It is forbidden to publish rate of exchange of the Belgian franc under any other form.

Parity with foreign moneys is established at the rate of a weight fine gold equal to 0.209211 grammes per Belga.¹

ART. IX. If the National Bank of Belgium puts out bank notes denominated on the basis of Article VIII, they are to bear mention of their franc value. Bank notes denominated exclusively in francs are at all times interchangeable against bank notes denominated in Belga in the proportion of five to one.

ART. X. The law of January 25, 1923, is abrogated as far as concerns the export and import of "valeurs" (capital).

A royal decree will fix the date on which this provision will go into effect.

ART. XI. The law of February 26, 1926, concerning a sound currency and monetary stabilization is abrogated.

ART. XII. The present decree will go into effect the day of its publication.

ART. XIII. Our Minister of Finance is charged with the execution of the present decree, given at Brussels the 24th day of October, 1926.

(This decree is based upon first cable advice and should be considered subject to correction.)

LATIN MONETARY UNION LOSSES BELGIUM—FRENCH SEE MANY DISADVANTAGES IN STABILIZATION OF KINGDOM'S CURRENCY

[From The Commercial and Financial Chronicle, November 6, 1926]

Financiers here appear to consider the creation of the belga by Belgium as an indication that the francs of the two countries will never again be equal to each other.

One hundred French francs are worth 22 belgas, and as M. Poincare is reputed to intend to stabilize French currency only after further revalorization, it may be expected that the two countries will never have interchangeable currency again. Likewise, it is believed here that the belga at its present value will eventually become the basis of new gold currency in Belgium either as a unit or as a multiple of the gold franc. This prospect is not greeted heartily by French as a whole, industry, trade or finance, although every one is glad to see Belgium out of trouble. It is thought that Belgians themselves will regret the days when

¹ Equivalent to U. S. \$0.139045.

laborers could come to France to work and spend their earnings at home without going to exchange dealers with them.

Some sentimental resentment is felt here over the abandonment of the franc, which neighboring countries wanted to copy when France was a rich financial center before the war. People who feel this way regard the whole proposition as a victory for the pound sterling as currency and for London as the banking center and deplore the attraction which they allege has drawn Belgium westward instead of southward.

GOLD EMBARGO LIFTED

[From The Mining Journal, London, December 25, 1926]

The *Moniteur Belge* publishes a royal decree abrogating as from December 16 the law of January 25, 1923, on the import and export of gold and securities.

RETIREMENT OF FOREIGN COINS

[From *Moniteur des Intérêts Matériels*, Brussels, December 26-27, 1926]

According to the terms of the international agreement of 1885, the silver coins of the other countries belonging to the Latin Monetary Union existing in Belgium must be retired from circulation and taken back at their face value.

Consequently during the period from January 1 to September 30, 1927, the French, Greek, Italian, and Swiss silver 5-franc pieces, as well as the French and Swiss silver coins in denominations of 2 francs, 1 franc, 50 and 20 centimes, will be received in payment or exchanged for an equal amount of specie or notes having legal-tender quality in Belgium by the National Bank at Brussels or by its agencies in the provinces, as well as by the government collection.

The actual currency consists of paper leva, 541 paper leva being equivalent to 20 gold leva.

Premium on gold in 1926: 140 leva to the gold dollar. This rate was stable during the year.

The export of gold and silver is prohibited.

REORGANIZATION OF THE NATIONAL BANK OF BULGARIA

[From Federal Reserve Bank Bulletin, February, 1927]

Reorganization of the National Bank of Bulgaria was provided for in the new Bulgarian banking law of November 5, 1926, to become effective January 1, 1927. Such a reorganization was one of the preliminary conditions laid down by the League of Nations in arranging the refugee loan of £2,225,000 for Bulgaria. The National Bank was founded in 1879 as a state institution, with a capital furnished by the Government. Besides performing the functions of a central bank of issue the National Bank, in the absence of adequate commercial banking facilities throughout the country, advanced long-term credits to the state, to municipalities, and to industrial enterprises, and issued long-term mortgages. Under the new law the bank, although still a state institution, has been made autonomous.

It no longer has power to issue mortgages and to grant long-term credits, but must henceforth confine its activity to the discounting of short-term commercial bills and to performing the functions of a modern bank of issue. For this reason the National Bank will give up its participation in the Central Cooperative Bank, in the Bank for Agriculture, and in the International Bank of Bulgaria. Its mortgage and long-term investment business will be turned over to two separate institutions—namely, the mortgage bank and the industrial bank—which are to be created in the near future.

The main task of the bank, according to the new law, is to maintain the stability of the leva¹ at a fixed relation to gold, to regulate the amount of money in circulation, and to facilitate the transfer of funds by check. For the present the leva will be maintained at 0.72 cent, the point at which it has remained stable for about four years. The resumption of gold payments and the reorganization of the currency will be undertaken later. The bank is under obligation to maintain against its notes in circulation and demand deposits a cover of 33 $\frac{1}{3}$ per cent, which, however, the bank will endeavor to increase to 40 per cent. The reserves of the bank may consist of gold, silver at its current value in gold, of foreign bills of exchange carrying at least three signatures, and of foreign currencies convertible into gold.

Hitherto the National Bank of Bulgaria has been under control of the Minister of Finance. Under the new law the management of the bank is entrusted to a board of administration, consisting of a governor, two deputy governors, four members selected from among the directors of the head office, and four members representing, respectively, industry, commerce, agriculture, and banking. The governor and the two deputy governors are appointed by royal decree, but can be removed from office only by a decision of Parliament acting upon a report submitted by the Minister of Finance, to which must be attached a report of the governor and the deputy governors of the bank, stating their position. The Government is represented by a comptroller, who takes part in the meetings of the board of directors and of the executive board, but has no vote. He may veto any decision which is against the law. The balance sheets of the bank in future will not be submitted for approval to the Minister of Finance. The bank has the exclusive right to issue notes, while the State holds the right to issue subsidiary coins and to mint gold and silver, which will be convertible into bank notes at their nominal value.

Although the capital of the bank was originally furnished and recently augmented by the State and the bank continues to act as fiscal agent for the Government, the relation between the bank and the Government has been greatly restricted. The bank is authorized to discount for the Government six months' treasury bills up to the amount of 300,000,000 leva, the notes bearing an interest rate of at least 5 per cent. The capital of the bank has been increased from 500,000,000 leva to 1,000,000,000 leva. So long as the capital is not fully paid up the profits of the bank, which are usually transferred to the Government, will be retained by the bank and applied to the building up of capital. During this time the Government in liquidation of its debt to the bank is to turn over annually to the bank a sum of 150,000,000 leva, which will also be applied to capital account. After the capital of the bank has been fully paid up, the State may apply its share in the bank's profits to the payments of 150,000,000 leva, which are to continue until the debt of the State to the bank, has been fully liquidated.

The surplus of the bank is to be increased annually by 25 per cent of the net profits until the surplus reaches 100 per cent of the original capital. The board of administration may also set up other reserve funds to be built up from the net profits of the bank.

CZECHOSLOVAKIA

The domestic gold coinage executed in home mints during the year ended December 31, 1926, consisted of 58,669 ducat pieces (\$134,246).

The quantity of gold and silver produced from the mines of the country during 1926 was as follows: Gold, 240 fine kilos (7,716 ounces); silver, 23,810 fine kilos (765,491 ounces).

¹ The leva at par is worth 19.3 cents.

ESTONIAN GOLD KRONE AND GOLD BALANCE SHEET LAWS

Consul Harry E. Carlson, Tallinn, in United States Department of Commerce Reports, December 13, 1926]

On June 30, 1924, the Estonian Parliament passed a gold krone (Kroon) law, providing for the establishment of a gold-standard unit to replace the paper currency in circulation and for the conclusion of agreements in this unit. Under the new valuation 100 stable Estonian marks of the paper currency at present in circulation would be equal to 1 gold krone, containing 0.403226 gram of

pure gold. Section 5 of the law authorized the Estonian Government to issue regulations and instructions for making the legislation operative, but these have not been promulgated.

A British financial expert, at the invitation of the Estonian Government, is in Estonia to advise in regard to putting the proposed currency reform into effect. At the present moment it is not possible to state definitely the method of operation, but it is expected that within six months the reform will have been carried out, on the basis of the law of June 20, 1924.

GOLD BALANCE SHEET LAW

Partly in order to prepare the way for the use of the new gold unit, a law was passed by the Estonian Parliament on December 18, 1925, and amended on February 18, 1926, providing for the use of the new Estonian unit of currency in preparing the annual balance sheets of all commercial, financial, and industrial enterprises and cooperative societies with limited capital, as well as of all private concerns which derive or expect to derive advantages under the right and privileges accorded them under article 574 of the direct taxation law.

The gold balance sheet law made it obligatory for firms and individuals affected by it to put the requirements of the law into effect as of January 1, 1926, provided this date corresponded with their accounting years, or, if not, on the date during 1926 on which their respective accounting years closed. The law, therefore, is now in effect, and the Estonian firms coming under its provision are making all entries in their annual balance sheets in the new currency. It is said, however, that contracts, from time to time, are being made on the basis of the stable Estonian mark.

PURPOSE OF THE LAW

The actual purpose of the law is to provide a basis for revaluing all items carried in the balance sheets in any other than Estonian currency. Prior to its enactment many Estonian firms carried in their balance sheets items in depreciated Russian rubles or Ost marks. This practice caused confusion in taxation, as the Estonian Government frequently encountered difficulties in making correct tax assessments on the basis of the balance sheets as presented.

MONETARY REFORM PROJECT

[From *L'Economiste Européen*, Paris, March 25, 1927]

The project of monetary reform submitted to parliament proposes to establish a new gold coin and to revise the statutes of the Bank of Estonia. The Central Bank will have during a period of 25 years the exclusive privilege of issuing notes. The Treasury notes in circulation at present will be exchanged within two years against notes of the bank. The new monetary unit, the *esta*, will be equivalent to the Scandinavian crown, and will be divided into 100 *sajak*. The transition from the old to the new unit will be easy, as the Estonian mark has remained stable for several years at the rate of 100 marks to one Swedish crown. The Bank of Estonia will be bound to buy gold at the price of 2.46 *esta* per gram and to sell it at the price of 2.50 *esta* per gram in quantities not less than 500 grams.

[From *Moniteur des Intérêts Matériels*, Brussels, May 13-14, 1927]

The transfer of the bank notes from the Government to the Bank of Estonia has been decided, as well as the establishment of a new monetary unit, called crown, containing 100/248 gram of pure gold and divided into 100 cents, 1 cent being the equivalent of an old Estonian mark. This new crown is similar to the crown circulating in the Scandinavian countries.

FINLAND

The domestic gold coinage executed in home mints during the year ended December 31, 1926, consisted of fifty thousand five hundred 200-mark pieces, having a face value of 10,100,000 Finnish marks (\$254,520).

FINNISH CURRENCY—GOLD STANDARD WORKS SATISFACTORY

[From The Commercial and Financial Chronicle, November, 6, 1926]

The following by Frank Fox, author of the book "Finland To-day," appeared in the London Financial News of October 11, 1926:

Courage to face facts, wisdom to take good advice, prudence to practice economy—with these the Finn has made his mark good and restored the gold standard.

The Finnish mark in 1914 had the gold value of the French franc, 25 to the pound sterling. During 1914-1919 it depreciated, partly through inflation, partly through external doubt whether Finland could survive the downfall of Russia, to the value of 300 to the pound sterling. Finland, too, was left bone-poor owing to the devastation of the country by the Reds and the total loss of its chief export market, Russia.

British and American financiers, having pre-war experience of the honesty of the Finns, were generous with credits. With their help Finland set itself to put its house in order; followed the same stern path as Great Britain by levying high taxation and—improving on our example in this—insisted on rigid public economy. The country balanced its budget and met as they fell due its foreign obligations (after Great Britain it was the first country to fund its debt to the United States). By 1925 the mark had improved from 300 to the pound sterling to 193 to the pound sterling, and it was decided to stabilize and to restore the gold standard. This was on the advice of a committee (on which were represented the Bank of Finland, the joint-stock banks, and important business interests).

COMMITTEE'S RECOMMENDATION

The committee advised that no further depreciation of the mark should be allowed, and "no appreciation attempted." This second recommendation needed courage. It formally wiped out nearly seven-eighths of the nominal value of internal debts. But undoubtedly it was wise, and as matters turned out, met with no great opposition. (The loss to holders of marks was in part counterbalanced by the fall in commodity values between the time when the mark was 300 and when it was stabilized.)

The committee insisted on a cautious economic policy following the change; the continued maintenance of a balanced budget; no alterations in taxation that might prejudice production; existing Government deposits in the commercial banks to be withdrawn gradually; severe economy in State and municipal expenditures, not only for current administration, but also for productive enterprises, where the benefit was indirect or in the future (railways, harbor extensions, etc.); banks to be cautious in granting credits, particularly for new enterprises. The committee imposed one further condition, that the necessary stability had been reached in the value of gold itself, this to be when a free gold market had been restored in England.

RETURN TO GOLD

Since January, 1926, the monetary system of Finland has been founded on gold as the sole measure of value. Gold coins are struck of 100 and 200 marks, but, as is the case in our own country, are not put into general circulation. Bank of Finland notes are legal tender and are convertible on demand by the bank, either in gold coin, gold ingots, or in checks in a foreign gold-based currency.

For Finland 1926 has been a trying year. The spring came late (and the export trade has to wait until spring clears the ports of ice); then the British coal strike hit Finland hard, not only because it uses British coal chiefly in its industries and had to turn to inferior kinds, but because Great Britain, the best buyer of Finnish products, has bought less. Nevertheless, the country has seen no reason to regret the step which gave it a sound currency.

The lesson might be useful to some other European countries. When a nation inflates its currency, it is, in effect, taking a secret forced loan from the savings of its people; and if the inflation has been allowed to go beyond recoverable bounds, the only course is to confess to the thrifty that a certain proportion of their savings has been confiscated and to start afresh on a new basis.

LATIN MONETARY UNION DISSOLVED

AFTER 60 YEARS AGREEMENT AMONG FIVE EUROPEAN NATIONS IS TERMINATED WITH END OF 1926

[From The Commercial and Financial Chronicle, April 2, 1927]

The Wall Street Journal of March 28 reported the following from its Paris office:

The Latin Monetary Union definitely passed away with the end of 1926 after over 60 years of existence. In effect it had ceased to operate since the outbreak of the war, and already in 1921 the members of it—France, Italy, Belgium, Switzerland, and Greece—had signed a convention regulating the terms of its dissolution. But it was only last December that Switzerland addressed a note to her partners informing them that she would consider the union terminated both in name and fact on December 31, and, none of the partners having raised opposition, the union died on that date.

It is one of the victims of the war, which has already done so much to split Europe up into separate economic units and is now responsible for ending an arrangement which made the gold and silver pieces of five countries interchangeable.

The original treaty of 1865 made uniform the content, weight, and form of the gold and silver currencies of the four countries signing it; Greece joined the union 10 years later. Each was entitled to mint gold pieces of 100, 50, 10, and 5 francs and silver pieces of 5 francs (crowns) without limit and each undertook to accept these coins indiscriminately, so that the treaty sanctioned bimetallism. The depreciation of silver caused much difficulty from almost the outset of the union, however, and in 1879 principle of bimetallism was partly abandoned, it being agreed to stop the minting of silver coins though the coins already existing continued to rank as legal currency with gold. This system, which has been called "lame bimetallism," prevailed up to the outbreak of the war.

SWITZERLAND FLOODED BY SILVER COINS

The war witnessed the practical disappearance of all gold coins in the countries of the Latin Union and even the silver ones vanished except in Switzerland. With the depreciation of the French, Italian, Belgian, and Greek currencies after the war, Switzerland found silver crowns pouring into her territory from all sides, the tendency being accentuated by the fall in the price of silver. She had finally to prohibit the import of crowns emanating from the mints of the other partners of the union, but the crowns continued to come in secretly and finally all but Swiss crowns were declared illegal currency. That was in 1920.

After the retirement of the forbidden crowns, for which a period of three months was allowed, Switzerland found herself possessed of 225,000,000 francs in French, Italian, Belgian, and Greek silver pieces, in addition to the silver already in the national bank. What was to be done with them? The countries concerned got together in 1921 and framed a convention for the solution of the problem, which involved the ultimate termination of the Latin Union. It was arranged with France that the 130,000,000 French silver francs in the possession of Switzerland should be held until January 15, 1927, after which they would be returned in installments over a period of five years against 20,000,000 francs gold plus the balance in Swiss francs or in gold or in drafts on Switzerland. A similar arrangement was made with Italy and Belgium, except that Switzerland was given the right to melt down and transform into Swiss silver coins about half the Italian total of 65,000,000 francs and three-fourths of the Belgian total of 29,000,000. As for the Greek silver pieces, the amount was so small that it was arranged that the whole should be transformed into Swiss coins. It should be added that the purpose of one of the recent French railroad loans in Switzerland was to provide the money to carry out the Franco-Swiss arrangement.

LAST RELIC OF THE UNION DISAPPEARS

This convention left the gold pieces of the five countries legal currency in all five. It was an anomaly, as anybody who has been in Switzerland in recent years can testify.

When the Swiss National Bank began putting 20-franc gold pieces into circulation some two years ago, the recipient was obliged to pay for them, in French or Italian paper currency, at the rates of the day; but if he happened to take one of these gold coins across the frontier into France or Italy all he could obtain for it was 20 French francs paper or 20 paper lire. The gold piece which the visitor

received against 100 French paper francs might even be a French gold piece, but if he brought it back to France all he could get for it would be 20 francs paper. It was more profitable, therefore, to accept Swiss paper francs as a medium of exchange, for the French would give 100 francs French paper for 20 francs Swiss paper.

For the same reason, too, hoarders of French gold pieces kept on trying to get them into Switzerland for exchange into Swiss paper francs and later exchange into French paper francs; hence in part, the decision of the French Government, taken a few months ago, to offer to buy gold coins at their metallic and not their nominal value.

In any event, this last relic of the monetary union has now vanished. By decree of February 8 last, holders of French, Belgian, Italian, and Greek gold coins were given until March 31 to exchange them into Swiss legal currency. After that date they will be accepted only at their intrinsic value according to a tariff fixed by the National Bank (about 99 per cent). Up to 500 francs Swiss gold will be given, but above that sum only a quarter in gold. This restriction is due to the probable large quantity of foreign gold in Switzerland and the probable deteriorated state of the coins, as also to the inevitable further inflow of coin for exchange despite the Swiss prohibition on importation, and the French and Italian prohibition on exportation. The non-Swiss gold coins of the countries of the Latin Union in circulation in 1913 according to the Bulletin of the Société de Banque Suisse, amounted to 12,800,000,000 francs. What part of this sum will come into the Swiss National Bank for exchange?

In any case, Switzerland is bound to suffer loss by the transaction, for the coins accepted at nominal value can be valorized only at their intrinsic metallic value by sale of the gold they contain or by reminting into Swiss coin. The Bank of Switzerland had in its coffers at the end of last year 95,500,000 francs in non-Swiss Latin Union gold coin and through loss of weight alone the loss on this sum is calculated at 244,000 francs Swiss.

The reward, however, comes in the fact that Switzerland will again come into complete control of her currency. It remains to be seen whether she will take the opportunity to adopt definitely and completely the gold standard.

GERMANY

Domestic silver coinage executed in home mints during the year ended December 31, 1926

SILVER COIN IN CIRCULATION

[From weekly bullion circular of Samuel Montague & Co., London, May 4, 1927]

In reply to a question in the House of Commons on the 28th ultimo, Mr. Churchill stated that about £27,000,000 in silver coins of 0.500 fineness was actually in circulation in this country. The amount of silver coin of 0.925 fineness still in circulation was estimated at from £20,000,000 to £25,000,000. The whole of the silver coinage was being steadily converted to 0.500 fineness in the interests of economy, and more than half has been so converted, but it was unnecessary and uneconomical to force the pace. So far as he was aware, no inconvenience was caused to anyone by silver coin circulating concurrently in different degree of fineness.

EFFECT OF ENGLAND'S RESTORATION OF GOLD STANDARD

[Bullion circular of Samuel Montagu & Co., April 28, 1926]

On this day 12 months ago a general license was granted by the Treasury to the Bank of England for the export of gold from its coffers, at the same time fixing the coinage price of gold (77s. 10½d. per standard ounce) as the figure at which it was bound to sell gold against legal tender. This was a preliminary to the removal of the restrictions upon gold exports, which expired at the close of last year. The year that has elapsed has shown the powerful financial position occupied by this country.

We specify from week to week the effect which the reopening of the gold market has had upon the Bank of England reserves. Though a net withdrawal of £9,650,000 has taken place during the year, this movement is trifling compared with the substantial advantages that have accrued. London has again proved to be the center for financing the commerce of countries oversea. International trade bills again flow to London for finance, as was the custom before the Great War.

Whether the reduction in the number of unemployed and the improvement in trade, reported in certain quarters, can be attributed to this cause may not be clear, but there is no doubt that the reduction of 14 per cent in the price level has been much assisted by the restoration of sterling to the gold level; moreover, the grievance held in India that the relation of the rupee was to sterling and not gold has lost weight.

The action of returning to an effective gold standard conveyed other implications to the world. It showed the deliberate intention of Great Britain to return, notwithstanding the cost involved, to the only known system of safe currency which can restore confidence to commerce and offer a sure foothold for the discharge of financial obligations as between nations.

NEW CURRENCY PLACED IN CIRCULATION

[From The Commercial and Financial Chronicle, New York, January 1, 1927]

The pengos, Hungary's new gold standard currency unit, has been placed in circulation. The pengos are divided into 100 fillers, the coins issued being the silver pengos, copper 1 and 2 filler pieces and nickel 10 and 20 filler units. These are the first metallic Hungarian coins seen in 10 years.

Bank notes of 5, 10, 25, 100, and 1,000 pengos also have been issued. The pengos and the filler are the names of ancient Magyar coins.

The pengos are obligatory after New Year's Day. The paper crowns are allowed to continue in circulation until June 30. Thereafter they will be converted by the National Bank until 1930, when they lose all value.

ICELAND

The estimated quantity of gold and silver used in the industrial arts during 1926 was as follows: Gold, 3 kilos (96 ounces); silver, 250 kilos (8,037 ounces).

LAWS AFFECTING THE CURRENCY AND BANKING

By act No. 4, of March 1, 1926, the Icelandic Government is authorized to join the supplementary convention of the Scandinavian Monetary Union.

The bill on Iceland's "Landsbank," hereafter to bear the name "Islands Nationalbank," was passed on May 18, 1926, by both chambers of the Acting (Iceland's legislature). The most important provision of the new law is that the right of issuing bank notes is transferred to the Landsbank, the position of which will correspond to that of a central bank. This bank was established in 1885. By a law dated May 4, 1922, the note issue of the bank was increased considerably, so that about one year ago it had a circulation of nearly 5,000,000 crowns. The other banking institution of Iceland is "Islands Bank," which up to the present had charge of the regular issuance of bank notes.

The estimated quantity of gold and silver used in the industrial arts during 1925 was as follows: Gold, 3 kilos (96 ounces); silver, 250 kilos (8,037 ounces).

IRISH FREE STATE

Approximate stock of silver coin and paper money in circulation on December 31, 1926: Silver coin, £2,000,000 (\$9,733,000); government notes, between £1,000,000 and £2,000,000; notes of banks of issue, £14,248,394.

Imports of silver coin from Great Britain during 1926, £8,800 (\$42,825).

CURRENCY

Under the currency act of 1927, a currency commission is being set up which will issue two kinds of notes, a series of legal tender notes and a series of consolidated bank notes. It is not expected that these issues will be made until 1928.

There is likewise in preparation a new Free State coinage. It is not expected that Free State gold coins will be issued. The currency act provides for the use of the existing British unit, and its currency is intended to circulate absolutely on par with the British.

SUMMARY OF IRISH CURRENCY PROPOSALS

[From the Statist, January 29, 1927]

The present currency of the Irish Free State consists of bank notes, issued in effect by five banks, and British currency notes. The total circulation of all Ireland is estimated at £17,000,000, of which about £3,000,000 consists of till money and British currency notes. The bank note issue is fiduciary up to a combined maximum of £6,354,494, and all notes in excess of that figure have to be backed pound for pound by British currency notes. The total amount of British currency notes in Ireland is estimated at approximately £10,000,000, i. e., £8,000,000 as backing for the bank notes and £2,000,000 in circulation. This sum represents the extent of the power of obtaining gold from London, should it be decided to work an independent gold standard, but the commission has decided against the venture.

British sterling legal tender is adopted as the standard of value in the Free State, and the proposed currency commission can issue legal tender notes only against British sterling (after a transition period) on a pound-for-pound basis. The Saorstat legal-tender notes will be guaranteed unconditionally by the Free State Government and will be convertible into sterling at par. Holders, however, can convert as a legal right only in London. The commission will invest the sterling obtained against Saorstat notes in British Government securities, apart, of course, from the liquid balance required for conversion purposes. A conversion agent—a bank or a group of banks—will be appointed in London. It is recommended that the total of legal tender notes on issue should not exceed the present amount of secured bank notes plus British currency notes in circulation. Thus, on the estimates given above, the total of legal tender notes should be less than £10,000,000, this figure being applicable to the whole of Ireland; the commission tentatively suggest £6,000,000. The report is not quite clear whether the suggested limit for the issue of legal tender notes is compulsory, though the commission will be subject to a “general instruction” not to exceed “the present secured issue (of bank notes) plus British currency notes in circulation in the Saorstat.” Elsewhere in the report an exception is made in favor of 10-shilling notes.

The nonlegal-tender “Consolidated bank notes issue” may be obtained by all banks in the Free State on transferring to the currency commission satisfactory securities in the shape of bills of exchange, or contract obligations representing liquid sound advances to their customers. The notes will bear the name of the bank to which they are issued. They will be the liability of the currency commission, but only up to the realizable value of the assets of the bank to which they have been supplied in each case. They will be convertible on demand into legal tender notes—but as a legal right only at the local head offices of the banks. The maximum issue of consolidated bank notes is fixed at £6,000,000, this figure to be reconsidered at the end of two years, and every three years thereafter. It is provided, however, that if at the end of any one-half year the legal tender issue is less than £4,000,000, the bank-note issue shall be limited to not more than £1,000,000 in excess of the legal-tender issue. On the other hand, any bank may, by unanimous vote of the commissioners, obtain an “extraordinary” issue of bank notes up to the amount of its reserved capital. Such issues are to carry the same security and liability as ordinary issues; they are to be subject to a tax of not less than 5 per cent, and must be retired within 12 months. The maximum of £6,000,000 is divided among the banks as follows: Bank of Ireland, £1,705,000; National, £1,365,000; Northern, £243,000; Provincial, £649,000; Ulster, £419,000; Hibernian, £439,000; Munster and Leinster, £852,000; National Land Bank, £55,000; Royal, £273,000. Presumably the share of the National Land Bank now goes to the Bank of Ireland. From the proceeds of this tax, together with the profits of the legal-tender issue, the currency commission is to build up a reserve equal to 10 per cent of the outstanding Saorstat notes as a provision against depreciation of investments and as additional security for the bank notes.

UNIFYING ITALY'S NOTE ISSUE

[From Bankers' Magazine, London, June, 1926]

Steps are being taken by the Italian Government to restrict powers of note issue to the Banca d'Italia as from July 1, 1926. Up to the present time there have been three banks in Italy which have possessed such powers, the other two being the Banco di Napoli and the Banco di Sicilia. It is proposed to transfer the cover for the issues of these banks, consisting of gold securities, to the Banca d'Italia at the end of the current month. Meanwhile, that institution will replace all notes in circulation other than its own by a specially printed issue.

Exports of gold coin, bullion, and ore to Germany during 1926: 2,000 litas (\$200).

LUXEMBURG

CURRENCY STABILIZATION IN LUXEMBURG

[From the Statist, London, September 11, 1926]

The Grand Duchy of Luxemburg, which in matters economic has, since the end of the war, been considered to be almost a Province of Belgium, has in recent weeks been showing signs of its independence. The economic union with Belgium has, on the whole, been a very real advantage to both countries concerned—the abolition of customs barriers is a case in point—but in other respects the close economic ties that bind the two neighbors have been undoubtedly detrimental to the interests of Luxemburg. Particularly has this been the case in the matter of the interchangeability of the currencies. Luxemburg has, in fact, lost its right

to an independent currency, and the Belgian franc circulates freely. The fluctuation of the Belgian currency, due to causes of which Luxemburg itself has been wholly innocent, has brought in its train many inconveniences, serious losses, and naturally enough a certain sense of injury and resentment. The Luxemburg Government, taking their courage in both hands, have recently decided to make an end of the domination of the franc over the economic life of their country. Although they have not abolished the circulation of francs, they have introduced the pound sterling as the real standard of value of the country. All contracts in francs entered into on or before August 27 will have to be satisfied on the basis of a rate of 177.15 francs to the pound. For subsequent contracts the basic rate will be the middle rate of the day on which the contract is entered into. Thus, if a merchant buys goods of a value of 17,500 francs payable three months hence—the middle rate of the Belgian franc on the date of the purchase being 175 francs to the pound—and discharges his debt on a day when the franc is quoted at 200 to the pound, he will be called upon to pay not 17,500 but 20,000 francs. Although, therefore, the franc remains the medium of exchange, the standard of value is now the pound sterling. Certain exceptions had, of course, to be made to the hard and fast rule that all franc contracts entered into before August 27 had to be settled on the basis of the arbitrary exchange rate of 177.15. Banks and other credit institutions have been excused from this obligation in respect of their liabilities of less than three months' currency. Luxemburg has not reestablished a gold-standard currency, but it has taken a most important step in this direction. Henceforth the habit of calculating prices and wages in terms of sterling will spread, and the adjustment to a gold-standard currency will thus tend to be made before such a currency is actually introduced. The action of Luxemburg will probably encourage in Belgium the establishment of long-term contracts in stable currencies.

MALTA

SILVER PRODUCTION

[From official questionnaire. By courtesy United States Bureau of Mines]

In 1926 the silver production of Poland was 8,451 fine kilograms.

POLAND TAKES STEP TO STABILIZE MONEY

[From the Commercial and Financial Chronicle, New York, August 21, 1926]

The program to prevent inflation proposed by the Kemmerer Commission was tentatively adopted by the Bank of Poland's advisory stockholders board on August 14. * * * The principal measure of the Kemmerer scheme declares that the 30 per cent gold reserve now maintained is larger than necessary and that the bank council be authorized to change its charter to decrease the amount in any emergency, with the permission of the Minister of Finance. In such a case, however, the bank must pay the special tax on newly issued notes, this being progressive from 5 per cent. The discount rate would rise as a result, penalizing

the bank in the first instance for its decision to increase the issue. Falling upon the creditors ultimately, the system is deemed as incentive to closer cooperation between the commercial public and the bank, leading to economy in the use of domestic currency as well as to increased transactions in foreign currency, thus stabilizing the Polish zloty. Further, the bank is to be authorized to increase its capital from 100,000,000 to 150,000,000 zloties when conditions warrant, the Government, however, retaining at least 50 per cent of the stock of the national institution. The shareholders are also to be asked to vote the right of the Polish Bank to acquire stock in a new institution called the Bank of Export Credits, which includes such enterprises as the jointly controlled grain elevators, stockyards, and packing plants.

MONETARY CHANGES

[From *L'Economiste Européen*, Paris, December 31, 1926]

The Spanish Government has begun the manufacture of new 50-centimo silver coins, weighing 2.5 grams and 18 millimeters in diameter. When this issue is completed the Government will proceed to the manufacture of 25-centimo pieces in nickel-bronze. It is also said that the Government will retire the 10 and 15 centimo copper coins, which are heavy and will replace them by smaller nickel-bronze coins of the same denomination.

DENUNCIATION OF THE LATIN MONETARY UNION

[From the report of the Swiss Federal Council for 1926]

Belgium denounced at the end of December, 1925, the monetary convention of November 6, 1885, the denunciation to become effective January 1, 1927. By decree of December 13, 1926, the Federal Council decided that in consequence of this denunciation the Latin Union ought to be regarded as virtually gone out of existence. We advised the other members of the Union, that is, France, Greece, and Italy, of our manner of regarding this question, and none raised any objection. Thus Switzerland regained her full liberty of action in monetary matters. In this regard our legislation is obsolete, and it is imperative that it be revised. The Federal Council will charge the Finance Department to undertake the preparatory work in collaboration with the National Bank.

CIRCULATION OF BELGIAN, FRENCH, GREEK, AND ITALIAN GOLD COINS TO CEASE
APRIL 1, 1927

[From Moniteur des Intérêts Matériels, Brussels, February 16, 1927]

The Belgian, French, Greek, and Italian gold coin will cease to be legal tender on April 1, 1927, but will continue to be accepted at their face value by the public treasuries until March 31, 1927, after which date they will be accepted according to their intrinsic value at a rate established by the National Bank (99 per cent at present).

TURKEY

[From Fifty-sixth Annual Report of the Deputy Master of the Royal British Mint]

The domestic gold coinage executed in home mints during 1925 consisted of sixty 5-pound pieces, valued at 300 Turkish pounds (\$1,319).

The quantity of gold and silver extracted abroad from the copper ores of the country during 1926 is estimated as follows: Gold, 323 fine kilos (10,384 ounces); silver, 1,400 fine kilos (45,010 ounces).

Metallic stock and note circulation of the National Bank on December 31, 1926: Gold at home, 86,113,383 gold dinars (\$16,619,863); gold held abroad, 58,636,000 gold dinars (\$11,316,748); silver, 17,513,273 gold dinars (\$3,380,062); Government notes, 1,547,509,280 dinars; National Bank dinar notes, 4,225,510,170 dinars; National Bank dinar-crown notes, 38,823,800 dinars; total note circulation, 5,811,843,250 dinars.

Premium on gold in 1926: Highest, 1,098 per cent; lowest, 1,092 per cent; average, 1,095 per cent.

CURRENCY

The coins of Serbia have not changed since the war and are now legal tender throughout the Kingdom. There are no gold or silver coins in general circulation at present. Fractional currency of copper-nickel, in denominations of 2, 1, and one-half dinar, was put into circulation by the Ministry of Finance in 1925 to the amount of 200,000,000 dinars. All other currency in circulation is paper (dinar bank notes), the denominations being 25 paras ($\frac{1}{4}$ dinar), 50 paras, 1 dinar, 5 dinars, 10 dinars, 100 dinars, and 1,000 dinars.

ASIA

AFGHANISTAN

NEW COINAGE

[From Consul E. Verne Richardson, Karachi, India, April 22, 1927]

On March 22, 1926, a new metallic currency was established, consisting of gold, silver, and copper coins. Of the first of these there are but two—the amani, weighing 6 grams and worth 20 afghani, and the nim (half) amani, weighing 3 grams and equivalent to 10 afghani. Of the new silver coins there are three. The largest is the yak (one) afghani weighing 10 grams and worth 100 pul. The pul is the smallest monetary unit in Afghanistan and may be considered as worth about one-fourth of a cent, United States gold. The nim (half) afghani weighs 5 grams and is worth 50 pul, and the 20-pul piece weighs 2 grams. The copper coins consist of 10, 5, and 2 pul pieces, weighing 6, 3, and 2 grams, respectively. These coins are minted in Kabul. They are not yet in universal circulation, but the old coinage is being withdrawn as rapidly as might be expected in a country of such primitive facilities for intercommunication. Much of the gold used is recovered in Afghanistan; the silver comes chiefly from India.

ARABIA

SILVER COIN IN CIRCULATION

According to Commerce Reports of May 3, 1926, the rupee coin circulation of India is estimated as approximately equivalent to \$1,300,000,000.

INDIAN CURRENCY REPORT—PROPOSED RESERVE BANK

[From The Commercial and Financial Chronicle, August 21, 1926]

The report of the Royal Commission on Indian Currency and Finance was issued last evening. Including a lengthy Minute of Dissent, the report in book form runs into 144 pages and covers all aspects of the situation:

SUMMARY OF RECOMMENDATIONS

1. The ordinary medium of circulation should remain the currency note and the silver rupee, and the stability of the currency in terms of gold should be secured by making the currency directly convertible into gold, but gold should not circulate as money.

2. The necessity of unity of policy in the control of currency and credit for the the achievement of monetary stability involves the establishment of a central banking system.

3. The central banking functions should be entrusted to a new organization, referred to as the Reserve Bank.

4. Detailed recommendations are made as to the constitution and functions and capacities of the bank.

5. The outlines of a proposed charter are recommended to give effect to the recommendations which concern the Reserve Bank.

6. Subject to the payment of limited dividends and the building up of suitable reserve funds, the balance of the profits of the Reserve Bank should be paid over to the Government.

7. The bank should be given the sole right of note issue for a period of, say, 25 years. Not later than five years from the date of the charter becoming operative, Government notes should cease to be legal tender except at Government treasuries.

BANK NOTES

8. The notes of the bank should be full legal tender, and should be guaranteed by Government. The form and material of the notes should be subject to the

approval of the Governor General in council. A suggestion is made as to the form of the note.

9. An obligation should be imposed by statute on the bank to buy and sell gold without limit at rates determined with reference to a fixed gold parity of the rupee, but in quantities of not less than 400 fine ounces, no limitation being imposed as to the purpose for which the gold is required.

10. The conditions which are to govern the sale of gold by the bank should be so framed as to free it in normal circumstances from the task of supplying gold for nonmonetary purposes. The method by which this may be secured is suggested.

11. The legal tender quality of the sovereign and the half-sovereign should be removed.

12. Government should offer "on tap" savings certificates redeemable in three or five years in legal tender money or gold at the option of the holder.

13. The paper currency should cease to be convertible by law into silver coin. It should, however, be the duty of the bank to maintain the free interchangeability of the different forms of legal tender currency, and of the Government to supply coin to the bank on demand.

14. One-rupee notes should be reintroduced and should be full legal tender.

15. Notes other than the 1-rupee note should be legally convertible into legal tender money; i. e., into notes of smaller denominations or silver rupees at the option of the currency authority.

THE SILVER RUPEE

16. No change should be made in the legal tender character of the silver rupee.

17. The paper currency and gold standard reserves should be amalgamated, and the proportions and composition of the combined reserve should be fixed by statute.

18. The proportional reserve system should be adopted. Gold and gold securities should form not less than 40 per cent of the reserve, subject to a possible temporary reduction, with the consent of Government, on payment of a tax. The currency authority should strive to work to a reserve ratio of 50 to 60 per cent.

The gold holding should be raised to 20 per cent of the reserve as soon as possible and to 25 per cent within 10 years. During this period no favorable opportunity of fortifying the gold holding in the reserve should be allowed to escape. Of the gold holding at least one-half should be held in India.

19. The silver holding in the reserve should be very substantially reduced during a transitional period of 10 years.

21. A figure of Rs. 50 crores has been fixed as the liability in respect of the contractibility of the rupee circulation. Recommendations are made to secure that an amount equal to one-fifth of the face value of any increase or decrease in the number of silver rupees in issue shall be added to or subtracted from this liability, and the balance of profit or loss shall accrue to or be borne by the Government revenues. (Pars. 42, 120-123, 146-148.)

STATE REMITTANCES

23. The Reserve Bank should be entrusted with all the remittance operations of the Government. The Secretary of State should furnish in advance periodical information as to his requirements. The bank should be left free, at its discretion, to employ such method or methods of remittance as it may find conducive to smooth working.

24. During the transition period the Government should publish a weekly return of remittances made. A trial should be made of the system of purchase by public tender in India.

25. The cash balances of the Government (including any balances of the Government of India and of the Secretary of State outside India), as well as the banking reserves in India of all banks operating in India, should be centralized in the hands of the Reserve Bank. Section 23 of the Government of India Act should be amended accordingly.

26. The transfer of reserve assets should take place not later than January 1, 1929, and the bank's obligations to buy and sell gold should come into operation not later than January 1, 1931.

TRANSITION PERIOD

27. During the transition period the currency authority—i. e., the Government until the transfer of reserve assets, and the bank thereafter—should be under an obligation to buy gold and to sell gold or gold exchange at its option at the gold

points of the exchange. This obligation should be embodied in statutory form, of which the outline is suggested.

28. Stabilization of the rupee should be effected forthwith at a rate corresponding to an exchange rate of 1s. 6d.

HANKOW

The domestic silver coinage executed at the Wuchang Mint during 1926 consisted of 3,000,000 Mexican dollar pieces (\$1,481,993).

Approximate stock of silver and bank notes used for monetary purposes on December 31, 1926: Silver coin in banks and in circulation, 6,000,000 taels (\$4,215,600) and 10,000,000 Mexican dollars (\$4,940,000); silver bullion in banks, 1,000,000 Mexican dollars (\$494,000); notes of foreign banks, 1,100,000 Mexican dollars (1,122,378 Yuan dollars); notes of native banks, 45,000,000 Mexican dollars (45,915,480 Yuan dollars).

Imports of silver from Shanghai during 1926: 14,000,000 Mexican dollars (\$6,916,000).

Exports of silver to Shanghai during 1926: 1,900,000 Mexican dollars (\$938,600).

HARBIN

The import of silver during 1926 was about 250,000 ounces. There is an embargo on silver exportation.

HONG KONG COLONY

Approximate stock of silver coin and bank notes used for monetary purposes on December 31, 1926: Silver coin held under Treasury control against bank-note issue, 39,880,000 Hong Kong dollars (\$19,556,753); notes of banks of issue in circulation, 68,185,751 Hong Kong dollars (equivalent to 69,204,446 Yuan dollars).

MUKDEN

The domestic silver coinage executed in home mints during the year ended December 31, 1926, consisted of 9,800,000 Yuan dollar coins (\$4,735,066).

The estimated quantity of new gold and silver bullion used in the industrial arts during 1926 was as follows: Gold, 70,000 Chinese ounces (93,333 troy ounces); silver, 250,000 Chinese ounces (333,333 troy ounces).

Approximate stock of silver coin and paper money in circulation on December 31, 1926: Silver coin, 50,000,000 Yuan dollars (\$24,158,500); Government and bank notes, between 700,000,000 and 800,000,000 fengpiao dollars (equivalent to 184,450,566–210,803,689 Yuan dollars); gold yen notes, 50,000,000 Yuan dollars.

Currency conditions in Yunnan Province

[By Consul M. S. Myers. In Commerce Reports, December 6, 1926]

The depreciation of Yunnan currency, which has been going on for more than a decade, reached a serious point as early as December, 1924, but continued without interruption until May, 1926.

Three banks in this Province have notes in circulation. The Futien (provincial) Bank had a note issue at the end of June, 1926, amounting to 38,000,000 paper Yunnan dollars. The note issues of the two other banks (the Joint Government and Commercial Bank of Territorial Development of Yunnan, at Yunnanfu, and the Kopi Railway Bank, at Kochiu) are given as 1,000,000 dollars each. They circulate only in the immediate vicinity and will be entirely withdrawn within the next four years.

Heretofore the government endeavored by proclamation to maintain silver and paper at a parity. The result was that the dearer money disappeared. The government soon recognized, however, that silver was required for use; and it started on September 8, 1926, to exchange silver coins for paper at the rate of 1 silver dollar for 1.98 paper dollars. Since then the rate has been gradually dropped to 1.76, the intention being to continue the reduction of the disparity between the two currencies.

A proposal to withdraw and destroy all the Futien bank notes issued against government securities has been adopted, the retirement to begin August 1, 1926, and to be accomplished in two years. The first batch of notes, amounting to 316,058 Yunnan dollars, was burned on September 10, 1926. The effect of this deflation measure is seen in the quotation in September of Yunnan paper at about 2.18 to the Hong Kong dollar. It is predicted that the rate will reach two to one before the end of the year.

IRAQ**CURRENCY**

[From bullion circular of Samuel Montagu & Co., London, November 3, 1926]

According to the Bagdad correspondent of the Times, the Government of Iraq intends to submit proposals to the Chamber of Deputies for the establishment of a national Iraqi currency and note issue to take the place of the rupee currency now in use. The standard unit of the new currency will be the gold dinar,

equivalent in value to half of the pound sterling, and the issue will be made by a Currency Board established by act of the Iraqi Parliament. It is further stated that in order to prevent any depreciation of the new notes by their over-issue, they will be issued only in exchange for rupees withdrawn from circulation, and the necessary purchases of sterling will be made with the money thus withdrawn.

JAPAN, INCLUDING CHOSEN, TAIWAN AND KWANTUNG

The domestic silver coinage executed in home mints during the year ended December 31, 1926, consisted of 32,572,000 50-sen pieces, having a face value of 16,286,000 yen (\$8,118,571).

CURRENCY REFORM IN PALESTINE—DETACHMENT FROM EGYPTIAN SYSTEM

[From the Commercial and Financial Chronicle, November 6, 1926]

The following is from the London Financial News of October 11, 1926: "The announcement of the establishment of a Palestine Currency Board on September 1 last was the first definite step toward the creation of an independent Palestine currency. The Egyptian pound, which was introduced into the country after its occupation by the British Army, served well, on the whole, as a temporary means of payment, but its use had its obvious drawbacks. It has been a general desire of the population to have it replaced by a national currency corresponding to the country's individual requirements. In 1923 a currency commission was appointed, which submitted its report in June, 1924, recommended the introduction of a unit equal to one-tenth of the pound, to be issued by an office to be created in Jerusalem. "Only some of the recommendations have been adopted by the Colonial Office. It has been decided that the headquarters of the currency board should be established in London, and that it should have a representative in Palestine. As to the unit, it was considered advisable to adopt the pound; but, in order to satisfy the demand for smaller units, the Palestine pound (whose name will be 'dinar') will be subdivided into 10 'shekels,' each of which will be in turn subdivided into 100 'pruthoth.'

"MAIN POINTS OF REGULATIONS"

"The main provisions of the regulations of the currency board are the following:

"The Palestine Currency Board has been constituted to provide for and to control the supply of currency to Palestine, to insure that the currency is maintained in satisfactory condition, and generally to watch over the interests of Palestine so far as currency is concerned. The members of the board are appointed by the Secretary of State for India. The board will have the power to appoint officers both in the United Kingdom and in Palestine.

"The board will have authority to make arrangements for minting any special coins authorized for circulation in Palestine. It may issue and reissue in Palestine currency notes, subject to the regulations and of any legislation from time to time in force in Palestine.

"The board may charge a premium on transfers of funds from Palestine to London, or vice versa, not exceeding 1 per cent. It will have the power to fix the denomination of the currency notes.

"GILT-EDGED SECURITY"

"The board may invest its funds in government securities, or in securities of any British dominion, or in such other manner as the Secretary of State may approve. The extent to which investments may be made will be left to the discretion of the board, whose duty it will be to hold a proportion of its reserve in liquid form. It will issue half-yearly returns in the Official Gazette of the Government of Palestine, showing the amount of currency notes and coins in circulation, the total amount of the currency reserve fund, and the nominal value, purchase price, and latest market price of the securities forming part of the reserve fund.

"When the board is satisfied that its reserves are more than sufficient to insure the convertibility of the currency, and to provide a reasonable reserve against a possible depreciation of its investments, it may pay over, with the approval of the Secretary of State, the whole or part of the surplus in aid of the revenues of Palestine.

"With the exception of the location of the headquarters of the board, and of the determination of the unit, as well as of some minor points, the reform will follow fairly closely the recommendations of the currency committee.

"TRANSITORY MEASURES"

"The board is authorized to raise a loan to meet its requirements in connection with the introduction of the new currency. It will probably assume the shape of a short-term credit which will be repaid as soon as the Egyptian notes are withdrawn from circulation. The transition from the existing system to the new one is expected to meet with no difficulties, although the difference of $2\frac{1}{2}$ per cent between the pound sterling and the Egyptian pound may complicate the exchange.

"There is no material difference between the new currency and the old one, for the notes of the National Bank of Egypt are covered by British securities, so that they are ultimately based on sterling.

"A section of the Palestine press criticizes the reform scheme on the ground that it reduces the country's status from a monetary point of view to that of a Crown colony. In business quarters, however, the view is held that the details of the scheme matter little so long as it secures a stable currency. An article appearing in the Palestine and Near East Economic Magazine states that 'there is every reason to believe that the high officials of the Colonial Office and the Treasury who form the currency board are honest, cautious, and expert administrators, who know their business. And this is, after all, the first thing required from those who are to manage the currency.'"

PHILIPPINE ISLANDS

The amount of United States gold coin withdrawn from circulation for industrial use during 1926 was \$300.

The total import of United States gold coin during 1926 was 778,150 pesos (\$389,075).

STRAITS SETTLEMENTS CURRENCY

(By Consul General Addison E. Southard, Singapore)

[From Commerce Reports, April 11, 1927]

The Straits Settlements currency unit is the dollar, which varies but slightly from an exchange value of \$0.57. The Straits dollar has 100 cents, paper or silver. Most of the silver dollars are held in the currency reserve, as notes are more popular for actual circulation. Government paper money was first issued in the Straits Settlements in 1901. It has become so popular that there was distinct public objection to a recent decision of the currency commissioners to cease issuance of the subsidiary paper, particularly of the 10-cent notes, which were first used during the war.

Local banks (mainly the Hong Kong and Shanghai Banking Corporation and the Chartered Bank of India, Australia, and China) in the past have issued considerable amounts in paper money, against reserves deposited with the Government. Their present circulation totals less than 200,000 Straits dollars.

CURRENCY CONTROL VESTED IN A BOARD

Control of the currency of the colony is vested in a body known as the board of commissioners of currency, which is composed of three members—the two officers discharging the duties of colonial secretary and colonial treasurer, respectively, and one other person nominated by the Governor of the Straits Settlements. This board is authorized to provide, issue, and reissue currency notes in exchange for current coin, for subsidiary coins, or for notes issued prior to the ordinance of 1923, which established it. The board also buys and sells sterling on London warrant, the portion of the currency guaranty fund held by the Crown agents in England.

CURRENCY GUARANTY FUND, LIQUID PORTION

The currency guaranty fund naturally consists of the current coin and sterling received by the currency commissioners in exchange for the notes they issued and of the various profits resulting from interest returns on investments, exchange, and coinage. This guaranty fund must be so kept that there shall be always in liquid form an amount to two-fifths of the amount of the notes in circulation. Of this liquid portion of the fund the commissioners are required to have on hand, in silver current coin of the colony, an amount equal to one-tenth of the note circulation. The balance of the liquid portion (two-fifths) of the fund may be kept in London in the custody of the Crown agents, in current gold coin, on deposit at the Bank of England, or in treasury bills; also it may be lent out on call at such banks or on such short loans or other realizable securities as may be approved by the British Secretary of State for Colonies.

CURRENCY GUARANTY FUND—INVESTMENT PORTION

The remaining three-fifths of the total guaranty fund may be invested by the commissioners in certain approved securities, including those of the United Kingdom, India, and the British Dominions and Colonies in general. Not more than one-fourth of this portion of the fund may be invested in securities of the government of the Straits Settlements. These investments provide a substantial income, which is paid into the general currency guaranty fund.

If depreciation in these investments should reduce the total value of the guaranty fund below the value of the note circulation, the deficit would be met by an appropriation from the general revenue of the Colony. Necessity for such action, however, is most remote, as the fund shows a tremendous surplus. The law, on the other hand, provides for transferring to the general revenue fund of the Colony such part of the currency guaranty surplus as may be considered available.

A STERLING EXCHANGE STANDARD ESTABLISHED

As a result of conditions developed during the war, the currency of the Straits Settlements was changed from what amounted to a theoretical gold-standard exchange to what is now designated as a sterling exchange standard on the basis of 60 Straits dollars to 7 sovereigns. The change of standard was made at a time during the World War when the gold sovereign rose to a value of about 30s. sterling and when war risks amounting to 15 per cent would have been involved by shipping gold between London and Singapore. To have followed gold throughout this period would have resulted in a value of about 4s. sterling for the Straits dollar, or a possible maximum variation of 75 per cent, which would have paralyzed business. As a result of the change to a sterling standard, the Straits Settlements was the only country which during the war did not vary the limits of its exchange on London. Under the sterling standard the margin of fluctuation is about half of an English penny, which is notable stability in this part of the country.

CURRENCY GUARANTY FUND SURPLUS IS VERY LARGE

The Straits Settlements system of handling its currency not only has established a high degree of stability and confidence but has also accumulated a remarkable surplus in the currency guaranty fund. On October 1, 1926, the currency commissioners had assets worth 200,570,290 Straits dollars to cover a note circulation of 163,361,414 dollars. This remarkably strong position enabled the governor of the Colony recently to recommend to the British Colonial Secretary that 20,000,000 dollars of the currency guaranty fund surplus be transferred to the general revenue of the Colony for a special purpose.

ABYSSINIA

The domestic silver coinage executed at the Paris mint for Abyssinia during the year ended December 31, 1926, consisted of 13,000,000 piaster pieces having a face value of 812,500 menelik dollars (\$384,150).

Amount of notes of banks of issue used for monetary purposes on December 31, 1926: In home banks, 66,715 menelik dollars; in circulation, 433,285 menelik dollars; total, 500,000.

Imports of silver coins from Austria during 1926: 2,750,000 Maria Theresia thalers (\$1,300,200).

ALGERIA

The estimated quantity of gold and silver used in the industrial arts during the year ended December 31, 1926, was as follows: Gold, 591.4 fine kilos (19,013 ounces); silver, 6,606.6 fine kilos (212,402 ounces).

Stock of gold and silver coin, and note circulation, of the Bank of Algeria on December 31, 1926: Gold and silver coin, 86,500,199 francs (\$16,694,538); Bank of Algeria notes, 1,612,300,900 francs.

Price of gold in 1926: Highest, 34.40 francs per kilo (0.1 fine); lowest, 16.50; average, 25.45.

Imports of silver bullion from Switzerland during 1926: 70 kilos (2,250 ounces).

Exports of silver bullion to France during 1926: 2,130 kilos (68,479 ounces).

SILVER PRODUCTION

The quantity of silver contained in the argentiferous lead and zinc ores extracted during 1926 is estimated at 3,138 kilos. (From official questionnaire. Courtesy United States Bureau of Mines.)

BELGIAN CONGO

The quantity of gold produced from deep mines and exported to Belgium during the year 1926 was 4,112 fine kilos (132,201 ounces).

The amount of notes of the Bank of Belgian Congo in circulation on November 30, 1926, was 93,766,000 francs.

Price of gold in 1926: Highest, 28.15 francs per gram; lowest, 15.80; average, 20.67.

The law of December 22, 1925, creating the Bank of Madagascar was largely put into effect.

Imports of gold coin during 1926: From Union of South Africa, 76,928 francs (\$14,847); from Zanzibar, 72,000 francs (\$13,896).

Exports of gold and silver to France during 1926: Gold bullion, 3,876,650 francs (\$748,193); silver coin, 700,210 francs (\$135,140).

BANK OF MADAGASCAR

[From Supplément Colonial De L'Economiste Européen, Paris, November 19, 1926]

The Bank of Madagascar, created by the law of December 22, 1925, was opened on February 5, 1926, and proceeded immediately to issue notes which are to be the new fiduciary currency of the country. On November 15, the total amount issued was 333,875,000 francs. The bank placed its notes in circulation on the occasion of its commercial operations as well as by exchanging the Bank of France notes circulating in the island. The amount of Bank of Madagascar notes in effective circulation at present is about 160,000,000 francs.

MOROCCO—FRENCH AND SPANISH

Approximate stock of silver coin and paper money in circulation on December 31, 1926: Silver Hassani coin circulating in Tangier and in the Spanish Zone of Morocco, 10,000,000 Hassani pesetas (\$1,930,000); Moroccan franc notes, 415,733,410 francs; Hassani peseta notes, 48,580 francs.

¹ Union of South Africa currency.

² In addition to this there is approximately £3,000 Union of South Africa notes in circulation, though forbidden by law.

Premium on gold in 1926: Highest, 80 per cent; lowest, 25 per cent; average, 51 per cent.

CURRENCY

At present there are three currencies in use in the province: the escudo and the libra (pound) are official—the British sovereign is in use although not permitted by law. The escudo is ordinarily about 100 to the libra bank note. The present fluctuations of the libra cause business to be transacted almost entirely on the basis of gold metal, which is a euphemism for British sterling. The agreement entered into between the Banco Nacional Ultramarino and the Government of Portugal, whereby the paper libras were to be retired, was later nullified.

CURRENCY REFORM

[From The Statist, London, September 25, 1926]

The unit so far in circulation (escudo Angolano) will be replaced by the "Angolar," which is divided into 100 centavos. The denomination "Macuta" will be applied to 5 centavos. The new currency unit corresponds to the parity of the Portuguese gold escudo (previously called milreis), weighing 1.8065 grams (0.900 fine). The exchange of "Escudo Angolano" into the new "Angolar" will be based on the average rate of exchange ruling during the months preceding the introduction of the new currency.

RHODESIA, NORTHERN

The quantity of gold and silver produced from deep mines during 1926 was as follows: Gold, 779 fine ounces, valued at £3,238 (\$15,758); silver 115 fine ounces, valued at £11 (\$54).

SOMALILAND, ITALIAN**MONETARY SYSTEM**

ROYAL DECREE OF JUNE 18, 1925, INTRODUCING INTO ITALIAN SOMALILAND THE MONETARY SYSTEM OF THE KINGDOM

ARTICLE 1. Beginning July 1, 1925, the Italian lira, with its multiples and sub-multiples, is the only legal tender currency of Italian Somaliland.

In addition to the subsidiary coins and notes of the Government and of the bank of issue there are established for the colony itself silver coins in denominations of 5 and 10 lire.

ARTICLE 2. The 5 and 10 lire coins weigh 12 and 6 grams, respectively.

ARTICLE 3. The tolerance in the weight of above coins shall be 30 milligrams for the 5-lire coin and 60 milligrams for the 10-lire coin.

ARTICLE 4. The fineness of above coins shall be 0.835 with a tolerance of 0.003.

ARTICLE 5. Beginning July 1, 1925, the Italian silver rupee, established by decree of December 8, 1910, the rupee notes of the Bank of Italy, authorized by decree of May 13, 1920, and the bronze coins (bese), established by decree of January 28, 1909, shall cease to be legal tender.

ARTICLE 6. Beginning July 1, 1927, the Mogadiscio (Somaliland) branch of the Bank of Italy shall receive, in payment or in exchange, its own rupee notes at the rate established by the decree.

ARTICLE 7. During the same interval the government of Italian Somaliland shall accept, at the fixed rate, payments in Italian rupees (silver and paper), and in bese (bronze) coins.

ARTICLE 8. After July 1, 1927, the Italian silver rupee, with its silver multiples and submultiples (half-rupee, quarter-rupee), shall be freely accepted in Italian Somaliland on the basis of its commercial value, like any other metal on the market.

NEW CURRENCY SYSTEM

[From Fifty-sixth Annual Report of the Deputy Master of the Royal British Mint]

Ten-lire and 5-lire pieces of special design were struck during the year for the Protectorate. The gold 100-lire pieces struck during the year were issued in commemoration of His Majesty's jubilee.

SUDAN, ANGLO-EGYPTIAN

The quantity of gold produced from deep mines during the year ended December 31, 1926, was 8,714 fine ounces, valued at £E31,339 (\$154,912).

¹ Foreign gold coin.

² Reported to the Director of the Mint in value only. Converted to fine ounces on basis of legal silver content of the coin and at the average price of silver in London.

³ Gold and silver.

⁴ Gold delivered by the Reichsbank.

WORLD'S MONETARY STOCKS OF GOLD, SILVER, AND PAPER MONEY AT THE CLOSE OF THE YEARS 1925 AND 1926

The following compilations have been made from such data as are available—avowedly incomplete. The amount of gold and silver in circulation in many countries is not obtainable, and in some countries that held by private banks can not be given.

For the United States the figures given cover all domestic gold and silver coin, but only such bullion and foreign coins as owned by the Government and Federal reserve banks. All foreign coin which comes into possession of the Government is converted into bullion.

Monetary stock of principal countries of the world, end of calendar year 1925

[Stated in United States money (000 omitted), except paper stock, which is stated in monetary unit of issuing country (000 omitted)]

¹ Includes gold and silver certificates (representing coin and bullion held in trust in the Treasury) redeemable on demand.

² Including some silver coin.

³ In Bank of Mexico.

⁴ Last year's figures.

⁵ Silver coin in circulation in April, 1926.

⁶ Fluctuates with the price of silver.

⁷ Stated in United States dollars and including \$800,000 in United States bills.

⁸ Government notes only.

⁹ Including minor coins.

¹⁰ Stated in francs.

¹¹ On June 30, 1926.

¹² Estimated.

¹³ Gold certificates, Nov. 30, 1925.

NOTE.—Figures given represent each country's stock at the end of the year, except when otherwise indicated. Population figures are from the Statistical Abstract of the United States, 1925. Banks indicate no figures available, rather than no stock. Gold held abroad as follows, not included in the above figures (presumably reported by the country having actual possession): Canada, \$18,772,373; Mexico, \$2,090,596; Chile, \$18,739,343; Peru, \$3,430,883; Estonia, \$2,563,274; France, \$359,813,935; Germany, \$23,010,358; Greece, \$4,825,000; Italy, \$80,867,000; Lithuania, \$3,054,347; Poland, \$10,598,209; Rumania, \$82,630,958; Spain, \$5,692,921; Switzerland, \$8,639,960; Japan, \$128,613,000; Straits Settlements, \$843,573; Morocco, \$15,247,000 (gold and silver); Union of South Africa, \$5,388,933 (gold and silver).

¹⁴ Stock in national bank.

¹⁵ Monetary standard not established.

¹⁶ New monetary unit established Dec. 21, 1925.

^{16a} Exclusive of Spanish Bank notes.

¹⁷ New monetary unit established Nov. 21, 1925.

¹⁸ On Jan. 1, 1926.

¹⁹ On Jan. 2, 1926.

²⁰ On Dec. 23, 1925.

²¹ Incomplete.

²² Exclusive of 1,277,780 pesos in United States Federal reserve bank notes.

²³ On June 30, 1925.

²⁴ There also circulate Portuguese pound notes to the amount of 838,252 pounds.

²⁵ Tunisian notes of the Bank of Algiers.

Monetary stock of principal countries of the world, end of calendar year 1926

[Stated in United States money (000 omitted), except paper stock, which is stated in monetary unit of issuing country (000 omitted)]

¹ Includes gold and silver certificates (representing coin and bullion held in trust in the Treasury) redeemable on demand.

- ² Including some silver.
- ³ Last year's figures or figures of previous years.
- ⁴ United States Government and bank notes.
- ⁵ Gold standard established Apr. 8, 1926.
- ⁶ Government notes only.
- ⁷ United States gold coin.
- ⁸ On June 30, 1926.
- ⁹ New monetary unit established Sept. 17, 1925.
- ¹⁰ Estimated.

NOTE.—Figures given represent each country's stock at the end of the year, except when otherwise indicated. Population figures are from the Statistical Abstract of the United States, 1925. Blanks indicate no figures available, rather than no stock. Gold held abroad as follows, not included in the above figures (presumably reported by the country having actual possession): Canada, \$27,962,178; Chile, \$56,591,470; Czechoslovakia, \$18,899,484 in gold and \$1,617,862 in silver; Estonia, \$2,663,516; Egypt, \$142,307; France, \$359,813,935; Germany, \$40,560,696; Greece, \$4,825,000; Japan, \$114,655,000; Lithuania, \$3,634,000; Rumania, \$82,630,958; Switzerland, \$14,276,596; Straits Settlements, \$41,637; Union of South Africa, \$2,538,279; Yugoslavia, \$11,316,748.

- ¹¹ Stock in national bank.
- ¹² Including minor coin.
- ¹³ Monetary standard not established.
- ¹⁴ Exclusive of Spanish bank notes.
- ¹⁵ Stock in Bank of Italy, sole bank of issue since July 1, 1926.
- ¹⁶ On Jan. 1, 1927.
- ¹⁷ Incomplete.
- ¹⁸ Fluctuates with the price of silver.
- ¹⁹ On Nov. 30, 1926.
- ²⁰ Union of South Africa coin.
- ²¹ In addition to this, there circulates about £3,000 Union of South Africa notes.

WORLD PRODUCTION OF GOLD AND SILVER

World production of gold and silver, 1925 and 1926

[The production figures given below are based upon the preceding data and those published in prior issues of the report of the Director of the Mint]

¹ Average price per fine ounce in London.
² Estimate based on United States imports of ore and bullion.
³ Estimate based on other years' production.
⁴ Amount exported.
⁵ Last year's figures.
⁶ Estimated on basis of production from Jan. 1 to Oct. 15, 1926.
⁷ For years ending June 30, 1925 and 1926, respectively.

Production of gold and silver in the world since 1860

[The annual production of 1860 to 1872 is obtained from 5-year-period estimates compiled by Dr. Adolph Soetbeer. Since 1872 the estimates are those of the Bureau of the Mint]

Calendar year	Gold		Silver	
	Fine ounces	Value	Fine ounces	Commercial value ¹

¹ At the average par price of a fine ounce of silver in London, excepting the years 1918 to 1922, inclusive, for which the mean of the New York bid and asked prices was used.

Production of gold and silver in the world since the discovery of America

From 1493 to 1885 is from a table of averages for certain periods, compiled by Dr. Adolph Soetbeer; for the years since, the production is the annual estimate of the Bureau of the Mint

Period	Gold			Silver			Percentage of production					
	Annual average for period		Total for period		Annual average for period		Total for period		By weight		By value	
	Fine ounces	Value	Fine ounces	Value	Fine ounces	Coining value	Fine ounces	Coining value in standard silver dollars	Gold	Silver	Gold	Silver

REPORT OF THE DIRECTOR ON THE OPERATIONS OF THE MINT SERVICE FOR THE FISCAL YEAR 1925

PART I

REPORT OF THE DIRECTOR ON THE OPERATIONS
OF THE MINT SERVICE FOR THE
FISCAL YEAR 1925

REPORT OF THE DIRECTOR OF THE MINT

TREASURY DEPARTMENT,
BUREAU OF THE MINT,
Washington, D. C., September 15, 1925.

SIR: In compliance with the provisions of section 345, Revised Statutes of the United States, I have the honor to submit herewith a report covering the operations of the mints and assay offices of the United States for the fiscal year ended June 30, 1925, being the fifty-third annual report of the Director of the Mint. There is also submitted for publication in connection therewith the annual report of this bureau upon the production and consumption of the precious metals in the United States for the calendar year 1924.

OPERATION OF THE MINTS AND ASSAY OFFICES

INSTITUTIONS OF THE MINT SERVICE

Eleven mint service institutions operated throughout the fiscal year ended June 30, 1925: Coinage mints at Philadelphia, San Francisco, and Denver; assay office at New York, which makes large sales of fine gold bars; mints at New Orleans and Carson City conducted as assay offices; and assay offices at Boise, Helena, Deadwood, Seattle, and Salt Lake City. The seven last-named institutions are, in effect, bullion-purchasing agencies for the large institutions, and also serve the public by making, at nominal charge, assays of ores and bullion. Electrolytic refineries are operated at the New York, Denver, and San Francisco institutions.

COINAGE

During the past fiscal year the output of domestic coin totaled 190,443,558 pieces, as compared with 262,178,080 pieces during the prior fiscal year. The requirement for coins below the dollar was materially less, permitting increase of the stock of gold double eagles as well as a larger coinage of silver dollars from bullion purchased under the act of April 23, 1918. Gold coins were made at all three of the coinage mints, Philadelphia, San Francisco, and Denver, to a total value of \$250,335,000. Silver dollars were made at Philadelphia and San Francisco to a total value of \$18,308,000. The value of the subsidiary silver coin executed totaled \$8,221,404, and minor coin \$1,746,540, giving a total value of domestic coinage executed of \$278,610,944, as compared with \$180,088,460 for the prior fiscal year. Coin for foreign governments made at the Philadelphia Mint totaled 8,223,000 pieces for the Governments of Poland, Peru, Guatemala, and Venezuela, and at the San Francisco Mint

4,500,000 pieces for Salvador, giving a total number of pieces for foreign governments of 12,723,000. The grand total of pieces executed during the year was 203,166,558, which compares with the total during the prior fiscal year of 271,810,276 pieces.

GOLD OPERATIONS

Gold acquired by the Government at the several mint service institutions during the fiscal year 1925 totaled \$211,053,392.16. United States gold coin received by the mints for recoinage amounted to \$1,812,397.95; transfers of gold between mint offices totaled \$12,815,552.16; and the aggregate amount of gold received by the several mint service institutions during the fiscal year 1925 was \$225,681,342.27.

SILVER OPERATIONS

Receipts of purchased silver during the fiscal year 1925 totaled 3,325,201.78 fine ounces, of which 298,159.77 fine ounces were Pittman Act silver, costing \$1 per ounce. The average cost of other purchased silver was 68 cents per ounce, total cost being \$2,058,520.67 for 3,027,042.01 fine ounces. Silver received in exchange for bars bearing the Government stamp totaled 1,481,747.75 fine ounces; United States silver coin received for recoinage totaled 1,764,223.72 fine ounces, the recoinage value being \$2,438,452.07; silver deposited in trust by other governments totaled 2,515,635.23 fine ounces; and transfers between mint service offices totaled 1,334,103.53 fine ounces, making the aggregate quantity of silver received by the several mint service offices during the fiscal year 10,420,912.01 fine ounces.

Deliveries of silver purchased under the act of April 23, 1918, were completed on or before October 1, 1924. Approximately 18,000,000 silver dollars remain to be coined from the silver purchased under this act.

The New York market price of silver during the fiscal year ended June 30, 1925, averaged \$0.68813; the lowest price was \$0.66125, on July 1, 1924; and the highest price \$0.72375, on October 9, 1924.

REFINERIES

The three refineries—at New York, San Francisco, and Denver—were in operation throughout the year, reducing the large quantities of unparted and unrefined bars into usable gold and silver bullion.

Production of electrolytically refined gold totaled during the past fiscal year 3,319,076 ounces, as compared with 3,925,962 ounces during the fiscal year 1924. Electrolytically refined silver totaled 5,293,985 ounces, as compared with 6,616,817 ounces during the fiscal year 1924.

COMMEMORATIVE COINS AND MEDALS

The last session of Congress authorized the issue of six commemorative coins—one quarter eagle and five silver half dollars. The issue of a commemorative silver medal was also authorized. Since 1914 the authorizations of commemorative coins have included 6 gold coins

1

2

3

1. MEMORIAL HALF DOLLAR—STONE MOUNTAIN
2. MEMORIAL HALF DOLLAR—LEXINGTON-CONCORD SESQUICENTENNIAL
3. MEMORIAL MEDAL—NORSE-AMERICAN CENTENNIAL

and 15 silver half dollars. Further information concerning the occasions commemorated by these coins may be had by referring to pages 86 and 126 of this volume. Commemorative coins have become so numerous that the interest of the general public in them appears to be comparatively small. The quantities authorized by Congress are seldom made, and of those actually made considerable quantities are returned to the mints for melting because the organizations having in charge their distribution are unable to dispose of them. Numerous issues of commemorative or "souvenir" coins also have a tendency to add to the difficulties of maintaining the integrity of the circulating medium.

Two commemorative coins and one medal were issued during the year under review, as follows:

The Stone Mountain half dollar was issued in commemoration of the commencement of the work of carving on Stone Mountain, in the State of Georgia, a monument to the valor of the soldiers of the South. The obverse of the coin shows equestrian figures of Gen. Robert E. Lee and Gen. Thomas J. (Stonewall) Jackson reviewing the Confederate armies. The motto, "In God We Trust" appears at the top of the coin, and to the left the legend "Stone Mountain, 1925." The reverse bears an eagle, emblematic of liberty, poised on a mountain crag, with a background of stars dimly visible, together with the inscriptions "United States of America," "E Pluribus Unum," and the denomination of the coin. Five millions of these pieces were authorized. The design is the work of Gutzon Borglum.

The Lexington-Concord half dollar was issued in commemoration of the one hundred and fiftieth anniversary of the Battle of Lexington and Concord. The obverse of the coin shows a figure of the Minute Man. The motto "In God We Trust" with other usual legends appears on the obverse. At the base of the obverse of the coin the words "Patriot Half Dollar" appear. The device used on the reverse is a representation of the old belfry at Lexington, with the inscription "Lexington-Concord Sesquicentennial, 1775-1925." Three hundred thousand of these pieces were authorized. The designs were executed by Chester Beach.

The Norse-American medal, issued in lieu of a coin, is commemorative of the arrival in the United States of the first shipload of Norse immigrants. The obverse bears the figure of a Norseman stepping ashore on the American Continent. In the background appears a Viking ship, and above the inscription "Norse-American Centennial 1825-1925." The reverse shows a viking ship in full sail. Above the inscription "Authorized by Congress of the United States of America" appears, and below the inscription "A. D. 1000," which is the year in which the Norsemen are supposed to have landed on the mainland of America. The medal is executed in silver and is octagonal in form. The issue of 40,000 medals was authorized by Congress. The design was executed by James E. Fraser.

STOCK OF COIN AND MONETARY BULLION IN THE UNITED STATES

On June 30, 1925, the estimated stock of domestic coin in the United States was \$2,025,682,976, of which \$1,220,149,927 was gold, \$522,061,078 standard silver dollars, and \$283,471,971 subsidiary silver coin.

The stock of gold bullion in the mints, assay offices, and Federal reserve banks on the same date was valued at \$3,166,045,914, a reduction during the year of \$241,707,562; the stock of silver bullion was 17,620,761.18 fine ounces, a reduction of 15,034,311.06 fine ounces.

PRODUCTION OF GOLD AND SILVER

Domestic gold production during the calendar year 1924 exceeded that of the four prior years, the total being \$52,277,000, as compared with \$51,734,000 in 1923. The output continues at approximately half of that for the record year 1915, when the total was \$101,035,700.

Silver of domestic production during 1924 totaled 65,407,186 fine ounces, valued at \$43,822,814; this compares with 73,335,170 fine ounces, valued at \$60,134,839, for 1923, and with the record production of 1915, 74,961,075 fine ounces, valued at \$37,397,300.

INDUSTRIAL CONSUMPTION OF GOLD AND SILVER

Gold consumed in the industrial arts during the calendar year 1924 is estimated at \$65,887,851, of which \$37,913,310 was new material.

Silver used in the arts is estimated at 33,594,816 fine ounces, of which 24,664,236 fine ounces was new material.

As compared with the prior year, gold consumption decreased about \$3,400,000 and silver consumption decreased about 3,200,000 ounces.

IMPORT AND EXPORT OF DOMESTIC GOLD COIN

The net export of domestic gold coin during the fiscal year ended June 30, 1925, was \$107,910,658; during the prior fiscal year there was net import of \$19,183,640. During the 11 fiscal years 1915-1925, since the opening of the World War, there has been a net export of \$889,103,715. Since 1870 the net export of domestic gold coin has been \$1,766,752,779 as per tabulation by fiscal years, which may be found in another section of this publication.

APPROPRIATIONS, EXPENSES, AND INCOME

Appropriations available for mint service during the fiscal year 1925 totaled \$1,692,853 and reimbursements to appropriations for services rendered amounted to \$165,954.39, making a total of \$1,858,807.39.

Expenses amounted to \$1,846,646.36, of which \$1,815,611.13 were chargeable to appropriations and \$31,035.23 chargeable to income.

The income realized by the Treasury from the mint service aggregated \$9,108,120.73, of which \$8,168,849.96 was seigniorage. The seigniorage included \$4,142,765.86 on the coinage of silver dollars, which amount offsets an equal loss which was incurred when the silver dollars were melted and sold under terms of the Pittman Act. The seigniorage on subsidiary silver coin was \$2,897,262.31; on nickel coin, \$392,103.39; and on bronze coin, \$736,718.40.

Summary of appropriations, expenses, and balances, fiscal year 1925

Items	Salaries	Wages	Contingent expenses	Freight on bullion	Total
Appropriations					
Earnings credited to appropriations	\$307,660.00	\$1,054,203.00	\$325,990.00	\$5,000.00	\$1,692,853.00
		120,005.20	45,949.19		165,954.39
Total available	307,660.00	1,174,208.20	371,939.19	5,000.00	1,858,807.39
Expenses	296,820.36	1,156,566.64	357,351.54	4,872.59	1,815,611.13
Unexpended balances	10,839.64	17,641.56	14,587.65	127.41	43,196.26

DEPOSITS OF GOLD AND SILVER, INCOME, EXPENSES, AND EMPLOYEES,
BY INSTITUTIONS, FISCAL YEAR 1925

The number and value of deposits, transfers, gross income, and expenses for the fiscal year 1925, and the number of employees on June 30, 1925, at each institution, are shown in the following table:

Institutions	Number of deposits of gold and silver	Number of mint service transfers	Coining value of gold and silver received ¹	Gross income	Gross expense	Excess of income (+) or of expenses (-)	Employees June 30, 1925

PURCHASE OF MINOR COINAGE METAL FOR USE IN DOMESTIC COINAGE

During the fiscal year 1925 there were purchased at the mint at Philadelphia 10,451,878.49 troy ounces of minor coinage metals at a cost of \$170,953.59, which includes 2,635,871.88 troy ounces in nickel blanks prepared for stamping, costing \$91,605.63.

There were also purchased during the same period at the mint at San Francisco 1,857,763.51 troy ounces of minor coinage metals at a cost of \$22,755.69. The Denver Mint purchased 1,166,725 troy ounces of copper for use in minor coinage, costing \$12,740.64.

MINOR COIN DISTRIBUTION COSTS

The minor coinage distribution costs paid during the fiscal year 1925 from the profits on minor coinage amounted to \$30,161.63.

MINOR COINS OUTSTANDING

The following statement shows the coinage of minor coins, by denominations, the amount on hand, issued, melted, and outstanding June 30, 1925. Minor coins were first manufactured at the Philadelphia Mint in 1793; at the San Francisco Mint in 1908; at the Denver Mint in 1911.

Denominations	Coined	On hand	Issued (net)	Melted	Amount issued and outstanding June 30, 1925
Philadelphia:					
Copper cents	\$1,562,887.44		\$1,562,887.44	\$382,558.17	\$1,180,329.27

PROOF BULLION (1.000 FINE)

In order to establish uniformity in assay of bullion in the offices of the mint service all proof gold and proof silver is made at the mint at Philadelphia and furnished to other offices when required.

The amount made during the fiscal year 1925 was: Gold, 678 ounces; silver, 600 ounces.

OPERATIONS OF THE MELTING AND REFINING AND OF THE COINING DEPARTMENTS, FISCAL YEAR 1925

The aggregate quantity of metals operated upon in the above-mentioned departments of the coinage mints and assay office at New York during the fiscal year ended June 30, 1925, was 64.82 million fine ounces of gold and 96.49 million fine ounces of silver. There were also operated upon at the coinage mints 38.81 million ounces of minor coinage metal. The figures in the table following are based on the figures obtained at the settlements of the accounts.

Legal limits of wastage on the whole amount delivered by the superintendent to operative officers, as prescribed in section 3542, Revised Statutes, are as follows: Melter and refiner—gold, 0.001; silver, 0.0015; coiner—gold, 0.0005; silver, 0.001.

GOLD BULLION

Institution and department	Amount received	Amount returned	Amount operated upon, including reworked metal	Legal amount of wastage on amount received	Surplus recovered	Wastage	Wastage per 1,000 ounces operated upon

REFINING OPERATIONS

The net product of electrolytically refined gold and silver of the mint service during the fiscal year 1925 was 8,613,061.003 fine ounces; other electrolytic output included the equivalent of the refined metals used for aiding the processes, 1,625,735.323 fine ounces; the product of melting operations (only) totaled 2,379,086.064 ounces, making the total output of the refineries 12,617,882.39 fine ounces. Details are shown in the following table:

Items	San Francisco		Denver

BULLION GAINS AND LOSSES

The net gains from operations on gold and silver bullion during the fiscal year 1925 amounted to \$278,508.08, as follows:

Item	Mint at—			Assay office at New York	Minor assay offices	Total
	Philadel-phia	San Fran-cisco	Denver			
Recovered from refining and coining operations	\$10,841.25	\$7,758.13	\$8,341.13	\$4,415.06		\$31,355.57
Recovered incident to receipt of deposits	1,882.03	2,034.17	3,377.83	50,985.03	\$848.71	59,127.77
Net gain on shipments to Government refineries					187.99	187.99
Gain on lightweight and mutilated coin purchased for recoinage	49.01	54.81	47.39	50.43		201.64
Receipts from sale of by-products		45,304.75	5,573.20	164,957.90		215,835.85
Total gains	12,772.29	55,151.86	17,339.55	220,408.42	1,036.70	306,708.82
Wasted in refining and coining operations	13,468.58	1,314.57	842.34			15,625.49
Loss on assay value of operative sweeps sold	3,846.64	1,670.30	3,219.74	3,838.57		12,575.25
Total losses	17,315.22	2,984.87	4,062.08	3,838.57		28,200.74
Net gains		52,166.99	13,277.47	216,569.85	1,036.70	278,508.08
Net losses	4,542.93					

WASTAGE AND LOSS ON SALE OF SWEEPS

The value of metals wasted in the operative departments during the fiscal year ended June 30, 1925, was \$16,539.45. A loss of \$12,575.25 occurred from the difference between the assay value of the bullion contained in sweeps sold and the amount received for the same. Details are given in the table following.

Items	Mint at—			Assay office at New York	Total
	Philadel- phia	San Fran- cisco	Denver		
Gold wastage:					
Melting and refining department	\$10,246.22				\$10,246.22
Coining department	559.26	\$921.07	\$106.81		1,587.14
Silver wastage:					
Melting and refining department			649.51		649.51
Coining department	2,663.10	393.50	86.02		3,142.62
Nickel wastage:					
Melting and refining department	107.18	31.82	9.72		148.72
Coining department	84.41	31.99	1.03		117.43

ENGRAVING DEPARTMENT

Mr. George T. Morgan, connected with the engraving department of the mint service since 1876, and who was commissioned engraver in 1917, died January 4, 1925, and has been succeeded by Mr. John R. Sinnock.

During the fiscal year ended June 30, 1925, the engraving department made 2,903 working dies for domestic coinage, including those for the half dollars issued in commemoration of the Stone Mountain memorial and of the Battle of Lexington and Concord. Master dies, hubs, and working dies were made for Philippine, Polish, Venezuelan, Guatemalan, Peruvian, and Salvadorean coinage.

LABORATORY, BUREAU OF THE MINT

From the domestic coinage of the calendar year 1924 the assayer of this bureau tested 462 gold coins and 502 silver coins, all of which were found within the legal requirements as to weight and fineness.

The greatest deviation in fineness of gold coins from standard (the limit of tolerance being one one-thousandth above or below) was 0.6 one-thousandth above and 0.5 one-thousandth below.

The greatest deviation in fineness of silver coins above standard (the limit of tolerance being 3 one-thousandths above or below) was 0.7 one-thousandth, while the greatest deviation below was 0.9 one-thousandth.

The following table summarizes results of fineness tests on domestic coin:

Fineness (thousandths)	Number of gold coins				Number of silver coins			
	Phila- delphia	Denver	San Fran- cisco	Total	Phila- delphia	San Fran- cisco	Denver	Total
899.1					4			4
899.3					19	4	2	25
